

Nikhil Chagi

Data Analyst

Location: Denton, Texas | Mail: nikhilchagi18@gmail.com | Ph: +1 (254) 978-5668 | [LinkedIn](#)

PROFESSIONAL SUMMARY:

Data Analyst with 4 years of experience driving data initiatives in the banking, finance, and healthcare sectors. Specialized in building end-to-end ETL pipelines, developing predictive risk models, and delivering data-driven insights using Python (PySpark, XGBoost), SQL, and Power BI. Experienced in cloud platforms including AWS and GCP for scalable data processing and warehousing. Strong background in regulatory compliance (IFRS 9, Basel III, HIPAA), financial reporting automation, and advanced customer segmentation. Adept at collaborating with cross-functional teams to translate complex data into strategic decisions that enhance compliance, reduce risk, and optimize performance.

TECHNICAL SKILLS:

Programming Languages:	Python(Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL, VBA, R, JS
Data Processing & ETL:	Apache Spark (PySpark), Apache Airflow, Talend, SQL Server, Snowflake, Amazon Redshift, Google Big Query, Stitch
Data Visualization:	Tableau, Power BI, D3.js, Excel (Power Pivot, Power Query), Looker, Google Data Studio
Machine Learning & AI:	Scikit-learn, TensorFlow, Keras, XGBoost, PyCaret, Isolation Forest, ARIMA, Prophet, LightGBM, CatBoost
Big Data & Cloud:	Azure Synapse Analytics, AWS, GCP, Azure Data Lake
Domain Standards:	FHIR, HL7, EHR, EMR (Epic, Cerner), SWIFT, ISO 20022, FIX Protocol
Compliance & Regulations:	HIPAA, AML, KYC, Basel III, IFRS 9, GDPR, SOX, PCI DSS
Data Analysis & Statistics:	SAS, EDA, A/B Testing, Cohort Analysis, Time Series, Risk Modeling
Automation & Scripting:	Excel VBA, SQL Automation, Zapier , GoogleApp Script
Version Control:	Git, GitHub, GitLab
Operating Systems:	Windows, Linux, Mac iOS
Other Skills:	Jupyter Notebook, Ggplot, Data Wrangling, Data Modeling, Data Cleaning, Forecasting, Customer Segmentation, CLTV Modeling

JP Morgan Chase – TX, USA | Data Analyst | August 2024 – Present

- Designed and maintained ETL pipelines using Apache Spark (PySpark) and Talend to process high-volume transactional and customer financial data from core banking systems.
- Conducted risk modeling and time series forecasting for credit risk and loan default probabilities using XGBoost and ARIMA, enhancing portfolio risk insights.
- Built dynamic, interactive Power BI dashboards to visualize key financial KPIs, improving executive reporting efficiency by 35%.
- Deployed analytical solutions on AWS, leveraging Amazon Redshift for large-scale data warehousing and high-performance querying.
- Automated monthly financial reporting workflows using SQL automation and Excel VBA, reducing manual errors and report delivery time by 40%.
- Performed A/B testing and cohort analysis on investment product campaigns to optimize customer acquisition and retention strategies.
- Integrated financial datasets from SQL Server and Snowflake, ensuring a single source of truth for compliance reporting and audits.
- Collaborated with finance teams to implement IFRS 9 and Basel III standards in credit exposure calculations and provisioning models.
- Developed customer segmentation models using Keras and Scikit-learn, improving personalized cross-sell strategies across retail banking.
- Used GitHub and Git for version control of analytical scripts, ensuring collaboration and reproducibility across the data team.

HCL Tech – India | Data Analyst | June 2020 – July 2023

- Designed and maintained HIPAA-compliant data pipelines using Google BigQuery to ingest EHR data from Epic and Cerner, enabling real-time clinical insights.
- Built interactive dashboards in Tableau to visualize trends in hospital readmissions and emergency visits, improving decision-making for care coordination.
- Integrated patient records using FHIR and HL7 standards to ensure interoperability and enhance cross-departmental data exchange.
- Conducted exploratory data analysis (EDA) on chronic disease cohorts to identify risk patterns and inform personalized treatment strategies.
- Developed predictive models using Scikit-learn and XGBoost on GCP-hosted data to detect early signs of cardiac complications.
- Applied Prophet for time series forecasting of outpatient appointment demand, optimizing staff scheduling and resource allocation.
- Automated clinical and operational reporting using SQL and Google Apps Script, reducing manual effort by 40% and increasing report accuracy.
- Built risk stratification models in R to monitor high-risk post-surgical patients, reducing hospital-acquired infections by 18%.
- Segmented patients using LightGBM to tailor preventive care communications and increase engagement in wellness programs.

Education:

Master's in Advanced Data Analytics - University of North Texas, Denton, Texas.

Bachelors of Computer Science Engineering - Gitam University, Hyderabad.

CERTIFICATIONS:

Certified in Data science with python in Dhyanahitha org.

Certified by Coursera in ML and data visualizations and cloud courses.
