SUMMARY

With an MS in CS and nearly 5 years of software engineering experience, leveraging Java, Spring Boot, PostgreSQL, Microservices Architecture, RabbitMQ, Redis, Kafka, JavaScript, etc to solve complex problems and deliver scalable solutions.

EDUCATION

Master's in Computer Science, University at Buffalo, Buffalo, NY

Aug 2023 - Dec 2024

Bachelor's in Electrical and Electronics Engineering, National Institute of Technology, Calicut, India

Jun 2015 – Apr 2019

PROFESSIONAL EXPERIENCE(4 Years)

Software Engineer, Talentica - Pune, India

Sep 2022 – Jul 2023

- Played a key role in developing Emtech's web platform, automating compliance and agreements between FSPs and central banks, streamlining regulatory reporting, and enhancing security and performance through key integrations
- Implemented Azure Key Vault to enhance application security, reducing the risk of potential vulnerabilities by 25%
- Led the design and development of a payment module for the application integrated with STRIPE, executed smooth data migration using flyway scripts, and received the [Pat On The Back Award](#) for successful delivery
- Integrated Apache Kafka to consume Stripe webhook events, enabling asynchronous processing of payment updates
- Revamped the Legacy Notification System, improving delivery accuracy by 20% and adding Email and SMS alerts
- Integrated Azure Media Services for seamless streaming of videos and documents on application dashboards
- Optimized dashboard performance by refactoring pagination with Indexing, Limit-Offset, and Lazy Loading for faster loads
- Leveraged Redis Cache to significantly boost performance, reducing database load by caching high-demand data

Software Engineer, Tavant – Bangalore, India

Dec 2019 – Sep 2022

- Completed a full-stack developer program, specializing in Java, Spring Boot, PostgreSQL, and Angular. Contributed to Bug fixing, REST API design, and development at MGIC, improving system reliability and performance
- Collaborated with managers from cross-functional teams, including QAs, BAs, to design and implement scalable solutions
- Integrated Spring Cloud Stream with RabbitMQ for async processing, offloading tasks to boost system performance
- Demonstrated commitment to test-driven development, maintaining Jacoco test coverage consistently above 85%
- Enhanced API security by integrating JWT tokens with Spring Security filters, restricting unauthorized access
- Engineered SQL scripts for critical database updates in production, resolving high-priority issues impacting real users
- Utilised SSH File Transfer Protocol (SFTP) for efficient file storage and download operations on AWS S3
- Conducted security vulnerability scans with Fortify and Rapid7, identified and remediated flaws reducing potential risks
- Resolved client incidents using ServiceNow, ensuring timely resolution, minimizing downtime & preventing escalations

Java Developer Intern, NII Tech – Bangalore, India

Mar 2019 – Dec 2019

- Assisted in developing and debugging Java-based applications using Spring Boot and REST APIs, troubleshooting issues, and documenting them while gaining hands-on experience in unit testing with JUnit and Mockito

PROJECTS

Text Chat Application:

- Developed a text chat application utilizing socket programming, featuring a server-client model where one node acts as the server listening on a specific IP address and port, facilitating real-time communication with client nodes over a network.

Customer Churn Predictor:

- Developed a backend system using Python and Node.js for data cleaning, exploratory analysis, and Churn Prediction, which included REST APIs to deliver insights and visualizations to an Angular frontend in real-time.

QDoc:

- Designed and developed a scalable Doctor Appointment Booking Platform using Java, Spring Boot, Angular, and PostgreSQL, integrating caching for responsiveness, secure authentication, and automated notifications to enhance booking management, real-time slot availability, and user experience.

SKILLS

Languages: C, C++, Java, Python, HTML, CSS, MySQL, PostgreSQL, MongoDB, JavaScript, Express, NodeJS, React.

Frameworks and Tools: Spring Boot, Hibernate, Spring Data JPA, Spring security, Spring Cloud Stream, RabbitMQ, Kafka, Redis, Hadoop, Spark, PostMan, Splunk, DataDog, AppDynamics, SoftWorks AI, Mockito, Jackson, JWT tokens.

Functional: Agile Environment, SDLC, Jira, BDD, Version Control, Debugging, Scrum, Git, Unit Testing

Other Technical Skills: AWS, Azure, Microservice Architecture, Multithreading, REST APIs, Data Cleaning, EDA, Visualization

CERTIFICATIONS AND ACHIEVEMENTS

- AWS Certified Cloud Practitioner
- Won 3 professional awards, highlighting consistent performance and valuable contributions.
