Education

NEW YORK INSTITUTE OF TECHNOLOGY

Sep 2022 – May 2024

Master of Science in Computer Science

NY, USA

- **Relevant Courses:** *Operating Systems, Algorithm Concepts, Computer Architecture, Principles of Information Security, Software Engineering, Database Systems, Theory of Computation, Data Mining, Big Data.*

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY

Aug 2017 – Aug 2021

Bachelor of Technology in Computer Science and Engineering

Anantapur, India

- **Relevant Courses:** *Data Structures, Object Oriented Programming, Design Analysis of Algorithms, Operating Systems, Software Engineering Architecture, Unix Shell Programming, Web Technologies, Database Management Systems.*

Technical Skills

- **Languages:** Java, Python, JavaScript, C, C++, SQL, HTML, CSS, Bash
- **Cloud Technologies:** AWS (S3, EC2, Lambda, Glue, DynamoDB, Redshift, Cloudwatch, Route 53, SNS, SimpleDB), Azure (DevOps, Pipeline), PCF
- **API & Web Services:** REST, JSON, SOAP, Swagger, Postman, XML
- **Data Engineering & ETL Tools:** PySpark, Spring Batch, SAP BODS, Boto3
- **Distributed Systems:** AWS Glue, Apache Kafka, ActiveMQ, Spark
- **Databases:** PostgreSQL, Oracle MongoDB, DynaamoDB, Amazon Redshift
- **Data Modeling & BI Tools:** Hibernate/JPA, ER Modeling, Matplotlib, Pandas, NumPy
- **DevOps & Tools:** Git, Maven, Jenkins, Docker, JIRA, Agile, Selenium, JUnit, Mockito

Experience

Software Developer - Gait Solutions

Sep 2024 – Present

- Developed scalable Java/J2EE applications using modular architecture and built RESTful APIs with Spring MVC, integrating with front-end and third party systems to improve performance and enhance error handling.
- Enhanced user interfaces with AngularJS, HTML, CSS, and JavaScript, implementing lazy loading and optimized Document Object Model rendering for mobile-friendly and cross-browser compatibility.
- Integrated AWS EC2, S3, and SimpleDB with Java applications using the AWS SDK, and automated infrastructure provisioning using scripts and deployment pipelines.
- Implemented CI/CD pipelines using Jenkins and Git to automate build, test, and deployment workflows, and designed relational and NoSQL schemas in PostgreSQL, Oracle, and MongoDB with indexing and query tuning.

Java Developer - Data Techno

Jan 2021 – Aug 2022

- Designed scalable backend modules using Java, Spring Boot, and Hibernate to support real-time data workflows, and developed Request for Proposal and Tracker Reports using Spring MVC, JSP, and Query for improved internal operations.
- Built responsive front-end components using ReactJS, HTML, CSS, and AJAX, and developed secure RESTful APIs with Spring Security using OAuth2 and JWT-based authentication for role-specific access control.
- Enabled asynchronous communication using Kafka and ActiveMQ for decoupled architecture, and deployed microservices to PC using Jenkins pipelines integrated with GitHub for automated releases.
- Managed AWS infrastructure including EC2, S3, ECS, Lambda, DynamoDB, and Route 53 using AWS SDK aid scripting, and integrated monitoring tools like CloudWatch and Prometheus to track production system metrics.
- Optimized queries in PostgreSQL and Oracle through indexing and normalization for high-throughput reporting, and participated in Agile ceremonies while collaborating with QA, Product, and DevOps teams.
- Delivered 90 percent unit and integration test coverage using JUnit and Mockito with TDD principles, and conducted code reviews while mentoring inor developers in Spring framework and Git workflows.
- Automated end-to-end CI/CD processes using Jenkins, Docker, and Azure DevOps for consistent deployments, and implemented SOAP integrations using Node.js and XML to support legacy backend systems.
- Migrated enterprise workloads to Azure using Azure Pipelines with a focus on maintaining data integrity, and created design documents, API contracts, and flowcharts while using Swagger and Postman for documentation.

Academic Projects

Traffic Volume Prediction Using Machine Learning — NYIT | *Python, Pandas, Scikit-Learn, Matplotlib*

- Created a regression-based ML pipeline to predict hourly traffic using environmental and temporal features, improving baseline accuracy by 12 percent.
- Trained and tuned models using GridSearchCV, visualized patterns via heatmaps and Matplotlib, and structured project for future API deployment.

Serverless Data Lake Pipeline | *AWS Glue, Lambda, S3, PySpark, EventBridge*

- Designed a serverless ETL pipeline using AWS services to automate CSV to Parquet transformation, integrating S3-triggered Lambda with Glue Crawlers and EventBridge for orchestration.
- Developed PySpark scripts for data cleansing, stored output in S3, and enabled SNS-based success/failure alerts to ensure observability and end-to-end scalability.

E-Commerce Platform | *MongoDB, Express.js, Node.js, HTML, CSS, Bootstrap*

- Built a full-stack e-commerce application with product listings, checkout, and admin dashboard using JWT-based authentication and RESTful APIs in Express.js and Node.js.
- Designed responsive UI using Bootstrap and HTML/CSS, modeled MongoDB with Mongoose, and modularized routes and controllers for clean architecture.

Exam Hall Seating Arrangement System | *MongoDB, Express.js, Node.js, Angular*

- Developed a web platform to automate seat allocation with role-based access, dynamic Angular forms, and real-time CRUD operations for students and halls.
- Implemented backend logic in Node js to ensure un J, seat mapping, normalized MongoDB schema, and generated printable seating plans with hall analytics.
