EDUCATION

Northeastern University

Master of Science in Computer Science

University at Buffalo

Bachelor of Science in Computer Science

January 2024 - December 2025

Boston, MA

September 2020 - December 2023

Buffalo, NY

TECHNICAL SKILLS

Languages : Python, Java, JavaScript, TypeScript, C/C++, Scala, Swift, Kotlin

Frameworks/Libraries : React, Node.js, Flask, Electron, Express, Socket.io, Bootstrap (CSS)

Cloud & DevOps: AWS (IAM, EC2, S3), Azure (OpenAI, Cloud Services), DigitalOcean

Databases: MySQL, SQL, MongoDB, Firebase

Other Tools/Concepts: Docker, Kubernetes, CI/CD pipelines, Agile/Scrum, Figma, OOD, MVC, GitHub, Jira, REST

WORK EXPERIENCE

NSBOT

November 2024 - May 2025

Software Engineering Intern

Remote

- Built scalable Kotlin/Node.js microservices with Azure OpenAI, reducing response time by 70%.
- Integrated RESTful APIs with AWS S3/Azure to securely manage 100+ hours of media data.
- Enhanced video calling app with event-driven microservices (WebSockets + ReactJS) for transcription.
- Supported production stability by remediating pipeline failures and optimizing cloud deployments.

University at Buffalo, ADAM's Lab

October 2022 - August 2023

Research Assistant

Buffalo, NY

- Applied C++/Python in Linux environments to design and optimize algorithms, improving system accuracy by 50%.
- Automated data logging and system scripts, saving ~5 hours per week and improving reproducibility.
- Used object-oriented design to modularize code for maintainability and future extension.

RELEVANT PROJECTS

Learning Management Application

January 2025 - April 2025

- Designed and deployed a MERN application for course/quiz management with CI/CD via GitHub Actions.
- Deployed across Netlify/Render with MongoDB Atlas, simulating secure multi-cloud deployment.

Note Taking Application

September 2023 - December 2023

- Developed a cross-platform Electron/React/Node.js app for markdown-based note storage.
- Delivered in Agile sprints, reaching ~90% feature completion through iterative testing.

Live Auction Web Application

February 2023 - May 2023

- Engineered an event-driven bidding platform with Flask, JavaScript, and MongoDB.
- Containerized with Docker and deployed on DigitalOcean for a production-ready demo.

Virtual Stock Simulation Software

February 2023 - May 2023

- Created a Java MVC trading simulator with CLI and GUI options for usability.
- Applied JUnit testing and OOD to ensure robust and maintainable design.
