
WORK EXPERIENCE**Cognizant****Dec 2021 - July 2023***Junior Software Engineer**Hyderabad, India*

- Integrated APIs with front-end modules to ingest structured data for enterprise banking services, enhancing data accuracy and supporting trend analysis for informed decision-making.
- Collaborated with UI/UX teams in project management to ensure accessible design and seamless data presentation, aligning technical solutions with business insights and operational trends.
- Delivered production-ready UI and QA builds within Agile sprints; resolved 50+ UI/UX issues by analyzing API responses (JSON) to reinforce data integrity and improve responsiveness. Documented UI workflows, component logic, and QA test cases to support internal knowledge sharing and facilitate efficient onboarding, ensuring consistent application of data science principles.
- Enhanced real-time user interactions by debugging complex data-binding issues and eliminating rendering delays, contributing to clearer data visualizations and improved operational analysis.

TECHNICAL SKILLS**Programming Languages and Frameworks:** SQL, Python, R, C++, .Net, Angular**Analytics and Data Science Tools:** Power BI, Tableau, R Markdown, Matplotlib, Excel (Pivot Tables, VLOOKUP),**Database Management Systems:** MySQL

EDUCATION**University of Central Oklahoma****Aug 2023 - May 2025***Master of science in Data Science**Edmond, OK*

Coursework: Data Visualization, Applied Regression Analysis, Machine Learning, Data Mining, Applied Experimental Design

Gitam Deemed University**June 2018 - July 2022***Bachelor of Science and Technology in Computer Science and Engineering**Visakhapatnam, India*

Coursework: Object oriented programming in C++, Database management systems, Operating systems, Software Engineering UML

PROJECT EXPERIENCE**Education Performance Dashboard | Power BI**

- Sought to analyze a large educational dataset to explore student performance trends, program participation (ELL, AVID, SPED), and course enrollment patterns across different schools.
- Analyzed and developed an interactive Power BI dashboard using DAX and advanced visuals (line, bar, KPI, donut), integrating dynamic filters for schools, years, and course types to enable flexible exploration.
- Delivered an extensive dashboard that distilled thousands of student records into actionable insights, demonstrating the ability to handle large-scale datasets, streamline analysis, and communicate findings through compelling story-telling.

Customer Churn Analysis for Retail Bank | R, Random Forest, Logistic Regression

- Addressed a critical business challenge in retail banking by analyzing 10,001 customer records to pinpoint why clients were leaving and how to proactively intervene.
- Conducted EDA and Applied multiple classification techniques (Logistic Regression, LDA, QDA, decision trees, random forest) to evaluate churn risk with consistent predictive outcomes across the models.
- Identified key churn drivers such as credit card ownership, customer complaints, and satisfaction scores, translating findings into actionable insights for targeted retention initiatives.
- Shared analytical findings in a college project presentation, emphasizing the link between statistical results and actionable business decisions.

Semiconductor Market Analysis | R, t-tests, Chi-Square Test, Regression

- The global semiconductor industry shows wide disparities in market value across regions. The task was to evaluate 358 firms from 24 countries to identify geographic and industry-driven factors influencing competitiveness.
- Cleaned and structured the dataset; performed t-tests, chi-square tests, and regression analysis in R to evaluate differences in market capitalization, geographic dependencies, and correlations between company rank and market value.
- Delivered insights showing U.S. firms hold ~10x higher market cap than Taiwanese peers, uncovered geographic and industry dependencies, and quantified a -0.25 correlation between rank and value for investment strategy.

Generative AI Syllabus Chatbot | Python, Firebase, LLMs

- Developed an AI-powered chatbot using Generative AI and Retrieval-Augmented Generation (RAG) to transform static, scattered syllabi into an interactive, searchable resource that allowed students to quickly access essential course details.
- Collaborated with group team members and integrated PDF parsing, metadata extraction, and natural language generation to improve student access to course information.
- Scaled backend deployment via Firebase, allowing multi-course integration with minimal administrative overhead - laying the groundwork for institution-wide rollout.

LEADERSHIP / ACCOMPLISHMENTS

- **Head of Marketing | Computer Society of India | Gitam** : Led PR campaigns and team recruitment, showcasing leadership and communication skills; boosted engagement by 50%.
- **Public Relations | Computer Society of India | Gitam**: Coordinated 8+ tech events (200+ attendees) with effective organization, collaboration, and event management skills.
- **Data Science Simulation, Widhya**: Applied Python and Linear Regression to build predictive models, improving forecasting accuracy by 20% and delivering a high-accuracy Bitcoin price predictor.
