Mobile: +1-315-567-7983

EDUCATION

- **Northwest Missouri State University** Maryville, USA
Master of Science in Applied Computer Science; GPA: 3.80/4
Jan 2024 – May 2025
Courses: Mobile Computing-Android, Application Design: Patterns and Frameworks, Database Management System.
- **Velagapudi Ramakrishna Siddhartha Engineering College** India
Bachelor of Technology in Electronics and Instrumentation Engineering; GPA: 7.9/10.0
Aug 2019 – Apr 2023
Courses: Control Systems, Microcontrollers and Embedded Systems, Programming in Java, Data Structures through C.

SKILLS

- **Languages:** Python, Java, C, HTML5, CSS, PHP, JavaScript, SQL, PL/SQL.
- **Cloud Services:** Amazon Web Services (S3, EC2), Google Cloud Platform(Kubernetes, SQL, Google Colab, Google SMTP), Firebase.
- **Frameworks & Web Services:** Spring Boot, Spring Data, Hibernate (JPA), Django, Angular, Bootstrap, ReactJS, REST APIs, JQuery, JUnit.
- **IDE & Build Tools:** NodeJS, IntelliJ, Visual Studio, Eclipse, Jupyter, Git, Maven, Apache Kafka, Hadoop, Map Reduce, Pytorch.
- **Database Tools:** MySQL, PostgreSQL, MongoDB, Oracle.
- **UI/UX:** Responsive Web Design, Material UI, Android XML Design.
- **Networking:** TCP/IP, DP, HTTP, FTP, LAN/WAN, VPNs, Firewalls.
- **AI & ML:** Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, LangChain, OpenAI API, Hugging Face Transformers, Scikit-learn, NLTK, tensor flow.

EXPERIENCE

- **Schneider Electric** Chennai, India
Graduate Engineer Trainee Jan 2023 - Dec 2023
 - Electrical control cabinets housing safety systems, power distribution units, and communication modules were designed and optimized to ensure smooth operation and integration in automation projects.
 - Improved design accuracy and system efficiency by using FoxDraw to develop, design, and modify Piping and Instrumentation Diagrams (P&ID) for safety and control systems.
 - Created utility scripts in Java and Python to automate repetitive engineering tasks such as I/O list generation, configuration validation, and data logging for control systems.
 - Built simple Java programs to interface with SQL databases, fetching and validating configuration data used in safety system modules.
 - Gained hands-on exposure to network fundamentals, including communication protocols, firewall configurations, and IP-based module integration within control systems.
 - In order to improve overall system performance and reliability, I worked with engineers to improve system designs by adding sophisticated communication and control modules.
 - Streamlined control and monitoring procedures for safety-critical operations by configuring and modifying system capabilities using FoxView.
 - Helped to optimize operational safety and ensure adherence to industry requirements by integrating safety systems and control devices.
 - Worked together with cross-functional teams to support the development and customization of control systems in order to fulfill client-specific objectives and enhance project outcomes.
 - Contributed to software documentation and sprint reviews under Agile Scrum, outlining implementation changes and known issues for handoff to QA or field teams.
- **Northwest Missouri State University** Maryville, USA
Software Developer Aide Jan 2025 - May 2025
 - Maintained and enhanced existing software systems used across the university's academic platforms.
 - Designed and developed new application features and interface improvements using Java, JavaScript, and HTML/CSS to improve usability and functionality.
 - Assisted in managing web and multimedia servers, including deployment and routine maintenance.
 - Utilized SQL for database querying and management tasks, supporting data integrity and performance.
 - Collaborated with faculty and staff to identify system needs and implement scalable technical solutions.
 - Gained experience working in a structured development environment while balancing academic commitments.

PROJECTS

- **AI-Powered Software Engineering Quiz Bot: An Interactive Learning Tool** Mar 2025 - May 2025
 - Spearheading the development of an AI-powered quiz bot using TensorFlow and DialogFlow, providing an interactive platform for software engineering learning.
 - Leveraged machine learning and natural language processing (NLP) to generate intelligent questions and analyze responses, enhancing the learning experience.
 - Focused on delivering adaptive learning pathways based on quiz performance and instant feedback to improve engagement and learning outcomes.

- **Real-Time Trend Analysis with twitter Using Big Data Technologies**

Jan 2025 - Mar 2025

- Led the development of a real-time trend analysis system using Hadoop and MapReduce, processing large datasets to extract valuable trends.
- Built and optimized MapReduce jobs for efficient data processing, reducing processing time by 40%.
- Implemented data pipelines and SQL queries to identify trends and visualize results, enabling timely decision-making.
- Achieved high scalability, processing millions of records per day with minimal latency.

- **TeleMedicine Application**

Aug 2024 - Apr 2025

- Developed a telemedicine app using Node.js for backend, TiDB Cloud (MySQL) for database management, and Firebase for efficient storage and user authentication.
- Integrated Agora SDK for real-time video consultations and Google SMTP for email notifications.
- Used Android Studio to design the mobile app frontend and hosted the backend on Railway for scalability.
- Utilized GitHub for version control, Visual Studio Code for backend development, and Postman for API testing.
- Conducted unit testing with JUnit to ensure high-quality, bug-free application performance.

- **EduCentral Application**

Aug 2024 - Nov 2024

- Developed the EduCentral mobile app using Android Studio and Firebase Authentication to centralize campus-related information, enhancing accessibility for new and first-year students.
- Designed dynamic layouts with XML and implemented secure user authentication, resulting in a 50% improvement in user engagement and navigation.
- Facilitated team collaboration through GitHub, ensuring code quality and efficient development workflows.
- Integrated Firebase Firestore for real-time data storage and sync, improving app responsiveness.

- **Non-Invasive Detection of Coronary Artery Disease using CardioCare Application**

Apr 2022 - Apr 2023

- Developed an integrated health monitoring system combining a heart rate sensor, microcontroller, OLED display, and Bluetooth module to track heart rate in real-time and detect symptoms of coronary artery disease (CAD).
- Designed and implemented an Android application to interface with the wearable device, providing live updates and notifications for CAD anomalies.
- Ensured seamless Bluetooth communication for data transmission, enhancing real-time monitoring and timely medical intervention.
