PROFESSIONAL SUMMARY

I'm a **Data Analyst** with a background in Data Analysis and IT Asset Management, where I've built dashboards, automated reports, and worked with tools like SQL, Power BI, Tableau, and Python to support business decisions. I enjoy making complex data easier to understand and collaborating with different teams to solve problems. Formerly, I worked as a Big Data Engineer Trainee, creating tools and apps using Spark, MySQL, and Flutter. With my experience as a Device Associate at Amazon, I have developed my testing skills to test and validate applications. I'm comfortable working across the full data pipeline, from gathering and cleaning data to visualizing it in ways that drive action.

SKILLS

- Data Analysis & Visualization: Power BI, Tableau, Excel (PivotTables, VLOOKUP, XLOOKUP charts)
- Programming & Scripting: SQL, Python
- Big Data & Processing: Spark, Hive, Hadoop
- Databases: MySQL, MongoDB
- Data Cleaning & Automation: Excel Power Query, Python (Pandas), low-code tool SharePoint
- Collaboration & Tracking: JIRA, Monday.com
- UI Development & Design: Flutter, Figma
- Environments & IDEs: VS Code, IntelliJ, Android Studio, Linux, Jupyter Notebook
- Testing & QA: Manual Testing
- Certifications: Google Data Analytics Professional Certificate

EDUCATION

Bachelor of Technology | Electrical and Electronics Engineering August 2016
University of Kerala, Trivandrum, Kerala, India

WORK HISTORY

IT ASSET MANAGEMENT ANALYST Oct 2022 to Dec 2024
HCLTech | Cincinnati, Ohio, USA

- Maintained and updated hardware inventory using CMDB and ServiceNow, ensuring data accuracy and lifecycle compliance.
- Performed regular audits via **Smartaudit (Hamaudit sheet)** and internal audit trackers to identify Installed, In stock, missing, decommissioned, pending decommissioned or reassigned assets.
- Used **Excel** and **Power BI** to create clear, actionable reports on asset inventory, compliance, and utilization trends for leadership.
- Coordinated with teams across the company via **Outlook** and **ServiceNow** to handle asset requests, disposals, and reallocations smoothly
- Documented processes and created SOPs using **Word** and internal tools to support audits and standardize asset management practices.

- Maintained detailed spreadsheets and worked with internal apps to keep track of purchase orders, warranties, and asset assignments.

BIG DATA ENGINEER TRAINEE

July 2022 to Oct 2022

Revature | USA

- Constructed, tested and implemented a single page Ecommerce CLI application using Python-3.
- Created Python program to generate data sets with hidden trends.
- Obtained and imported data from website and stored in AWS S3 bucket.
- Prepared data for predictive and prescriptive modelling.
- Collaborated with another team to use data and handled their raw data using data processing transformations and algorithms to create predefined data structures.
- Utilized spark SQL to create queries to find trends in the data.
- parsed data from a .csv file to spark dataframe.
- Implemented data visualization strategies to meet the expectations using Tableau and Matplotlib.
- Managed version control using GitHub to sort, track and to collaborate on project.

DEVICE ASSOCIATE

December 2021 to March 2022

Amazon Development Center | Chennai, Tamil Nadu, India

- Tested and analyzed *Kindle* application to improve performance and reliability for 11 marketplaces.
- Created and executed an average of 150 test cases per day to cover new feature testing.
- Stacked materials to identify areas of improvement and collaborate with unit process teams to address deficits.
- Analyzed and developed innovative resolutions for complex problems.
- Performed failure analysis to determine root causes of reliability failures.

DATA ANALYST

Aug 2016 to November 2021

Hash Include | Trivandrum, Kerala, India

- Analyzed user and transaction data from **Payd** (digital payments) and **Heydoo** (delivery), using **SQL** and **Python** to uncover trends and address performance issues.
- Built and maintained 8+ **Power BI dashboards** to help teams monitor KPIs and make timely, data-driven decisions.
- Partnered with developers and product managers to align features with user behaviour insights, improving product usability and feature adoption.
- Investigated recurring data issues and ensured cleaner reporting and a smoother user experience.
- Translated real-world data into meaningful stories that supported better product and business decisions.
