

Professional Summary

Data Scientist with three years of proven expertise in leveraging advanced analytics and machine learning techniques to extract actionable insights, drive informed decision-making, and contribute to organizational success. Adept at leading end-to-end data science projects, from formulating problem statements to deploying scalable solutions. Well-versed in diverse industries, including finance, healthcare, manufacturing, and e-commerce. Proficient in programming languages such as Python and R, with hands-on experience in deep learning frameworks, natural language processing, and statistical modeling. Demonstrated success in implementing predictive analytics for financial markets, healthcare outcomes, and image recognition. Strong communicator and team collaborator, committed to delivering innovative, data-driven solutions that optimize processes and enhance business strategies. Seeking opportunities to contribute my skills and experience to a dynamic and growth-oriented organization.

Professional Experience

Data Scientist, Doublene, USA

Aug 2023 – Present

Responsibilities: -

- Developed and implemented predictive models for customer churn prediction, leading to a 15% reduction in customer attrition and the development of targeted retention strategies.
- Utilized regression analysis, decision trees, and ensemble methods to forecast key business metrics, facilitating proactive decision-making.
- Scripting ai conversational systems, capitalizing GPT 3.5 model raising usage rate by 25% impacting finances positively.
- Fine tuning GPT model by embedding exclusive university data, to communicate relevant responses by 64%
- Engineered a Kera's Bi-LSTM model pipeline with n-gram padding, optimizing next word prediction accuracy by 35% and, elevating language generation by 25%
- Conducted comprehensive data exploration and feature engineering to uncover patterns and trends within large datasets.
- Led predictive analytics initiatives for financial markets, developing time series forecasting models and implementing automated trading strategies that consistently improved portfolio performance.
- Analyzed electronic health records (EHR) data in the healthcare sector, identifying patterns and risk factors for adverse patient outcomes. Developed predictive models for patient readmission, resulting in improved patient care.

Data Scientist, Maryland Department of health, Baltimore, MD

Oct 2022 – Aug 2023

Responsibilities: -

- Collaborated with cross-functional teams to identify relevant features and enhance the overall quality of input data for model training.
- Utilized tools such as Tableau and Matplotlib to create compelling data visualizations, making complex findings accessible and actionable for both technical and non-technical stakeholders.
- Collaborated with business teams to create interactive dashboards for real-time monitoring of key performance metrics.
- Worked closely with cross-functional teams, including product managers, engineers, and business analysts, to understand business requirements and align data science initiatives with overall business goals.
- Conducted regular knowledge-sharing sessions to disseminate insights and foster a data-driven culture within the organization.
- Applied deep learning techniques to develop an image recognition system for quality control in manufacturing. Reduced defect rates by 20% through automated identification of product anomalies in real-time.
- Implemented natural language processing (NLP) models for customer support interactions, categorizing and prioritizing tickets for faster resolution. Enhanced customer satisfaction by 15% through improved response times and personalized support based on sentiment analysis.

Data Scientist, TecArtists Inc, India

Jun 2020- Aug 2021

Responsibilities: -

- Collaborated with cross-functional teams, including product managers, engineers, and business analysts, to align data science initiatives with overall business goals.
- Developed robust time series forecasting models using machine learning algorithms to predict stock prices and market trends.
- Implemented automated trading strategies based on predictive analytics, resulting in a consistent improvement in portfolio performance.
- Applied convolutional neural networks (CNNs) and transfer learning techniques to develop an image recognition system for quality control in manufacturing.
- Reduced defect rates by 20% through the automated identification of product anomalies in real-time.
- Spearheaded the implementation of predictive models for customer churn prediction, reducing attrition rates by 15% and contributing to targeted retention strategies.
- Led the design and deployment of machine learning models for fraud detection in financial transactions, achieving a 20% improvement in fraud detection rates with minimized false positives.

Skills

Programming Languages: Python (NumPy, Pandas, Scikit-learn, Pytorch, Seaborn, TensorFlow, Keras, Flask), Java, Spark, R (caret, tidy, dplyr, forecast, ggplot), Excel

Tools: Reporting (MS Office), Visualization (Tableau, Power BI), Version Control (Jenkins, GIT, Bitbucket), Cloud (Azure, AWS), Google Analytics, IDE (VS code, Spyder, Anaconda, R Studio), Spring boot

Database: SQL (MySQL, PostgreSQL, MS Access), ETL

Data Analysis: Normalization, ANOVA, T-tests, Chi-Squared tests, Bayes Factor, Hypothesis Testing, Heteroscedasticity, Sampling, VIF, Correlations, RapidMiner, Stationarity, a/b Testing, statistics

Machine Learning/AI: Naive Bayes, K means, ARIMA, SVM, LDA, Linear/Logistic Regression, Bagging, Boosting, Cosine Similarity, K- means, OpenAI, Midjourney

NLP/Deep learning: Word2Vec, Transformers, Neural Networks, LSTM, GRU, BERT, NLTK, Spacy, Genism, Seq2Seq models, SciPy, WordNet

Education

**Master of Professional Studies in Data Science
2023**

Aug 2021 – May

University of Maryland Baltimore County MD

**Bachelor of Technology in Computer Engineering
2020**

Aug 2015 – Jul

University of Pune, India
