

NIKHIL SAI DANDAMUDI

Orlando, FL | 317-717-2354 | dnsai25@gmail.com

PROFILE

Software Engineer with over 2 years of experience working on scalable applications and backend systems using C++, Java, Python, and SQL, with practical exposure to data structures and algorithms, system performance tuning, and distributed system development. Experienced in analyzing large data sets, optimizing queries, and improving application performance in production environments. Hands-on with LLMs, ML frameworks (TensorFlow, PyTorch), and simulation techniques applied to backend systems. Comfortable working in Agile teams and collaborating across functions to deliver solutions that are both reliable and efficient.

TECHNICAL SKILLS

- Languages: C++, Java, Python, C, SQL, Bash
- Backend: Spring Boot, Spring MVC, Hibernate, RESTful APIs
- Web: JavaScript, React.js, Node.js, TypeScript, HTML, CSS
- Databases: MySQL, PostgreSQL, MongoDB, SQLite, PL/SQL
- Cloud & DevOps: AWS (EC2, S3, Lambda), Azure, Docker, Jenkins, Kubernetes, Maven, CI/CD
- Testing: JUnit, Selenium, Functional and Regression Testing, Performance Analysis
- Data & ML Tools: Python (Pandas, NumPy), Tableau, Jupyter Notebook, TensorFlow, PyTorch
- Tools & OS: Git, Jira, Slack, Linux, Unix
- Concepts: Data Structures, Algorithms, Computer Architecture, Agile, SRE concepts

PROFESSIONAL EXPERIENCE

Software Engineer

Forman Tech Group LLC | Remote | Apr 2025 – Present

- Built backend services and automation utilities in Python, helping client projects improve how data is processed and managed across different applications.
- Designed Python APIs that connected to enterprise platforms, making it easier for different systems to share information and reducing manual work.
- Automated daily workflows using Python scripts, saving manual effort and increasing team productivity on client tasks.
- Worked in Agile sprints and collaborated with developers and testers while using Git for version control and Jira for project tracking.

Software Engineer

Frontier Science Foundation | Remote | Nov 2024 – Apr 2025

- Worked on clinical trial applications using Java/JEE, Spring Boot, SQL, and ColdFusion, where query tuning and code optimization helped reduce delays by 25%.
- Created internal tools in Python and Java that processed large volumes of trial data, improving throughput by about 20% and supporting the research teams.

- Applied data structures and algorithms such as hash maps, trees, and indexing methods to make query handling more efficient when working with large datasets.
- Used Python ML libraries like scikit-learn and TensorFlow to experiment with models for flagging unusual clinical data, which supported faster quality checks.
- Worked with cross-functional researchers and engineers to ensure systems stayed efficient and scalable as requirements evolved.

Full Stack Developer

Hoosier Community Network | Bloomington, IN | Jul 2024 – Nov 2024

- Designed and built a data visualization dashboard in React.js and Node.js with MongoDB, helping state clients review real-time insights more effectively.
- Implemented dynamic filtering and categorization features, which improved how quickly users could retrieve and analyze data by about 40%.
- Set up deployments on AWS EC2 and S3, giving the platform high availability and ensuring reliability for production environments.
- Created APIs for analytics pipelines that handled compute-intensive requests, keeping response times consistent and user experience smooth.

Software Developer

DarwinBox | Hyderabad, India | Jan 2020 – Aug 2022

- Built an HR Administration System with Java, Spring Boot, Spring MVC, and MySQL, managing over 10K employee records with secure access controls.
- Designed database schemas and optimized queries and indexes that reduced response times by 45% under heavy load.
- Developed RESTful APIs for managing employee data and access, making it easier to integrate with other HR modules.
- Added a proof-of-concept LLM-powered feature that let users type natural language queries, which were converted into SQL to fetch data more easily.
- Used data structures and algorithms like trees, caching, and indexing to keep backend performance fast and scalable.
- Improved the speed and reliability of ML workflows by working on preprocessing steps and inference logic so responses were delivered faster.
- Explored ML frameworks (TensorFlow, PyTorch) to build small models for HR analytics, testing them in different environments.
- Participated in Agile sprints and used Git workflows for team collaboration, which improved delivery timelines and reduced integration conflicts.

EDUCATION

Master of Science, Computer Science (CGPA : 3.90)

Indiana University Bloomington – Luddy School of Informatics, Computing, and Engineering

Bachelor of Engineering, Computer Science & Engineering

Vasavi College of Engineering, Hyderabad, India
