

V Nikhitha

Java Full Stack Developer

Contact: +1 (972) 312-5615

Email: v.nikhitha9@gmail.com | [LinkedIn](#) | Irving, Texas

PROFESSIONAL SUMMARY:

Skilled Java Full Stack Developer with around 3+ years of experience designing and building scalable, high-performance web applications and microservices. Proficient in developing robust backend systems using **Java (8–17)**, **Spring Boot**, **Hibernate**, and **RESTful APIs**, paired with dynamic front-end development using **React.js** and **Angular**. Experienced in implementing secure, cloud-native solutions on **AWS** including containerized deployments using **Docker** and **Kubernetes**, and infrastructure automation with **Terraform** and **CloudFormation**. Hands-on expertise in **CI/CD pipelines** (Jenkins, GitHub Actions), **event-driven architecture** (Kafka, RabbitMQ), and system monitoring using **Prometheus**, **Grafana**, and **ELK Stack**. Strong background in database management with **PostgreSQL**, **MongoDB**, and **MySQL**, ensuring optimized data flow and high availability. A collaborative team player with experience working in **Agile/Scrum** environments, contributing to cross-functional teams, peer code reviews, and maintaining high test coverage with **JUnit**, **Mockito**, and **Jest**. Committed to continuous learning and delivering clean, maintainable, and scalable code that drives real business impact.

TECHNICAL SKILLS:

Languages: Java (8–17), Python (Pandas, NumPy), JavaScript, TypeScript, C++

Frameworks: Spring Boot, Hibernate, React.js, Angular, Redux, Node.js

Web & APIs: HTML5, CSS (Flexbox, Grid, Responsive Design), REST, WebSocket

Databases: PostgreSQL, MySQL, MongoDB, Oracle, DynamoDB

Cloud Platforms: AWS (EC2, S3, Lambda, RDS, Cognito, API Gateway, CloudFormation, EKS), Azure (Blob Storage, App Services)

DevOps: Docker, Kubernetes (EKS), Terraform, Jenkins, GitHub Actions, GitLab CI, Maven

Monitoring: Prometheus, Grafana, ELK Stack, CloudWatch, X-Ray, New Relic

Messaging: Kafka, RabbitMQ

Testing & Tools: Junit 5, Mockito, Postman, Jest, Git, Jira, Confluence, Agile/Scrum

PROFESSIONAL EXPERIENCE:

Software Engineer | Client: PetSmart, Irving, Texas | Sep 2024 – Present

Responsibilities:

- Developed enterprise-grade features across backend and frontend using **Java 17**, **Spring Boot**, and **React.js**, supporting PetSmart's customer engagement, order management, and inventory platforms.
- Built and maintained scalable **RESTful APIs** with **Spring Boot**, enabling seamless integration between microservices and third-party logistics systems via **Apache Kafka**, reducing order fulfillment latency by 25%.
- Engineered real-time, data-driven dashboard components using **React.js**, seamlessly integrated with **Node.js** backend services to enhance operational visibility for store managers across locations.
- Designed optimized data models and managed persistence layers using **PostgreSQL** for transactional data and **MongoDB** for product catalogs and customer activity, improving query efficiency through index optimization.
- Implemented backend microservices using **Spring Boot**, **Spring MVC**, and **Hibernate**, supporting high-volume modules such as order processing, product search, and inventory sync across distributed store systems.
- Automated cloud infrastructure provisioning for PetSmart's microservices using **AWS CloudFormation** and **Terraform**, enabling consistent and secure deployments across development, staging, and production environments.
- Containerized microservices using **Docker** and deployed them to a **Kubernetes** cluster, ensuring high availability, auto-scaling, and fault tolerance during high-traffic seasonal events.
- Configured **CI/CD** pipelines with **Jenkins** and **GitHub** actions, automating build, test, and deployment workflows, reducing manual deployment time by 40% and improving team velocity.
- Configured **Prometheus** and **Grafana** for proactive system monitoring and set up centralized logging with **ELK Stack** to troubleshoot production issues rapidly.
- Deployed and scaled backend applications on **AWS EC2**, with **S3** for asset storage and **RDS** for database hosting, implementing automated failover and backup strategies to ensure high availability.
- Monitored **RabbitMQ** queues using management plugins to track message rates, queue depth, and delivery times, helping maintain consistent message flow.

- Optimized **Apache Tomcat** server configurations to enhance response times, thread handling, and memory usage, resulting in 30% faster load times.
- Worked in **Agile sprints** alongside cross-functional teams to deliver customer-facing features, perform peer code reviews, and maintain 85%+ test coverage across Spring Boot microservices using **JUnit** and **Mockito**.

Programmer Analyst | Cognizant, Chennai, India | Client: AXA XL Reinsurance | Nov 2020 – Jul 2022

Responsibilities:

- Developed core components of the policy lifecycle management system using **Java 8**, **Spring Boot**, and **Hibernate**, automating key processes like policy issuance and renewals, which reduced manual processing time by 30% and improved operational accuracy.
- Built and maintained **responsive UIs** using **Angular 11&12** and **React.js**, enabling brokers and underwriters to view policy summaries, submit claims, and manage client data more efficiently.
- Designed and integrated **RESTful APIs** using **Spring Boot** to connect internal systems with third-party **CRM and underwriting platforms**, reducing manual data input and accelerating claims processing by approximately 20%.
- Built and deployed **scalable backend microservices** using **Spring Boot**, hosted on **Apache Tomcat** and **AWS EC2**, ensuring **99.9% uptime** during peak policy renewal cycles and supporting concurrent processing across distributed teams.
- Implemented **Spring Security with JWT-based authentication and RBAC**, ensuring secure access for brokers, underwriters, and compliance users.
- Worked with **MySQL and MongoDB** to manage high-volume policy and claims data, implementing indexing and query optimizations to support quick retrieval of client and policy data.
- Integrated **API Gateway** with backend services and implemented secure inter-service communication using **OAuth2**, **Azure Active Directory (AAD)**, and **Spring Security**, enhancing authorization and access control across distributed microservices.
- Contributed to the design of automated **CI/CD pipelines** using **Jenkins**, **Git**, and **Maven**, enabling faster, error-free deployments across development and staging environments and reducing manual intervention by **30%**.
- Collaborated with business analysts and QA teams in Agile sprints using **JIRA**, contributing to story grooming, unit testing (**JUnit**, **Mockito**) and defect triage.
- Supported hybrid cloud integration efforts between on-prem systems and **Azure**, creating secure API bridges for document workflows and client communications.
- Helped implement monitoring and logging using **Spring Boot Actuator** and **ELK Stack**, and custom health check endpoints to detect system bottlenecks early.
- Contributed to dashboard development using **React.js**, visualizing metrics such as claim statuses, policy expiration alerts, and broker performance insights.

Programmer Analyst Trainee | Cognizant, Chennai, India | Client: AXA XL Reinsurance | Oct 2019 – Nov 2020

Responsibilities:

- Developed a dynamic real-time data processing web application using **Java (Spring Boot)** and **React.js**, ensuring seamless data flow between frontend and backend systems.
- Implemented secure and efficient **RESTful APIs** with Spring Boot, enabling robust communication between front-end and back-end services.
- Built responsive and accessible user interfaces using **HTML5**, **CSS** enhancing cross-device compatibility and improving the usability of both internal tools and external client portals.
- Utilized **React.js** and **React Hooks** to create modular and reusable UI components that supported real-time updates of user activities.
- Managed complex application state with **Redux**, optimizing data flow and improving overall application performance and usability.
- Integrated backend data with the **React.js** frontend using **REST APIs** for asynchronous data fetching, resulting in faster load times and smoother interactions.
- Conducted thorough unit and integration testing using **Jest** and **React Testing Library**, ensuring application robustness and high code quality.
- Deployed applications on **AWS**, leveraging cloud infrastructure to enhance scalability and reliability.
- Applied **Agile methodologies** throughout the development lifecycle, collaborating closely with cross-functional teams to deliver features iteratively and efficiently.
- Worked with both **SQL** and **NoSQL** databases to manage and query data, supporting the application's data storage and retrieval needs.
- Ensured smooth version control and team collaboration using **Git** and **GitHub**, maintaining clean and organized code repositories.

- Assisted in implementing performance optimizations like lazy loading and code splitting, contributing to faster page load times and improved user experience.

EDUCATION:

University of North Texas – Computer and Information Science | Denton, Texas

Aug 2022 – May 2024

Master of Computer and Information Science | GPA: 3.55/4.00

Sri Venkateswara College of Engineering | Tirupati, India

Jul 2016 – Oct 2020

Bachelor of Technology in Electronics and Communication Engineering | GPA: 8.05/10.00

CERTIFICATION:

- **AWS Certified Solutions Architect – Associate (2024)**
