SUMMARY

- I do have hands-on and Proactive Software Developer with expertise in JAVA web application development using MVC Framework on the Java EE platform. worked in the Hibernate framework and cloud-native application development, Skilled in designing scalable solutions and automating CI/CD pipelines using Jenkins, Kubernetes.
- Experienced in leveraging AI-Powered tools such as a gemini integration to VS code and copilot to accelerate development, enhance the code quality and streamline debugging. Strong focus on delivering clean, efficient and maintainable code. As well as worked on Azure Cloud service for integration azure Service bus, Web app, Function App.
- Designing and developing web applications using Technology such as JavaScript Spring, Spring Boot, JSP, Hibernate, REST API Web services, Bootstrap, HTML, CSS, and React.
- Worked on Spring Boot Micro service for authorization and followed SOA structure style to Micro service and Communicating over HTTP resource API. Completed Generative course to implement the AI Solution.
- Experience in (SDLC) analysis, design, development, documentation, and implementation of software systems in Java, J2EE, User Interface (UI), and Internet technologies.
- Worked on AWS S3, Lambda, IAM, EC2, API Gateway, and Email Services, and developed a Web service that includes logic for sending email through Amazon SES and for Database DynamoDB.
- Knowledge about creating Docker Containers and How to manage using Docker by writing Docker files
- Exhibited analytical and problem-solving skills with attention to detail and the ability to work independently and within a team.
- Worked on converting project claims reimagine (Cobol) to java, also used Redis database and worked with Agile methodology. also working on production problems and fixing the ongoing complex issue. working on different platforms and different services.
- I am always willing to gain knowledge and develop my skills and ready to take new responsibilities

PROGRAMMING SKILLS

Languages and Mark-up/XML Technologies	Java J2EE, HTML, JavaScript, Angular, CSS, XML, JSON, Python, Generative AI Models ,Gemini, GitHub Copilot
Framework	Spring, Hibernate, Spring IOC, Spring AOP, Log4J, JUnit, Spring Boot, Spring Security, Spring Boot Micro service, JFrog, Jump server
Web services	SOAP, RESTful, WSDL, JAX-RS, AWS S3, Lambda, IAM, EC2, API Gateway, Azure Web APP, Function App, Service bus
Web/App Servers	Web Sphere, Apache Tomcat, JBoss, TeamCity, FileNet, SonarQube, Docker, Kubernetes,
Database	SQL-Server, MySQL, Redis insight, DBeaver(22.0.0), DynamoDB, Oracle SQL, PostgreSQL, Snowflake,Cluster,
Development Tools	Eclipse, Spring Tool Suite (STS), IntelliJ, Visual Studio, PG Admin
Tools and CD, Platform	JUnit, SoapUI, GitHub, SonarQube, Azure, Nexus, One stop, Datahub, Postman
Version Control	GIT, GIT Bash, Bit bucket, GitLab, Azure Pipeline
OS & Environment	Windows, UNIX, Mac, SIT, PIT, Pre Production, Production
Build-Automation Tools (CI)/Issue Tracking Tools	Maven, JIRA, Urban code build, U Deploy

EXPERIENCE

Infosys

Technology Lead / Developer / Technology Analyst

JAN -2022 to SEP - 2025

Blue Shield of California**Role: Tech Lead****MAR-2025 to SEP- 2025**

- Successfully lead the migration of a Smart COMM application to Azure cloud, involving architectural redesign, performance enhancements, and cross-team collaboration for seamless deployment.
- Spearheaded the migration of a complex Smart COMM application to Azure Cloud. Managed architecture transformation, Performance tuning and integration with enterprise systems.
- I worked on Azure services for the cloud setup through Web App, Function App, Azure Service bus and integrated with the cloud.
- Managed migration work with ADF (Azure data Factory) and Tidal Connectivity, PowerShell script, DevOps Activity, Sterling and Boomi connection and Smart COMM Api team, Testing team and daily meetings with Product owner and Manager for the High-level updates.
- Facilitated and contributed to Agile Scrum ceremonies, promoting collaboration and transparency across cross-functional teams during the cloud migration project.
- Worked on DSR, CR and CHG creation and managed the project timeline and SOW preparation.
- I have delivered the work on YMAL creation on the PEGA project on the tech side to migrate on cloud, tested and delivered the work using eclipse and git bash and swagger and J Frog, Postman.

CareFirst, USA**Role: Technology Lead****JUN-2023 to MAR 2025**

- I was working as a technical lead on a PEX application to have technical proficiency and strong commitment to the success of the project. Managing project life cycle and optimizing processes and mentoring team members to achieve high performance. Implementing agile methodologies to improve efficiency and adaptability.
- Identifying onsite ongoing production issues in different types of environments such as a SIT, PIT, TEST, PREPRODUCTION and PRODUCTION and resolving as per the client requirement, to resolve this issue coordinating with different teams. Connecting with product managers, designers, and other stakeholders to define project requirements and deliverables. Working with a data service team, cloud infrastructure team and business analysts to set up a new nexus flow. worked on Kubernetes to analyze and check the issue.
- Coordinating with database administrators, software developers, and network engineers and firewall team to identify bottlenecks and conflicting configurations to resolve the production issue.
- Conducting the code reviews, ensuring adherence to best practices and coding standards. Attending CAB meetings and presenting upcoming changes to production to the different team leads and product managers.
- Onsite customer support working on different types of tickets using One stop ticketing tool. doing code fix and writing a query to fix the issues regarding data problems. also working on fixing the file transmission problem through JUMP SERVER. On the other side I used the SFTP process and set up this process with the FileNet team.
- Parallely working on development with different functionality in backend using JAVA and Hibernate using MAVEN project and we are using agile methodology and frontend web designing functions in angular. also adding new properties for different environment configurations.
- Developing a file transmission for a claim of all medical records, for the file transmission we are using JUMP Server to transfer a file with attachment of all the in network and out network members. Now we are developing a payment model for existing and new records with data transmission to the Organization for all the claims. Using FILENET to transfer the data, we are configuring it through backend code.
- working on DL for efficiency and consistency, for a convenient way to send an email based on the business requirement after an auto batch job run as per the scheduler.
- Currently I am working on a nexus platform setup for an existing PEX application. To setup this we are using PGADMIN Database and to store all the dataset and this is a completely new setup to import from oracle SQL. We are using DATAHUB, and we are using the snowflake database to store the large dataset.
- Developing a new batch job and working on scheduler and tasklet to have the job run on auto schedule and send the report to the Organization. scheduling different types of email notification as per the new functionality to the UI.
- Working on nexus flow, developing a new YAML file and adding all configuration into it. scheduling all the services, also analysing all the JUNIT code with the team and reviewing the testing code and code smell and bug fix.
- To test the application, we are using POSTMAN with a POST and GET method and different endpoints to test the services.

- Hands-on experience on deployment through AZURE pipeline for the backend and for the frontend code I am using Urban code build and UDeploy. Scheduling with the WebSphere team to have the changes on place. Each month I am doing deployment as per the M2M Deployment as we decided to have something to go to production on each month.
- We are receiving new enhancements every 6 months with a new set of requirements. I already completed 3 sets of enhancement. Worked on budget estimation of these enhancements for number of hours and team size to submit the new work order on a BEE-LINE.

Anthem, USA

Role: Senior Technology Specialist

SEP-2022 to JUN-2023

- I was working with Anthem to convert a Cobol project to Java and understood the complex framework. I worked on developing rules in VS code and developing JUnit and worked on technical tasks to noun adding part into the service using java and solving a bug and version modification into Bitbucket.
- For testing we have been using Postman and checking all values in the Local and SIT environment. redis insight we used for the database.
- followed the strict schedule and worked on the development of the java code to write a rule conversion, managed a different data set to add a noun and then used that noun to write a rule, also setup a new process flow for picked these rules and convert the value as per the noun defined to the system.
- Cross checking all values using Swagger with all the json format to get a confirmation and consistent result.
- We were using VS code, eclipse for configuring the file and developing, BitBucket, Git Bash,Swagger.
- Developed a rule and conversion of the existing system and through the medical code, which were picking financial value us per the Anthem medical rule.

Northwestern Mutual Life, USA

Role: Engineering Solutions Delivery

APR 2022 to SEP 2022

- I was working on the Backend side for CompEvent Processor and Forecast Processor and Operational processor, Handling the Development part as well Junit for all Processors and working in Java, hibernate, Junit - Functional Testing.
- Removing the code smell and critical Issues, bug fixing, and recovering the code using Sonarqube .
- worked on development of using different types of batch processes to set up multiple functionality and connections with different processors.
- Using STS for Developing, Jira, and Zoom for daily work and Meetings, and Gitlab, GitBash, Beyond Compare, Docker, and DBever(22.0.0) for Database and Slack.

United Airlines, USA

Role: Technology Analyst

FEB 2022 to MAR 2022

- I was working in AWS services like ECS used for keeping containers and running, EC2 used for creating Clusters, S3 used for store buckets, and IAM roles used for security, maintaining clock time up and down for clock service and for database dynamo DB and CLI.

BIZSALT , India

ROLE: JR. SOFTWARE DEVELOPER

JAN 2018 - JAN 2021

- Worked on developing the web application using JAVA and designing using Jsp, React Js, and creating workflow diagrams.
- Experienced and Knowledge in web development in JavaScript Spring, Spring Boot, Hibernate, RESTful Web Services, Flexbox, JSTL, Bootstrap, Html, CSS, and WordPress.
- Worked on Spring Boot Micro service for authorization and followed SOA structure style to Micro service and Communicating over HTTP resource API.
- Resolved the issue and code smells as well as hands on experience on deployment process and tag Creation.
- I was creating a use case of the different process and creating the technical documents, and developed a web page.

CERTIFICATIONS

- Generative AI and Machine learning course completed
- I have taken training for 6 months in JAVA, Hibernate, JSP, JavaScript, Spring Boot, and Designing
- Spring with Spring Boot Certification
- JavaScript- The Complete Guide Certification
- AWS Training & Certification API Gateway, Configure and Deploy AWS Client VPN
- AWS Training & Certification SaaS Business Fundamentals, Introduction to AWS Step Functions
- AWS Fundamentals: Going Cloud-Native Certification an online non-credit course authorized by Amazon Web Services and offered through Coursera
- Programming for Everybody (Getting Started with Python) Certification is an online non-credit course authorized by the University of Michigan and offered through Coursera
- Certification in progress “Software Security”
- Certification in progress “Front-end web development with React”

PUBLICATIONS

- Published the paper “Challenges of Internet of Things” in the UGC Care list approved Group ‘II’ Multidisciplinary journal.
- Published the paper “Additional Media Player" in the International Journal of Advance Research and Innovative Ideas in Education.

EDUCATIONS

- M.Tech in Computer & Science. from SRK, Hoshangabad with a GPA of 3.8, Completed in 2020
- B.Tech in Computer & Science. from CCET, Surendranagar with a GPA of 3.7, Completed in 2018
- Diploma in Computer & Science. from GTU, Surendranagar in 2015 with a GPA of 3.8, Completed in 2015

PROJECTS

Volunteer notification System: To collect the Volunteer information through email notification using Lambda service. Store and fetch the data from S3 storage using other AWS services like SES, IAM, EC2, and API Gateway.

Hospital Management System: Website Developed front end using javascript and the back end was using java and fetched the query from MySQL database for patients records.

IoT-based Fallback Mechanism in VANET: Intelligent transport system (ITS) and sensor-based VANET used in the communication of information in vehicular environments developed in Python, Java, JavaScript, and using Arduino Nano, Raspberry pi 3 b+.

Project Training guide: Website of project training purpose developed to collect the various information using javascript, HTML, CSS, PHP, and back end using MySQL database.

Justtalk System(Social Networking system): Build the social networking system using SES Protocol. Developed the Front end in PHP, HTML, CSS, JavaScript, and back end using MySQL database.
