SUMMARY

Results-driven **Java Developer & Software Engineer** with **4+ years of experience** specializing in **enterprise application development, microservices architecture, and full-stack development** in the **insurance and healthcare sectors**. Adept at designing and implementing **scalable Java-based solutions** and optimizing **cloud-based infrastructures** using **AWS, Kubernetes, and Docker**. Strong expertise in **CI/CD, API development, and Agile methodologies** to ensure robust, high-performance software solutions.

SKILLS:

- **Programming Languages:** Java (Java 8+), Python, JavaScript (ES6+), C++, C#, TypeScript, SQL
- **Frameworks & Libraries:** Spring Boot, Hibernate, Struts, Angular, React.js, Node.js, Express.js, Django, Apache Kafka
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, RDS), Kubernetes, Docker, Jenkins, Terraform, CI/CD Pipelines
- **Databases:** PostgreSQL, MySQL, MongoDB, SQL Server
- **Web Services & APIs:** REST, SOAP, Microservices Architecture, GraphQL, API Gateway
- **Security & Compliance:** JWT Authentication, OAuth2, SSL/TLS, HIPAA Compliance, Secure Coding Practices
- **Agile & Tools:** JIRA, Confluence, Git/GitHub/GitLab, VS Code, IntelliJ IDEA, Apache Spark

EXPERIENCE:

Software Development Engineer – Humana Inc., California

Jun 2024 - Current

- Designed and developed a **policy management system** using **Java, Spring Boot, and AWS**, reducing **manual errors by 25%** and improving **policy renewal automation**.
- Implemented a **patient data synchronization module** using **secure REST APIs**, ensuring **HIPAA-compliant real-time data exchange** with external providers.
- Developed a **React.js-based customer portal**, increasing **user engagement by 10%** by providing seamless access to **health benefits, claims, and appointment scheduling**.
- Integrated **Apache Kafka for real-time stream processing**, enhancing data pipeline scalability and improving processing performance by **12%**.
- Executed **CI/CD pipelines with Jenkins and Docker**, reducing deployment time and automating testing for seamless **production rollouts**.

Software Development Engineer – Capgemini, India

Aug 2021 - Aug 2023

- Developed a **motor insurance claims automation system** using **Java, Spring Boot, and Hibernate**, reducing **claims processing time by 22%** and increasing customer satisfaction.
- Integrated **third-party telematics data** into underwriting, enabling **dynamic pricing models** that increased **policy sales by 8%**.
- Implemented **secure API gateways** for policyholder data, improving **data security compliance** and reducing **unauthorized access incidents by 20%**.
- Migrated a **legacy claims management system** to **microservices architecture**, improving **scalability and performance** under high-load conditions.

Junior Software Developer – Capgemini, India

Jan 2021 - Jul 2021

- Contributed to the development of a **secure document storage system** using **Node.js and AWS S3**, improving **data accessibility and security**.
- Developed **Java-based backend services** using **Spring MVC and JSP**, enhancing security and accessibility of **client-facing applications**.
- Led migration efforts from **monolithic to modular architectures**, leveraging **C# and .NET technologies** to improve **scalability**.

EDUCATION:

Depaul University, Chicago

Master of Science in Computer Science

Sep 2023 - Jun 2025

GPA - 3.97

University of Mumbai, India

Bachelor of Engineering in Computer Science

Jun 2018 - Jun 2021

GPA - 3.54

Academic Projects: Real-Time Transaction Anomaly Detection

- Developed an advanced fraud detection platform for SAP B1, leveraging **SQL Server, HANA DB, and stored procedures** for real-time anomaly detection.
- Integrated a **Python-based AI model** to automate real-time alerts to a **React-Native mobile app**, improving transaction security.
