EDUCATION

University of Texas at Dallas, USA

August 2024 - May 2026

Master of Science, Information Technology and Management [Program Excellence Scholarship]

GPA: 4.0/4.0

Coursework: Data Management, Business Data Warehousing, Cloud Computing Fundamentals, Advanced statistics for data science, Business Analytics with R, Data Visualization, Python.

Visvesvaraya Technological University, India

July 2018 - August 2022

Bachelor of Engineering, Electronics and Communication Engineering

SKILLS AND CERTIFICATIONS

Programming: Python, R, SQL, SAS, Java.

Database Tools: PostgreSQL, MongoDB, MS Visio, MySQL Workbench.

Visualization Analytics: Tableau, Power BI, Excel (Pivot Tables, Charts, Formulas), Data Storytelling, Report Writing.

Cloud & Data Engineering: AWS, Azure, GCP, Apache Airflow, Spark, Hive, HDFS, Databricks, Snowflake, ETL Pipelines.

Data Science and Machine Learning (ML) skills: Data Visualization, Data Warehousing, Data Storytelling, Machine Learning, Dashboard Development, Data Analysis, ETL, Excel VB Code, Report Writing.

Certifications: Basic Proficiency in Knime Analytics Platform, Salesforce AI Associate, Oracle Cloud Associate (2023).

PROFESSIONAL EXPERIENCE

Bellfast Management Private Limited, Bengaluru, India

February 2023 - June 2024

Data Analyst

- Developed a dynamic price recommendation engine for over 5,000 products in the FMCG sector, which automatically suggested daily product prices based on competitor pricing data gathered from 15+ cities. This intelligent pricing strategy significantly improved competitiveness and directly contributed to securing \$50M in funding for the client in 2020.
- Designed and automated a comprehensive ETL pipeline using Python to perform daily web scraping from 4–5 key competitors across multiple regions. The data was routed into an AWS-based data lake, enabling large-scale benchmarking and efficient downstream processing. Additionally, built a product matching pipeline using statistical and ML libraries to automate report generation and reduce manual workload by 80%.
- Built an interactive pricing analytics dashboard that visualized real-time competitor trends, pricing fluctuations, and product-level comparisons, supporting business decisions with actionable insights. Also developed a campaign validation system to proactively detect and eliminate pricing or promotional errors on client websites, ensuring campaign integrity.

Wipro Limited, Bengaluru, India

May 2022 - January 2023

Project Engineer

- Conducted root cause analysis for network protocol issues using Excel and Tableau, enhancing performance by 95%.
- Ensured accurate integration of system logs post-migration using Splunk, reducing inconsistencies and minimizing downtime.
- Documented procedures for issue diagnosis and contributed to standardized workflows for future troubleshooting tasks and visualized network behaviour using Power BI and Excel charts to support strategic decision-making by internal teams.

Wipro Limited, Bengaluru, India

March 2022 - May 2022

Data Engineer and Analytics Intern

- Automated ETL pipelines using AWS Redshift, Apache Airflow, improving data efficiency and reducing manual updates by 40%.
- Participated in team efforts to enhance data reliability and ensure adherence to compliance standards through proper record handling.
- Worked with business stakeholders to align onboarding data flow, resulting in smoother record transitions and increased retention.

PROJECTS AND VOLUNTEERING EXPERIENCE

Predictive Analytics for Car Insurance, UT Dallas

November 2024- December2024

- Developed predictive models (Decision Tree, Logistic Regression, Neural Networks) on 10,000+ consumer records, achieving 91% AUC in identifying high-risk insurance claims and built ML pipeline with feature engineering to improve insurance claim prediction.
- Built end-to-end ML pipeline with advanced feature engineering, boosting accuracy and efficiency of insurance claim predictions.

Pandemic Impact Analysis and Visualization for Texas schools, UT Dallas

August 2024 – September 2024

- Performed exploratory data analysis (EDA) and statistical modeling on Texas school funding, enrollment, and expenditures (2018–2023) using Python (Pandas, NumPy), SQL, and Tableau, identifying key financial trends influenced by the COVID-19 pandemic.
- Created interactive dashboards linking COVID-19 cases, school closures, and financial trends to inform education policy decisions.

Big Data Analytics on Truck Fleet Safety using Cloudera Ecosystem, UT Dallas

January 2025 – March 2025

- Analyzed large-scale geolocation data with Hive, HDFS, and Tableau to identify high-risk driving behaviors and improve fleet safety.
- Built a structured geolocation database, enabling insights that reduced accident risk and supported decision-making.

SAP Datasphere Bootcamp, SAP Germany

May 2025 – June 2025

- As a Teaching Assistant, supported hands-on training for 150+ Ph.D. professors on SAP Datasphere, guiding them through data modeling, ER design, SQL/graphical views, and dashboard creation using SAP Analytics Cloud.
