Education

Northeastern University

Master of Science in Health Informatics

Sumandeep Vidyapeeth

Doctor of Pharmacy

Sep 2023 – May 2025

Boston, MA

Aug 2017 – May 2023

Vadodara, India

Experience

Leapfrog

Data Analyst

Jan 2025 - Apr 2025

Washington D.C

- Facilitated value-driven decision-making for healthcare purchasers by building dashboards that highlighted metrics, such as infection prevention and maternity care benchmarks, advancing Leapfrog's mission to improve healthcare quality.
- Demonstrated strong analytical and technical skills by designing dashboards that visualized hospital survey data, fostering transparency and empowering stakeholders with actionable healthcare insights.
- Developed AWS QuickSight dashboards for 2,200+ hospitals, improving Leapfrog's analysis of infection rates, maternity care, and surgical volumes to enhance patient safety and quality.
- Implemented automated reporting in AWS QuickSight, streamlining the delivery of key performance metrics to stakeholders, reducing reporting time by 23% and enhancing data accessibility for informed decision-making.

Quantum Pulse Consulting

Data Scientist

Sep 2024 – Dec 2024

Detroit, MI

- Built a responsive front-end with React, improving user interaction and boosting operational efficiency by 27% for a high-demand client.
- Managed full-stack integration between React, Django APIs, and PostgreSQL, increasing system reliability and customer satisfaction by 15%.
- Designed and implemented APIs with Django, enhancing portal performance and strengthening data security, resulting in a 23% improvement in system resilience for Kymani Management Group.
- Developed interactive dashboards in Tableau, enhancing data-driven decision-making and reducing reporting time by 37%.

Dartmouth Medical Center

Data Analyst

May 2024 – Aug 2024

Lebanon, NH

- Implemented machine learning models like KNN and SVM using R, increasing tumor classification accuracy by 15% to support cancer diagnosis.
- Managed and optimized large datasets using SQL from TCGA and TCIA, reducing query execution time by 25% for faster cancer research analysis.
- Automated machine learning pipeline for data preprocessing, model training, and evaluation, reducing manual effort and speeding up experimentation.
- Performed EDA in R using ggplot2 and dplyr, identifying key patterns and anomalies to enhance data cleaning and feature selection for better model performance.

Projects

Crime Trend Analysis in Boston | *SQL, Tableau, GitHub* | [Github Link](#)

- Developed interactive Tableau dashboards for crime data analysis, incorporating geospatial mapping, trend analysis, and comparative studies to support law enforcement in crime prevention and resource management strategies.

Hospital Quality Analysis using R | *R, Github* | [Github Link](#)

- Developed an end-to-end R project encompassing multiple analyses, including hospital quality, heart rate trends, pollution levels, COVID-19 visualization, and statistical inference, focusing on data cleaning, visualization, and actionable insights across diverse domains.

DNA Classification using Python | *Python, Jupyter notebook, Github* | [Github Link](#)

- Designed and implemented an end-to-end DNA classification pipeline using Python, incorporating data preprocessing, exploratory data analysis, and machine learning models to classify DNA sequences with 79% accuracy, while visualizing genomic patterns and optimizing model performance for actionable insights in bioinformatics.

Technical Skills

Languages: Python, R, SQL, PostgreSQL, Flutter, HTML/CSS

Developer Tools: Tableau, QuickSight, Excel, VS Code, Power Bi, Figma.

Technologies/Frameworks: Linux, GitHub, Django, React.

Healthcare and Interpersonal Skills: Patient Satisfaction, SNOMED, Regulatory Compliance, Patient Privacy, FHIR, Data Standards, ICD-10, HEOR, HL7, HIPAA, Clinical Documentation, Statistical Modeling, Real world Evidence.
