

Nithin Pasam | Java Full Stack Developer

Kansas, USA | +1(505)-410-1598 | pasamnithin727@gmail.com | [LinkedIn](#)

SUMMARY

Full Stack Java Developer with 5+ years of experience across the SDLC, delivering secure and scalable applications using Java, Spring Boot, Hibernate, Angular, React, and microservices. Skilled in building and securing RESTful APIs with Spring Security and JWT, optimizing SQL/NoSQL databases, and deploying cloud-native solutions on AWS and Azure with containerized workloads on Docker and Kubernetes, integrated into CI/CD pipelines (Jenkins, GitHub Actions). Experienced in Agile environments, handling production support and on-call issue resolution, while improving reliability through performance tuning, monitoring, and troubleshooting.

TECHNICAL SKILLS

Frontend: Angular (NgRx), ReactJS (Redux), Broadleaf, Thymeleaf, JavaScript/TypeScript, HTML5, CSS3

Backend & Frameworks: Java (J2SE/J2EE, Servlets, JSP, JDBC, JMS, JPA), REST/SOAP/GraphQL, microservices, Spring (Core, Boot, Web, MVC, Security, Batch, AOP, JDBC, Data JPA/Mongo, Cloud)

Cloud & DevOps: AWS (EC2, RDS, S3, VPC, Lambda, API Gateway, CloudFormation, CloudWatch, ECS, EKS, Elastic Beanstalk, CodeDeploy, CodePipeline, Route53, CloudFront, Auto Scaling, SQS, SNS), MS Azure, Terraform, OpenShift, Docker, Kubernetes, ArgoCD, Helm

Databases: PostgreSQL, Oracle, MySQL, MSSQL, PL/SQL, MongoDB, DocumentDB, Redis, Cassandra

CI/CD & Security: Jenkins, GitHub Actions, GitLab CI, SonarQube, Fortify, Checkmarx, Trivy, Anchore, Aqua Security

Monitoring & Observability: Spring Actuator, Prometheus, Grafana, ELK Stack, Splunk

Messaging & Streaming: Kafka, Axon

Build & Servers: Maven, Gradle, Ant, Apache Tomcat, WebSphere, WebLogic

Testing & Debugging: JUnit, Mockito, PowerMock, Selenium, React Testing Library, Cypress, JMeter, JProfiler, JVisualVM, JConsole

Collaboration & Tools: Agile/Scrum (Jira, Rally, Confluence), UML (Visio, Rational XDE), Postman, SOAPUI, TOAD, WinSCP, PuTTY, VMware, GitHub Copilot, Amazon Q

Operating Systems: Windows, Linux, Unix

EXPERIENCE

Java Full Stack Developer

Sep 2024 - Present

J.P. Morgan Chase | Kansas, USA

- Design and develop full-stack applications using Java, Spring Boot, microservices, Angular, and React, delivering secure, scalable, and high-performance solutions.
- Create and maintain RESTful APIs and microservices to integrate with internal and cloud platforms, optimizing for reliability and long-term maintainability.
- Contribute to Agile workflows through stand-ups, sprint planning, code reviews, and JIRA user story grooming with business stakeholders, ensuring timely delivery of features aligned with business goals.
- Troubleshoot and debug complex production issues, applying best practices for performance tuning, security, and compliance with operational standards.
- Lead architectural decisions to migrate monolithic applications to microservices using Spring Boot, Spring Cloud Config, and Kafka for event-driven communication.
- Implemented CI/CD pipelines (Jenkins, GitHub Actions) with code quality checks (SonarQube) and deployed containerized apps on Kubernetes; built event-driven microservices with Kafka, reducing latency by 20% and improving MTTR by 25%.
- Designed serverless microservices using AWS Lambda and API Gateway for event-driven workflows, reducing infrastructure overhead and improving scalability.
- Apply circuit breaker and retry patterns using Spring Cloud, preventing cascading failures and improving overall system uptime to 99.95%.
- Define and monitor SLIs (latency, availability, error rate) using Prometheus and Grafana, set SLOs aligned with business goals, and ensure compliance with SLAs by consistently maintaining 99.9% uptime for critical services.
- Mentored junior developers and collaborated with cross-functional teams (QA, DevOps, and Product Owners) to accelerate feature delivery and enforce best practices in code quality, security, and system design.

Java Full Stack Developer

Dec 2021 - Jul 2023

TCS | India

- Developed and maintained RESTful APIs and microservices using Java (Spring Boot), resulting in improved backend scalability and a 30% reduction in response times.
- Designed and implemented front-end components with Angular/React, HTML5, CSS3, and JavaScript/TypeScript, enhancing user experience and decreasing page load times.
- Optimized database performance through schema redesigns, indexing, and writing efficient SQL/NoSQL queries, which led to noticeable reductions in query latency.
- Automated AWS infrastructure provisioning using Terraform, creating reusable modules that reduced environment setup time by 40%.
- Implemented unit and integration tests using JUnit and Mockito, and automated end-to-end UI testing with Selenium/Cypress to ensure quality and reliability across frontend and backend components.
- Implemented authentication and authorization using Spring Security and JWT, securing APIs and protecting sensitive business data.
- Worked with cross-functional Agile teams to refine requirements, deliver features in sprints, and ensure production stability.
- Provided technical support by resolving production issues, implementing bug fixes, and performing performance tuning to ensure system reliability and long-term stability.
- Applied design patterns (Factory, Builder, Singleton) across core modules, improving maintainability and scalability of microservices.
- Conducted SQL tuning and query optimization, improving backend response times by 30% and reducing database CPU usage.

Java Developer

Aug 2019 - Nov 2021

Hexaware Technologies | India

- Developed scalable Java applications, integrated RESTful APIs, and optimized UI components with Angular and JSP to improve user experience and system performance.
- Refactored legacy monolithic applications into microservices using Spring Boot, deploying them on AWS and Azure to improve flexibility and scalability.
- Worked closely with cross-functional teams, including product owners and designers, to ensure seamless collaboration and timely delivery throughout SDLC.
- Led efforts to optimize application performance, identify bugs, and troubleshoot issues to ensure smooth user experiences.
- Streamlined build and deployment processes using Maven and Jenkins, reducing release cycle time by 30% and improving delivery efficiency.
- Contributed to cloud migration projects, helping clients move legacy systems to cloud platforms like Azure, cutting down costs and boosting operational efficiency.
- Applied CQRS and Saga patterns in Spring Boot microservices to improve transaction reliability and reduce downtime during deployments.
- Performed heap and thread dump analysis to resolve memory leaks and deadlocks, stabilizing production systems.
- Reduced MTTR from hours to under 30 minutes by implementing proactive debugging and optimization practices.
- Migrated critical workloads to AWS (EC2, RDS, S3), lowering infrastructure costs by 20% while improving deployment frequency and reliability.

EDUCATION

Master's in Information Technology

May 2025

Webster University, USA

CERTIFICATIONS

- **AWS Certified Solutions Architect**
- **Oracle Cloud Infrastructure 2025 Certified Generative AI Professional**
