

Nikhila Chinthapati

Data Analyst

nikhila@careeremail.net | (316) 461-6543 | USA | [LinkedIn](#)

Summary

Data Analyst with 3+ years of experience in analyzing large datasets and delivering actionable insights to drive business decisions. Proficient in SQL, Python, R, Excel, and data visualization tools such as Power BI and Tableau. Experienced in data cleaning, preprocessing, and validation, as well as developing ETL workflows, conducting statistical analysis, and automating reporting using Excel (pivot tables, array functions, VBA). Skilled in creating process diagrams with Lucidchart and Vision, and managing Agile workflows using JIRA and Confluence. Adept at identifying trends, optimizing processes with Six Sigma principles, and collaborating cross-functionally to enhance operational efficiency across various industries.

Technical Skills

- Languages & Tools:** SQL, Python (Pandas, NumPy, datetime, regex), R (lm method), Excel (VBA, pivot tables, array functions), DAX
- Data Visualization:** Power BI (drill-downs, dynamic filters, What-If parameters), Tableau (LOD calculations, parameter controls, calculated fields), Vision, Lucidchart
- Cloud Platforms & ETL Tools:** AWS S3, AWS Athena, AWS Data Wrangler, Azure Data Factory, Azure Synapse, Azure ML
- Data Analytics & Techniques:** Customer Segmentation, Cluster Analysis (KMeans, Hierarchical Clustering), A/B Testing, Regression Analysis, Feature Engineering, Data Validation, KPI Analysis, Six Sigma
- Workflow & Collaboration:** Agile methodology, Cross-functional collaboration, Requirement gathering sessions, JIRA, Confluence.

Professional Experience

Data Analyst, LendingClub

02/2024 – Present | Remote, USA

- Worked on Customer Segmentation for Personalized Financial Products and collaborated with cross-functional teams in Agile sprints using JIRA and Confluence during requirement gathering sessions for personal loans, credit cards, auto refinancing, and high-yield savings product lines.
- Used SQL to extract and query structured data stored in AWS S3 and implemented ETL workflows using AWS Athena, enabling the processing of over 15 million customer profiles and reducing data retrieval time by 40%.
- Applied Python for data preprocessing and transformation using Pandas, NumPy, datetime, and regex libraries, which helped automate data cleaning tasks and improved efficiency of feature creation pipelines by over 60%.
- Performed clustering techniques such as KMeans and hierarchical clustering on customer behavior and financial features, leading to the identification of 5 unique customer segments and improving product targeting accuracy by 22%.
- Conducted detailed data validation and transformation using AWS Athena and used DAX in Power BI to calculate financial health metrics, ensuring data accuracy above 98% across key business KPIs and segmentation logic.
- Developed interactive Power BI dashboards using drill-down functionality, dynamic filters, and What-If parameters, which accelerated marketing and sales decision-making by 35% and improved stakeholder insights into each segment's performance.
- Automated reporting using Excel VBA and built advanced pivot tables and array formulas for internal financial analysis, supporting leadership with real-time metrics. Created process and data flow diagrams using Lucidchart and Vision to support technical documentation and cross-functional understanding during sprint reviews and planning.

Associate Data Analyst, Agoda

01/2020 – 12/2022 | Hyderabad, India

- Collaborated cross-functionally on the Price Sensitivity and Discount Impact Analysis project; participated in Agile ceremonies and requirement gathering sessions with sales and product teams to align goals and data needs.
- Designed and executed complex SQL queries to extract, join, and filter large-scale datasets; built ETL pipelines using Azure Data Factory to automate data flow and processing from multiple sources.
- Leveraged Python for data manipulation and analysis; utilized NumPy and Pandas for calculating price elasticity, aggregating historical pricing data, and preparing features for modeling and reporting.
- Conducted A/B testing to measure the impact of discounts on user conversion; used statistical techniques to ensure experiment validity and implemented control-treatment comparisons for data-driven decision-making.
- Applied regression analysis in R using the lm() method to explore the relationship between discount percentage and booking volume, enabling deeper insights into pricing effectiveness by user segment.
- Ensured data accuracy through validation scripts and cross-checks; implemented LOD (Level of Detail) calculations in Tableau to isolate price sensitivity trends across cities, channels, and device types.
- Built interactive Tableau dashboards with advanced features like parameter controls, dynamic filters, and calculated fields; integrated data from Azure Synapse and modeled discount impact using Azure Machine Learning.

Education

Master of Science in Business Analytics
Wichita State University

01/2023 – 12/2024 | Wichita, USA

Bachelor of Business Administration in Marketing
Osmania University

05/2019 – 05/2022 | Hyderabad, India
