PROFFESIONAL SUMMARY:

- **Data Analyst with 5+ years** of experience delivering actionable insights across healthcare, banking, insurance, and IT industries for clients such as Maine Healthcare, Barclays Bank, and Wipro Information Technology.
- Expert in SQL Server 2019/2022, writing complex T-SQL queries, stored procedures, CTEs, views, and functions to support advanced data processing workflows.
- Created enterprise dashboards using Power BI (2019–2024) with drill-downs, bookmarks, and real-time KPIs, tailored for clinical, risk, and operations teams.
- Proficient in DAX for building measures and time intelligence functions (YOY, MTD, YTD), enabling robust financial and patient outcome analytics.
- Automated ETL workflows using SSIS 2019/2022 for integrating healthcare claims, risk data, and compliance feeds into centralized SQL data warehouses.
- Integrated Azure Synapse Analytics and Azure Data Factory (2022–2025) with Power BI to support cloud-scale data analytics for financial and healthcare clients.
- Led HIPAA-compliant BI solutions at Maine Healthcare, ensuring role-based access via Power BI Row-Level Security (RLS) and data masking.
- Analyzed EHR/EMR systems (Epic, Cerner) to improve patient satisfaction metrics and hospital performance KPIs with Power BI visualizations.
- Developed Basel III, MiFID II, and IFRS 9 compliance dashboards at Barclays using SQL and SSRS, supporting regulatory and audit reporting.
- Conducted AML and KYC analysis with Power BI for fraud detection and customer profiling using structured banking datasets at Barclays.
- Modeled dimensional schemas (star/snowflake) to support OLAP and OLTP systems, improving performance and accuracy in BI reporting.
- Built dashboards tracking investment performance, P&L, and risk-weighted assets (RWA) using Power BI, Excel 365, and SQL Profiler.
- Automated reporting pipelines for Wipro IT clients, merging global data from flat files, Excel, Oracle, and REST APIs into SQL Server.
- Created healthcare utilization dashboards using Python 3.11 (pandas, NumPy, matplotlib) to identify care gaps and resource optimization.
- Optimized query performance using SQL Profiler, Query Store, and execution plans, improving dashboard load times by up to 40%.
- Integrated SharePoint, Azure Blob Storage, and Power BI Gateway for hybrid data access in real-time operational dashboards.
- Conducted predictive analysis using regression, clustering, and forecasting models for patient readmission, churn, and revenue trends.
- Collaborated with cross-functional teams (finance, IT, compliance) to translate business needs into scalable analytics solutions using Agile/Scrum methodologies.
- Maintained documentation in Confluence, supported development lifecycle through Azure DevOps, and tracked deliverables in JIRA.
- Up-to-date with 2025 BI trends, continuously learning via certifications in Power BI, Microsoft Fabric, cloud data architecture, and data governance.

EDUCATION:

Master's in Business Analytics at **THE UNIVERSITY OF TEXAS** || **AUG 2022 - MAY 2024**

Technical Skill:

Data Visualization & BI	Power BI (2019–2024), Power BI Service, DAX (Data Analysis Expressions), M Language (Power Query), RLS, Bookmarks
SQL & Database Development	SQL Server 2019/2022, T-SQL, OLTP/OLAP systems, Stored Procedures, Views, Functions, SQL Profiler, Query Store
ETL & Data Integration	SSIS 2019/2022, Azure Data Factory, Data Flows, REST APIs, Flat Files, Excel, XML, JSON
Cloud & Big Data	Azure Synapse Analytics, Azure SQL Database, Azure Blob Storage, Azure DevOps, Data Lakes, Cloud Pipelines
Programming Languages	Python 3.10/3.11 (pandas, NumPy, pyodbc, matplotlib), M (Power Query), T-SQL, DAX
Reporting & Compliance	SSRS 2019/2022, Excel 365, Data Governance, GDPR, HIPAA, KYC/AML, Data Auditing, Data Validation Rules

PROFESSIONAL EXPERIENCE:

Role: BI Data Analyst

MAINE HEALTHCARE, PORTLAND, MAINE||APR 2024 - TILL DATE

At Maine Health, I worked as a Data Analyst supporting clinical, financial, and operational teams by developing SQL-based reports and Power BI dashboards. I analysed EHR data from Epic and Cerner to drive insights on patient outcomes, population health, and care quality. My work aligned with HIPAA standards and contributed to value-based care initiatives across the healthcare network.

Responsibilities:

- Developed dynamic, patient-focused dashboards using Power BI 2024 version to monitor clinical KPIs, readmission rates, and appointment wait times.
- Designed complex DAX measures to support advanced time intelligence, rolling averages, and cohort analyses across service lines.
- Extracted, transformed, and loaded healthcare data using SQL Server 2022, integrating data from EMR systems, claims data, and third-party APIs.
- Built automated ETL workflows using Azure Data Factory to manage high-volume datasets from Epic, Cerner, and lab systems.
- Integrated FHIR and HL7 data into reporting pipelines to ensure compliance with interoperability standards across departments.
- Created and maintained star and snowflake schema data models to support high-performance analytics and dashboarding.
- Conducted root cause analysis on patient safety incidents, appointment delays, and medication adherence issues using SQL and Power BI visuals.
- Developed SSRS 2022 reports for compliance tracking, Medicare/Medicaid utilization, and hospital-acquired condition monitoring.
- Collaborated with care teams and administrators to define reporting needs for CMS, HEDIS, and HIPAA compliance.
- Built Python-based tools (using Python 3.11, pandas, and matplotlib) for trend analysis, patient volume forecasting, and risk stratification.
- Ensured data privacy and PHI protection in accordance with HIPAA and internal information security policies.
- Implemented row-level security (RLS) in Power BI for role-based access by clinicians, administrators, and external auditors.
- Created self-service Power BI datasets and data marts to enable clinical managers and business users to explore patient data independently.
- Integrated Azure Synapse Analytics to scale data warehousing and perform distributed queries on millions of medical records.
- Conducted geospatial analysis using Power BI's ArcGIS integration to visualize access to care and disparities in service delivery.
- Partnered with population health and case management teams to build dashboards for chronic condition monitoring and care gap identification.

- Used Power Query (M language) for advanced data shaping, parameterized reporting, and merging of complex datasets.
- Documented ETL processes, data dictionaries, and dashboard specifications using Confluence and Azure DevOps for audit-readiness.
- Participated in Agile teams with data engineers and clinicians to deliver iterative enhancements to BI tools and performance reports.
- Presented executive-level insights to senior leadership through storytelling with data, interactive visuals, and benchmarking dashboards.

Environment: Power BI 2024, SQL Server 2022, SSRS 2022, Azure Synapse Analytics, Azure Data Factory, Python 3.11, FHIR/HL7 APIs, Excel 365, Confluence, Azure DevOps.

Role: SQL Data Analyst

BARCLAYS BANK, WILMINGTON, DELAWARE || FEB 2023 - MAR 2024

Barclays Bank is a British multinational financial institution offering retail, corporate, and investment banking services globally. Founded in 1690, it has a long history of innovation, including launching the world's first ATM. Today, it focuses on digital transformation, sustainability, and global financial services.

Responsibilities:

- Wrote and optimized advanced T-SQL queries using SQL Server 2019/2022 to extract, manipulate, and analyze large financial datasets for risk and fraud analytics.
- Developed complex stored procedures, views, and functions to automate data extraction and transformation for compliance reporting.
- Built and maintained interactive dashboards using Power BI (2023) for visualizing credit risk exposure, revenue trends, and operational KPIs.
- Automated data pipelines with SSIS 2019/2022, integrating data from Oracle, Excel, and flat files into the central data warehouse.
- Generated scheduled and ad hoc reports using SSRS 2019, supporting internal audit and regulatory reporting teams.
- Created normalized and dimensional data models (star/snowflake) to support analytics across OLTP and OLAP systems.
- Used SQL Profiler and Query Store for performance tuning and optimization of queries used in high-volume transactional environments.
- Worked with Azure Synapse Analytics to manage and analyze large volumes of structured banking data in a scalable, cloud-based environment.
- Partnered with compliance and legal teams to develop SQL logic supporting MiFID II, Basel III, and IFRS 9 regulatory frameworks.
- Utilized Python 3.11 (with pandas, pyodbc) for batch data processing, trend analysis, and customer segmentation workflows.
- Implemented data validation rules, integrity constraints, and referential checks to ensure high-quality datasets for reporting and analytics.
- Collaborated with business analysts, finance, and credit risk teams to translate requirements into SQL-based reporting solutions.
- Created ETL frameworks and audit logs to ensure traceability, transparency, and data governance compliance across Barclays systems.
- Developed audit-ready reports for AML (Anti-Money Laundering) and KYC (Know Your Customer) processes using SQL and Power BI.
- Ensured data privacy and security in compliance with GDPR and Barclays' internal data protection policies.
- Documented SQL scripts, data models, and report logic using Confluence and Azure DevOps for cross-functional collaboration and version control.
- Conducted variance analysis on trading volumes, fee income, and risk-weighted assets (RWA) using SQL and advanced Excel.
- Participated in Agile/Scrum development cycles, contributing to sprint planning, backlog refinement, and delivery of data solutions.
- Integrated and transformed data from Barclays' core banking platforms using Azure Data Factory and Power BI Gateway.
- Presented analytical findings to senior stakeholders using data storytelling, charts, and executive dashboards in Power BI and Excel 365.

Environment: SQL Server 2019/2022, Power BI (2023), SSIS, SSRS, Azure Synapse Analytics, Azure Data Factory, Python 3.11, Excel 365, Oracle, Confluence, Azure DevOps.

Role: Data Analyst

WIPRO, HYDERABAD, TELANGANA|| JUNE 2019 – JULY 2022

At Wipro, delivered end-to-end data analytics solutions by developing complex SQL queries, automating ETL processes, and building interactive Power BI dashboards. Supported global clients across banking, healthcare, and telecom sectors. Focused on data governance, performance optimization, and actionable business insights.

Responsibilities:

- Wrote and optimized complex SQL queries using SQL Server 2019/2022 to extract, transform, and analyze enterprise-level transactional data.
- Developed advanced Power BI 2019/2022 versions dashboards with slicers, bookmarks, drill-throughs, and tooltips to visualize KPIs and trends for business stakeholders.
- Created custom DAX measures for time-series analysis, rolling averages, and year-over-year comparisons in financial and operational reports.
- Designed and executed ETL processes using SSIS 2019, integrating data from flat files, Excel, Oracle, and cloud-based sources into SQL Server databases.
- Generated ad hoc and scheduled reports using SSRS 2019, enabling daily, weekly, and monthly insights into operational performance.
- Modelled data using star and snowflake schemas for efficient reporting and scalability across business units.
- Developed Python scripts in Python 3.10/3.11 using Pandas and NumPy for data cleaning, transformation, and exploratory data analysis (EDA).
- Integrated Power BI with data sources such as Azure SQL Database, Excel, REST APIs, and SharePoint for seamless business reporting.
- Ensured data quality and integrity by conducting data validation, profiling, and deduplication across multiple systems.
- Collaborated with functional teams (HR, finance, sales) to gather reporting requirements and translate them into actionable insights.
- Implemented row-level security (RLS) in Power BI to ensure secure and role-based access to sensitive business data.
- Optimized long-running queries using SQL indexing, query plans, and stored procedures, improving performance by up to 40%.
- Worked with OLTP and OLAP systems to support both transactional analysis and multidimensional reporting needs.
- Participated in Agile sprints, backlog grooming, and daily standups, ensuring iterative and timely delivery of analytics solutions.
- Used Visual Studio 2019/2022 and SQL Server Data Tools (SSDT) for development and deployment of BI projects.
- Created and maintained technical documentation including data dictionaries, ETL workflows, and Power BI usage guides.
- Provided business users with self-service BI tools and trained them on using Power BI for ad hoc reporting.
- Ensured data privacy and compliance with GDPR and internal IT security policies while handling sensitive enterprise data.
- Conducted root cause analysis using SQL and Power BI to resolve data anomalies and support strategic business decisions.
- Collaborated with data engineers and architects on Azure Data Factory and Synapse Analytics to support scalable data architecture for clients.

Environment: SQL Server 2019/2022, Power BI (2019–2022), SSIS 2019, SSRS 2019, Visual Studio 2019/2022, Python 3.10/3.11, Azure SQL Database, Azure Data Factory, Synapse Analytics, SharePoint, REST APIs.
