SUMMARY

Full-stack engineer with 4+ years designing, developing, and deploying secure, high-availability web applications. Expert in Java 17 / Spring Boot and modern Angular front-ends on AWS; earlier success modernizing monoliths into Node.js & React.js micro-front-end architectures. Track record of boosting performance 30-50%, automating CI/CD release pipelines, and guiding cross-functional Agile teams across finance, logistics, and risk-analytics domains.

SKILLS

Languages & Frameworks: Java 17, JavaScript/TypeScript, Spring Boot, Spring Cloud, Angular 16, Node.js (Express), React 18, JSP/Servlets.
Cloud & DevOps: AWS (EC2, ECS, Fargate, Lambda, RDS, S3), Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, SonarQube
Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis.
Messaging & Streaming: Apache Kafka, RabbitMQ, BullMQ.
Testing & QA: JUnit, Mockito, Jest, Cypress, Selenium WebDriver, Postman, Swagger / OpenAPI.
Practices & Tools: REST / GraphQL APIs, Microservices, TDD, CI/CD, Agile (Scrum / Kanban), JIRA, Confluence

EXPERIENCE

- Senior Full-Stack Engineer , CITI GROUP — Florida, USA

Jul 2024 – Present

 - Architected 10+ microservices with Java 17 & Spring Boot 3, secured via OAuth 2.0/JWT, processing 50 K+ transactions/day.
 - Built a reusable Angular component library (NgRx, RxJS) that cut page load time 30% and reduced UI defects 40%.
 - Integrated AWS Textract with custom transformer models to automate metadata tagging for 100K+ documents, improving accuracy by 30%.
 - Automated blue-green deployments on AWS ECS using Docker & Terraform, achieving < 15min zero downtime releases
 - Integrated Kafka streams for real-time risk analytics; optimized back-pressure handling, boosting throughput 25%
 - Enforced quality gates with SonarQube and raised test coverage to 90%+ through JUnit & Cypress suites.
- Full-Stack Developer Intern , CITI GROUP — Florida, USA

Jan 2024 – May 2024

 - Delivered a KPI monitoring dashboard with Angular, Spring MVC, and AWS RDS, eliminating 60% manual reporting.
 - Authored Swagger docs for 10+ endpoints, cutting QA hand-off time 50%.
 - Implemented GitHub Actions pipeline with static analysis and unit tests, accelerating PR feedback loops 40%.
 - Collaborated across risk, security, and compliance pods to align deliverables with Citi’s regulatory standards.
- Full-Stack Developer (Node.js, React.js) , Kalp Technolab — Hyderabad, India

Aug 2021 – Jul 2022

 - Re-platformed logistics SaaS from JSP to Node.js REST APIs and React SPA, trimming page latency 40%.
 - Containerized workloads on AWS Fargate and introduced Jenkins CI/CD, shrinking deployment time 70%.
 - Tuned MongoDB indices and Redis caching, tripling dashboard load speed.
 - Implemented role-based access & JWT auth, passing third-party security audit with zero critical findings.
 - Mentored two junior developers on React best practices and code review process.
- Full-Stack Developer (Node.js, React.js) , Cybage Software — Hyderabad, India

Jan 2020 – Jul 2021

 - Rewrote a monolithic Java app into Express microservices, reducing average response time 35%.
 - Engineered React dashboards with Redux & Material-UI for risk analytics on 1 M+ accounts.
 - Designed asynchronous job orchestration with BullMQ & Redis, cutting reconciliation cycle 25%.
 - Built CI/CD pipeline (Jenkins + GitHub Actions) with Jest & Cypress, doubling deployment frequency while sustaining 90% coverage.
 - Optimized PostgreSQL analytical queries and implemented caching layers, doubling BI query performance.

EDUCATION

University of South Florida, Tampa, FL: M.S. Business Analytics & Information Systems
Guru Nanak Institute of Technical Campus, India: B.Tech. in Mechanical Engineering
