EDUCATION

University of Minnesota Twin Cities

- B.S. - Computer Science
- Sep 2020 - May 2024
- Minneapolis, MN

SKILLS

Programming Languages:

- Python
- C/C++
- Java
- JavaScript
- HTML5
- CSS
- SQL
(Oracle/MySQL/Postgres)
- NoSQL (MongoDB)

Frameworks/Libraries:

- React
- Node.js
- Express.js
- Flask
- jQuery
- Bootstrap
- Auth0
- REST APIs

Other:

- SAFe Agile (ART)
- Data Structures & Algorithms
- Operating Systems
- Git/GitHub
- SonarQube
- Jira
- AWS S3

WORK EXPERIENCE

CIBO Technologies - Minnetonka, MN

Dec 2024 – Apr 2025

Software Engineer, Backend

- Contributed new features to the backend of CIBO's primary web application, supporting data management for over 10 million acres of farmland and powering an incentive engine for regenerative agriculture programs.
- Developed backend services in Java, wrote unit tests in Groovy/Spock covering new features, improved the administrative front-end written in TypeScript and React.
- Championed code quality initiatives by implementing Javadoc-style documentation, integrating SonarQube static analysis, and applying refactoring best practices such as inversion of control and method extraction.
- Collaborated with the Operations team to deliver new product features and client-specific configurations, reducing time to product release by 30%.

University of Minnesota - Minneapolis, MN

May 2022 – Sep 2024

Student IT Developer

Aug 2023 – Sep 2024

- Improved existing scripts, increasing functionality by 100% and adding automation, reducing manual operations.
- Engineered IP address management solutions utilizing EfficientIP's REST API and Python scripting. These scripts automated the allocation, tracking, and maintenance of IP addresses across our network infrastructure.
- Utilized SAFe Agile development to improve the efficiency and quality of the software development process.

Help Desk

May 2022 – May 2023

- Applied intuition and analysis to deliver exceptional customer service, resolving complex issues efficiently and effectively at the help desk, reducing resolution time by 20%.
- Streamlined processes that significantly enhanced operational efficiency and overall service delivery.

PROJECTS

Web Application - Full Stack

Mar 2024 – Apr 2024

Tech Stack: React.js, Microsoft Azure, MongoDB, Sass

- Built TimeGo, a web application for time tracking and visualization. Users track activities and generate insightful graphs for daily, weekly, and monthly analysis, promoting productivity for the users.

Website - Full Stack

Jan 2024 – Feb 2024

Tech Stack: Flask, PureCSS, Jinja, HTML5, CSS, JavaScript, Python, Postgres DB

- Led the development of a club and organization website with a 5-person team. The site utilizes API integrations with AWS S3, Auth0, and Weavy Chat API.
- Leveraged a Postgres database and hosted it on Render.com for scalability.

Shader Program

Sep 2023 – Dec 2023

- Developed a shader program using GopherGfx Library and TypeScript, enabling real-time rendering with 4 shading techniques, Gouraud, Phong, Toon, and Normal Map.

Drone Simulation Project - C++

Sep 2022 – Dec 2022

- Collaborated with a 4-person team to develop a drone pathing simulation program.
- Implemented a wear-and-tear mechanic for the drone. This mechanic dynamically changes the drone's color based on its condition. As a result, the drone's lifespan is extended by 30%.
- Programmed the drone to automatically path to a designated repair station upon reaching a critical wear threshold.
