SUMMARY

Experienced and detail-oriented .NET Full Stack Developer with 3+ years of hands-on experience building scalable, high-performance web and desktop applications using C#, ASP.NET MVC, .NET Core, and SQL Server. Proficient in front-end development with Angular, JavaScript, HTML, and CSS, delivering dynamic user interfaces and seamless API integrations. Skilled in SDLC methodologies including Agile and Waterfall, cloud services like Azure and AWS, and tools like IIS, Azure DevOps, and Git. Strong ability to optimize backend logic, manage cloud-based workflows, and enhance user experience through clean, maintainable code.

SKILLS

Methodologies & IDE: SDLC, Agile, Waterfall, MS Visual Studio Code
.NET Technologies & Frameworks: C#, Angular, ASP.NET MVC, ADO.NET, ASP.NET Core, Restful, .NET Framework, SOAP
Web Technologies: HTML, CSS, JavaScript, Ajax, jQuery, JSON, Front-End frameworks
Application Servers/Cloud Technology: AWS, Azure, DevOps, CI/CD, Data Factory, Repos
Databases: MySQL, SQL Server, Oracle
Version Control / Other Tools: Git, JIRA, UML, Crystal Report, TFS, IIS
Operating System: Windows, Linux

EXPERIENCE

PTC, USA | Dot Net Developer Jun 2024 - Present

- Collaborated with cross-functional teams to design and implement modular web interfaces and .NET-based backend services within a microservices architecture, adhering to Agile methodologies, full SDLC best practices, and principles of scalability, loose coupling, and reusability for an enterprise-grade industrial platform.
- Built high-performance UI components using ReactJS, TypeScript, effectively managing and rendering complex datasets to support real-time monitoring features.
- Developed and integrated .NET Framework and .NET Core Web APIs using C#, facilitating secure RESTful communication between services and improving system reliability.
- Designed and maintained comprehensive API documentation using Swagger/OpenAPI, accelerating integration cycles and improving cross-team efficiency in frontend-backend coordination by 40%.
- Conducted unit testing using NUnit and enforced test-driven development (TDD) practices, incorporating mocking frameworks like Moq and integrating tests into CI/CD pipelines to ensure code reliability, regression prevention, and maintainable application architecture.
- Configured and deployed .NET Core backend services to IIS for reliable API hosting, and integrated React applications using Node.js build tools, ensuring seamless frontend-backend delivery and optimized runtime performance in a scalable AWS environment.

West Pharmaceuticals, India | Dot Net Developer Jan 2021 - Dec 2022

- Spearheaded the development of a custom license auditing web application from scratch, contributing to architecture, database design, and full-stack implementation using ASP.NET Core (C#), Xamarin, and MySQL.
- Created dynamic RESTful and SOAP-based APIs using C#, LINQ, and Lambda expressions, secured with Azure AD authentication and token-based access, enabling hierarchical license approval workflows across the organization.
- Designed and implemented multiple UI screens including login, approval tracking, and request management, delivering a seamless user experience with Xamarin, Html, CSS, jQuery, and JSON.
- Developed core modules in the Extended Warehouse Management (EWM) system using ASP.NET Core and Entity Framework, processing large-scale logistics data while adhering to SOLID principles, design patterns, and clean architecture to support critical pharmaceutical manufacturing operations.
- Engineered backend modules for carton tracking, delivery scheduling, and stock movement using ASP.NET Core, Entity Framework, and optimized SQL Server queries.
- Built and integrated modular screens for Inbound, Internal, and Outbound operations, aligning logistics workflows with SAP and enhancing warehouse visibility.
- Managed and resolved tasks using JIRA, collaborating with QA teams to execute unit testing, integration testing, and UAT, ensuring high-quality releases with minimal production defects.
- Automated and deployed cloud-based solutions across Dev, Staging, and Production environments using Azure Logic Apps, Data Factory, CI/CD pipelines, and Git via Azure DevOps, enhancing delivery efficiency by 30%.

Techouts, India | Software Developer Jan 2020 - Dec 2020

- Developed a complete Survey and Feedback System using ASP.NET Core Web API and SQL Server, allowing users to create surveys, submit responses, and view results.
- Built dynamic and user-friendly forms using HTML, CSS, Bootstrap, and JavaScript, with input validation and smooth API integration using Fetch API.
- Implemented backend APIs in C# with Entity Framework Core for handling surveys, questions, and responses, following clean and maintainable coding practices.
- Enabled survey listing and filtering features to allow users to view available surveys based on categories or active status, improving user experience and accessibility.
- Conducted manual testing across key survey flows and submitted feedback for UI/UX improvements, helping ensure smooth user interaction before deployment.
- Collaborated within an Agile Scrum team, actively participating in sprint planning, daily stand-ups, and code reviews to ensure timely delivery and maintain high code quality.

EDUCATION

Master of Science in Computer Science May 2024
University of North Carolina at Charlotte, Charlotte, NC
