Profile Summary

Full Stack Developer 3+ years of experience, specializing in Java, Spring Boot and AWS Cloud Services. Proficient in designing and developing scalable, cloud-native applications using microservices architecture and RESTful APIs. Skilled in React.js, Redux, and JavaScript for building dynamic UIs, with expertise in backend development using Spring Boot, Hibernate, and databases. Strong experience in AWS and Azure DevOps, Docker, and DevOps Practices, ensuring seamless deployment and scalability. Adept at unit testing, UI testing, and agile methodologies.

Skills

Front-end Technologies: HTML5, CSS3, JavaScript, React.js, Redux, Angular, Bootstrap, Material-UI, Typescript

Back-end Technologies: Java, Spring Boot, Spring MVC, Hibernate, Maven, JDBC, JPC, J2EE, Spring Security, Microservices, Node.js, Express.js, Python, ASP.Net, C/C++, MVC Framework, RESTful APIs, GraphQL

Database Technologies: MySQL, MongoDB, PostgreSQL, SQL Server, Oracle, Firebase, Cassandra, Kafka, Redis

Cloud & DevOps: Git, Docker, Kubernetes, Jenkins, Microsoft Azure, Amazon Web Services (AWS), CI/CD Pipelines

Tools and Technologies: Selenium, Maven, Agile, Waterfall, Scrum, JIRA, Confluence, SDLC, JUnit, Postman, Swagger, Mockito, TestNG, Jest, SonarQube, Data Structures and Algorithms

Professional Experience

Full Stack Developer, *BigCommerce*

June 2024 – Present | Remote, USA

- Developed a high-performance e-commerce platform using Java (Spring Boot, Spring Cloud, Hibernate) and React.js (Redux, TypeScript), enabling seamless product catalog management, order processing, and checkout experiences.
- Optimized RESTful APIs for real-time communication between microservices and frontend applications, leveraging AWS API Gateway, DynamoDB, and third-party payment integrations, reducing transaction latency by 40%.
- Implemented authentication and security best practices, integrating OAuth 2.0, JWT, and Spring Security, while enhancing database efficiency with Hibernate Second-Level Cache and Redis, improving query performance.
- Orchestrated and automated deployments using Docker, Kubernetes (EKS), and AWS CodePipeline, streamlining CI/CD pipelines and reducing release cycles by 50%, ensuring high system availability and scalability.
- Integrated event-driven architecture with Apache Kafka and RabbitMQ, enabling real-time inventory synchronization, order tracking, and dynamic pricing updates, enhancing operational efficiency.

Full Stack Developer, *Auto BIM Route*

Jan 2024 – May 2024 | Tempe, USA

- Engineered a microservices-based data visualization platform using JavaFX, OpenGL, and Jackson, enabling real-time rendering of 1M+ JSON data points, improving performance and reducing application load time by 20%.
- Refactored a legacy WinForms application to a JavaFX-Spring Boot microservices architecture, ensuring scalability, modularity, and seamless PostgreSQL database integration.
- Implemented JUnit, Mockito, and TestContainers for automated unit, integration, and database testing, reducing post-deployment defects by 30% through CI/CD pipelines using Jenkins and GitHub Actions.
- Developed and deployed a Spring Boot-based MS Outlook plugin with RESTful APIs, hosted on AWS Lambda and integrated with S3, streamlining workflows and reducing user interaction steps by 60%.

Full Stack Developer, *Genpact*

July 2021 - July 2022 | Mumbai, India

- Developed a scalable enterprise application using Java, Spring Boot, Hibernate, and Microservices, improving performance by 35% and reducing API response time by 40% through optimized queries and caching.
- Built and integrated RESTful APIs and GraphQL services, enabling seamless communication between microservices while implementing OAuth 2.0, JWT, and Azure AD authentication, ensuring secure and compliant data exchange.
- Built a high-performance frontend with React, Redux, and TypeScript, improving UI responsiveness and optimizing rendering speed, leading to a 30% increase in user engagement.
- Designed and implemented scalable automation and real-time data processing on Azure using AKS, Azure Functions, Docker, Terraform, Apache Kafka, and WebSockets, achieving zero-downtime deployments and reducing release failures by 60%.
- Strengthened application reliability by implementing testing strategies with JUnit, Mockito, and Jest, achieving 95%+ test coverage, while integrating Prometheus, Grafana, and ELK Stack for proactive monitoring and faster issue resolution.

Software Developer, *Acidaes Solutions Pvt Ltd*

Sept 2020 – June 2021 | Mumbai, India

- Engineered a highly scalable microservices architecture using Spring Boot and Hibernate, enhancing modularity and reducing service downtime by 30% through efficient resource utilization.
- Secured RESTful APIs with OAuth2 and JWT authentication, enabling seamless integration with AI-powered chatbots and external CRM systems, reducing customer response time by 35%.
- Implemented a real-time analytics dashboard with React, D3.js, and WebSockets, delivering interactive data visualization and insights to 1,000+ business users, driving data-driven decision-making.
- Optimized database performance by fine-tuning MySQL queries, implementing Redis caching, and introducing Kafka for event-driven data processing, reducing query execution time by 40% and ensuring seamless performance for 5,000+ mobile users.
- Automated CI/CD pipelines with Jenkins, Docker, and Kubernetes, streamlining deployments across AWS infrastructure, achieving 99.9% system availability and accelerating release cycles by 50%.

Education

Master of Science, Arizona State University

Software Engineering

May 2024 | USA
