Location: Indore, India.

PROFESSIONAL SUMMARY: -

Experienced Python Developer with 6+ years of hands-on expertise in building scalable web applications, APIs, and backend systems using Django, FastAPI, and Flask. Skilled in integrating cloud services (AWS), streamlining CI/CD workflows, and working with cross-functional teams in Agile environments. Strong focus on code quality, automation, and performance optimization across backend and frontend layers.

TECHNICAL SKILLS: -

- **Languages:** Python, JavaScript
 - **Frameworks & Libraries:** Django, Django REST Framework (DRF), HTMX, Flask, FastAPI, Django CMS, ReactJS, jQuery, Bootstrap, Jinja Template Engine.
 - **Web Technologies:** HTML, CSS, REST API, GraphQL.
 - **Front-End Development:** ReactJS, JavaScript, jQuery, HTML, CSS, HTMX, AJAX, Redux, Bootstrap.
 - **Back-End Development:** Python, Django, Flask, FastAPI, REST API.
 - **Databases:** PostgreSQL, MySQL, MongoDB, Apache Cassandra.
 - **ETL & Data Tools:** Pandas, NumPy, Apache Airflow.
 - **Cloud & Serverless:** AWS (EC2, S3, RDS, Lambda, API Gateway).
 - **Infrastructure as Code:** Terraform, AWS CloudFormation.
 - **DevOps & CI/CD:** Git, GitHub, Bitbucket, Jenkins, AWS CodePipeline.
 - **Testing & QA:** Unit Testing, Integration Testing, Functional Testing, TDD, Selenium, CI/CD Automation.
- Tools & Collaboration:** JIRA, Sentry, PyCharm, VSCode, Agile Methodologies, Code Reviews, Team Mentoring.
-

PROFESSIONAL EXPERIENCE: -

BridgeFix Technology

Python Developer

Duration: April 2019 – Present

Work Description: Developed and maintained robust backend systems for web applications. Focused on clean architecture, scalable APIs, and team collaboration using Agile practices.

Responsibilities:

- Contributed to the development and optimization of web applications with Python and Django Rest Framework.
- Built and maintained scalable RESTful APIs, enhancing overall system performance.

- Worked closely with the team to integrate front-end functionalities using React for seamless user experience.
- Optimized the database structure and queries, improving system response time and scalability.
- Implemented unit and integration testing using PyTest and Selenium to ensure stability and code quality.
- Used JIRA for sprint planning and project tracking, ensuring timely deliveries in an Agile environment.

Technologies Used:

Python, Django, DRF, ReactJS, PostgreSQL, MySQL, AWS (EC2, S3), Git, Docker, PyTest, JIRA, HTML, CSS, Bootstrap

PROJECTS: -

Dental Analysis Platform

Duration: Sep 2024 – Present

Work Description: Dental Analysis is a comprehensive web application designed to analyze and visualize dental health data. The project provides insights into patient outcomes, treatment effectiveness, and operational efficiencies through advanced data analysis and visualization techniques.

Responsibilities:

- Designed and developed a web-based analytics system for dental clinics, supporting real-time patient insights.
- Utilized Django with Jinja templates for server-side rendering of dynamic content and forms.
- Integrated HTMX to enable seamless in-page updates and dynamic interactions without full page reloads.
- Used Django and DRF for backend logic, ReactJS with Chart.js for data visualization, and GraphQL for dynamic queries.
- Managed deployment using EC2, automated database backups with AWS S3, and enhanced reliability with autoscaling.
- Created custom role-based access control (RBAC) and session management systems.
- Conducted load testing and performance profiling to ensure stability under concurrent access.

Technologies Used:

Django, DRF, RESTAPI, HTMX, Jinja templates, JavaScript, ReactJS, Python, Git, GitHub, AWS EC2, S3, RDS (MySQL), MySQL, AWS, Selenium, RabbitMQ, Pandas, FastAPI, ETL, Docker.

Well Choice - Health Application

Duration: June 2023 – August 2024

Work Description: Developed a health and fitness app backend offering customized diet plans and nutrition insights for gym clients.

Responsibilities:

- Built backend using Django REST Framework, integrated with PostgreSQL for robust data handling.

- Created and optimized multiple APIs to improve performance and enhance user experience.
- Used Django-Celery to automate email communication and background tasks
- Configured CI/CD pipelines using GitHub Actions and Jenkins to streamline delivery and testing processes.
- Utilized Apache Airflow for scheduling ETL jobs and enhancing data workflow automation.

Technologies Used:

Python, Django, DRF, PostgreSQL, Celery, ReactJS, Apache Airflow, GitHub, Jenkins, PyTest, AWS Lambda, API Gateway

Inteer

Duration: Feb 2021 – May 2023

Work Discription: Built secure, scalable backend systems using Python, Django REST, and PostgreSQL. Led development teams and automated AWS infrastructure with Terraform. Integrated Celery, OAuth/JWT auth, and CI/CD security testing.

Responsibilities:

- Worked on Python, Django Rest framework with use of Postgres Database, ORM and SQL Queries.
- Integrated third party package like Django-Celery to send emails.
- Implemented security measures such as encryption and secure authentication methods (OAuth, JWT) to ensure the protection of sensitive data.
- Created custom hooks for reusable logic and code organization, reducing duplication and enhancing code maintainability.
- Integrated automated security testing into the CI/CD pipeline to catch potential vulnerabilities early in the development lifecycle.
- Led team of software engineers undertaking the software development client projects.
- Implemented Infrastructure as Code (IaC) using Terraform to automate the provisioning and management of AWS resources, including EC2 instances, S3 buckets, RDS databases, and Lambda functions, ensuring consistency across multiple environments and improving deployment efficiency.

Technologies Used:

Python, Django, DRF, Celery, Redis, AWS

Quick Heal Cybersecurity

Duration: April 2019 – Jan 2021

Work Description: Quick Heal is a real-time malware detection system that enhances cybersecurity with monitoring, data processing, and storage capabilities in the cloud. It features a monitoring dashboard for data analysis and reporting.

Responsibilities:

- Built a real-time malware detection dashboard using Elasticsearch, AWS Lambda, and ReactJS.
- Implemented ETL workflows using AWS Glue and automated reporting via scheduled tasks.
- Enforced secure coding practices, OWASP-compliant designs, and data encryption at all storage layers.

- Developed anomaly detection logic using Python and AWS Kinesis for continuous monitoring.

Technologies Used:

ReactJS, AWS, AWS Glue, Elasticsearch, SQL, Python, ETL, Cloud Computing

EDUCATION:**Bachelor of Commerce ([B.Com](#))**

Shri Atal Bihari Vajpayee Govt. Arts and Commerce College
