PROFESSIONAL SUMMARY

- Proficient **Java Full Stack Developer** with **4+ years** of experience in developing scalable, secure web applications across multiple domains using **Java**, **Spring Boot**, **Node.js** and **RESTful APIs** following **Agile** and **TDD** practices.
- Hands-on experience in building Microservices using Spring Boot, integrating with **SOAP/REST** services, and ensuring secure access through **JWT**, **OAuth2**, and **Spring Security**.
- Developed responsive and dynamic front-end applications using **React**, **Angular (7–16)**, **JavaScript**, and **Tailwind CSS**, ensuring optimal UX across devices and browsers.
- Skilled in working with **relational** and **NoSQL** databases including **PostgreSQL**, **Oracle**, and **MongoDB**, using **Spring Data JPA**, **SQL**, and **PL/SQL** for efficient data modelling and performance tuning.
- Familiar with cloud platforms like **AWS (EC2, S3, RDS, Lambda)** and **DevOps** tools such as **Jenkins**, **Docker**, and **Kubernetes** for CI/CD automation and containerized deployments.
- Strong team collaborator with experience using **Git**, **JIRA**, **Confluence**, and observability tools like **Prometheus**, **Grafana**, and the **ELK Stack** for monitoring and debugging production environments.
- Proficient in daily usage of generative AI tools like **ChatGPT** and **GitHub Copilot** for code acceleration, paired with strong manual code review discipline.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring MVC, Spring Security (JWT/OAuth2), Hibernate, RESTful APIs

Frontend: React, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, Tailwind CSS

Databases: PostgreSQL, MySQL, Oracle SQL, MongoDB (NoSQL)

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Kubernetes, Jenkins, GitHub Actions

Testing: JUnit, Mockito, Jest

Collaboration Tools & Others: Git, GitHub, JIRA, Confluence, Kafka, Terraform, SonarQube, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

Tata Consultancy Services | Java Full Stack Developer | Hyderabad, TG, India | Dec 2021 – Dec 2023

- Developed and maintained robust backend components using **Spring Boot**, **Spring MVC**, and **Spring Validator**; implemented core business logic, RESTful APIs, and server-side validation; ensured seamless CRUD operations and secure transaction processing.
- Built responsive and dynamic UIs using **React** and **JavaScript**; implemented real-time client-side validation.
- Integrated it with server-side **Spring validation** for end-to-end data consistency across user forms and workflows.
- Utilized **Hibernate** and **Spring Data JPA** for **ORM** and efficient data access; managed database queries and performance tuning using **Oracle SQL** also ensured data integrity and transactional reliability.
- Deployed applications on **AWS EC2** instances with proper configuration for dev/test environments; integrated file generation services for invoice PDFs using server-side logic, and ensured scalability of services in cloud-native setups.
- Deployed containerized Java microservices using **Docker** and **Kubernetes** & configured services with autoscaling and managed traffic using **AWS EC2**.
- Used **Terraform** to automate provisioning of cloud infrastructure including network components, **IAM policies**, and managed services on AWS.
- Built CI/CD pipelines with **Jenkins**, incorporating SonarQube for static code analysis, **OWASP** checks, and policy-as-code for compliance enforcement before deployment.
- Worked on Agile methodologies and technical code reviews; prepared unit test cases using **JUnit**, and contributed to test coverage goals; conducted impact analysis and time estimation; used **Maven**, **Git**, and **JIRA** for build, version control, and task tracking.

Environment: Java 11, Spring Boot, Spring MVC, Spring Validator, Hibernate, Spring Data JPA, RESTful APIs, React, JavaScript (ES6+), Oracle SQL, AWS (EC2, IAM), Docker, Kubernetes, Terraform, Jenkins, SonarQube, OWASP, Maven, Git, JIRA, JUnit, Agile.

Indian Servers | Machine Learning Intern | Vijayawada, AP, India | May 2020 – July 2020

- Gained hands-on experience in **Python** programming, working on small projects and exercises to build a strong foundation for machine learning tasks.

- Implemented statistical **machine learning** algorithms (supervised and unsupervised) to solve classification and clustering problems, validating results with real-world datasets.
- Explored deep learning concepts using **PyTorch**, including basics of **neural networks** and applied them to practical use cases.
- Worked with **OpenCV** to understand and process image data, applying techniques for feature extraction and pre-processing.
- Learned and applied transfer learning techniques to improve model performance and accelerate training on limited datasets.

Environment: Python, NumPy, Pandas, Scikit learn, PyTorch, OpenCV, Transfer Learning, Neural Networks, Supervised & Unsupervised Learning, Classification, Clustering.

Electronics Corporation of India Limited | Java Intern | Hyderabad, TG, India | May 2017 – Nov 2017

- Contributed to building and maintaining **RESTful APIs** using **Java**, **Spring Boot**, and **Spring MVC**, focusing on modular code structure, proper exception handling, and object-oriented best practices. Used **JUnit** and **Mockito** for unit testing of service components.
- Worked on integrating backend services with modern web frontends using **React.js** and **Thymeleaf**, ensuring responsive UI and smooth data binding with JSON payloads.
- Deployed applications in development environments using **AWS EC2** and **S3**, and participated in setting up **CI/CD** pipelines via **Jenkins** and **GitHub Actions** for automated builds and testing.
- Supported CRUD operations using **Spring Data JPA** with **PostgreSQL**. Optimized SQL queries, and assisted in database indexing and performance tuning for high-traffic endpoints.
- Contributed to building scalable microservices architecture using **Spring Cloud**, including service discovery via **Eureka**. Used **Git** for version control, and collaborated with the team via **JIRA** and **Confluence** in an Agile environment.

Environment: Java, Spring Boot, Spring MVC, Spring Cloud, RESTful APIs, Spring Data JPA, PostgreSQL, React.js, Thymeleaf, JSON, AWS (EC2, S3), Jenkins, GitHub Actions, JUnit, Mockito, Git, JIRA, Confluence, Agile.

VOLUNTEER EXPERIENCE

The Tann Mann Gaadi | Front End Developer | Remote | March 2025 – Present

- Building responsive front-end screens using **React (v18)**, **JavaScript**, **HTML5**, and **TailwindCSS**, ensuring a seamless shopping experience across devices.
- Implementing state management with **React hooks** and **Context API** to support dynamic user interactions for clothing selection and tailor stitching workflows.
- Integrating the front end with **RESTful APIs** to display product catalog, manage tailor requests, and process customer orders in real time.
- Adding form validations and client-side checks to improve data accuracy and deliver a secure and user-friendly checkout process.
- Optimizing application performance with **Dev Tools** like **Chrome**, **React**, and **code-splitting techniques**, while collaborating in an Agile environment using **Git** and **JIRA**.

Environment: React v18, JavaScript, HTML5, TailwindCSS, RESTful APIs, React Hooks, Context API, Form Validations, Chrome DevTools, React DevTools, Code-Splitting, Git, JIRA, Agile.

Northern Arizona University | Teaching Assistant | Flagstaff, AZ, USA | January 2024 – May 2025

- Mentored students in full-stack development covering **React.js**, **Spring Boot**, and RESTful API architecture, emphasizing best practices in modular code structure and clean design patterns.
- Developed modular and reusable front-end components using React and **TypeScript**, applying design patterns for performance and maintainability.
- Led workshops on secure API development, introducing concepts like **JWT**, **OAuth2**, **HTTPS**, and **Spring Security**, including real-world attack scenarios and mitigation strategies.
- Conducted labs on database optimization techniques using **PostgreSQL**, including indexing, query optimization, and transaction management in high-concurrency environments.
- Guided participants through front-end performance tuning for React for **Spring Boot** integrations, focusing on API efficiency, lazy loading, debouncing, and state management with **Redux** or **Context API**.
- Trained students on building and deploying microservices using **Spring Cloud (Eureka, Config Server, Gateway)** and **Docker/Kubernetes**, simulating real-time enterprise deployment pipelines.
- Provided hands-on exercises on **CI/CD** pipeline automation using **Maven**, **Jenkins**, and **Git**, ensuring students understood the complete DevOps lifecycle from code commit to production rollout.

Environment: React.js, TypeScript, Redux, Context API, Spring Boot, Spring MVC, Spring Security, RESTful APIs, JWT, OAuth2, HTTPS, Spring Cloud (Eureka, Config Server, Gateway), PostgreSQL, Docker, Kubernetes, Maven, Jenkins, Git, Agile.

EDUCATION

Northern Arizona University | Master's, Information Technology | January 2024 – May 2025 | GPA: 3.91

Osmania University | Bachelor's, Communications | August 2018 - August 2021 | GPA: 3.0
