

SKILLS

programming language	Java, .NET Core, JavaScript, TypeScript, Python
Tools & Libraries	Spring Boot, Spring Framework, Hibernate, PostGIS, AngularJS, ReactJS, NodeJS, ExpressJS, Selenium, JUnit, Mockito
Cloud Technologies & DB	Docker, Kubernetes, AWS, MySQL, PostgreSQL, MongoDB, Kafka, Redis, ElasticSearch
Relevant Courses	Data Structures & Algorithms, Operating Systems, Computer Networks, Database Systems, Distributed Systems, Big Data Analytics

WORK EXPERIENCE

Software Development Engineer Envision Info Solutions Inc.	May 2024 — Present San Jose, US
---	------------------------------------

- Developed a high-throughput **event-driven architecture** using **Spring Boot, Kafka, and Redis**, enabling real-time processing of **over 1 million notifications per day** with a **99.99% delivery success rate**.
- Designed and optimized multi-database storage architecture** using **Oracle** for transactional consistency, **MySQL** for high-speed lookups, and **MongoDB** for flexible schema storage of notification metadata **resulting in 35% improvement in query performance** and **50% reduction in schema management overhead for dynamic event payloads**.
- Designed scalable REST APIs** for dynamic notification templates and audit trails using **Java Spring Boot**, improving developer productivity and **reducing integration time by 30% for downstream services**.
- Deployed services to AWS ECS Fargate with Terraform**, achieving **95% infrastructure-as-code coverage** and **reducing manual provisioning errors by 100%**.
- Integrated CI/CD pipelines** using **GitHub Actions** and **AWS CodePipeline**, **automating unit, integration, and smoke tests** for every pull request and **reducing release cycle time by 70%**.
- Contributed to system observability** by integrating **Amazon CloudWatch** and **Datadog APM**, allowing real-time monitoring and early anomaly detection, which **reduced average MTTR (Mean Time to Resolve) by 40%**.
- Integrated PostGIS with an event-driven notification system** to perform real-time geospatial filtering and proximity-based alerting, enabling location-specific notifications and **reducing false-positive alerts by 35%** using spatial indexing and trigger-based event handling.
- Integrated Amazon Redshift** for large-scale analytical reporting on notification delivery metrics, enabling near real-time insights across millions of events and **reducing dashboard query latency by 60%** through optimized schema design and distribution/sort key tuning.
- Designed and validated over 30+ RESTful API endpoints** using **Postman**, implementing test suites for automated contract verification and regression testing, which **reduced API-related bugs in production by 30%**.

Software Development Engineer BeamX TechLabs Pvt Limited	June 2020 - July 2022 Hyderabad, IN
---	--

- Led the architecture and development of a secure, low-latency contactless payment web application**, implementing **Spring Boot, PostgreSQL, and JWT-based authentication** to process high-volume transactions with PCI-compliant data handling and seamless third-party integrations.
- Developed secure payment-related APIs and implemented a CSS3-based responsive UI**, ensuring cross-browser compatibility and accessibility and optimized front-end rendering to **reduce transaction form load time by 25%**, enhancing user experience in high-traffic environments.
- Implemented clean, standards-compliant HTML5 structures** for the payment interface, optimizing for mobile-first responsiveness and seamless integration with API-driven components, **leading to a 20% increase in successful user checkouts**.
- Utilized JavaScript to create interactive payment workflows**, including real-time form validation, API integration, and error handling, ensuring a seamless checkout experience and **reducing user drop-off rates by 25%**.
- Engineered a secure and modular front-end using Angular**, implementing dynamic form handling, API integration, and routing; ensured smooth user interactions across devices, **reducing transaction drop-offs by 25%**.
- Developed complex SQL procedures and indexing strategies on PostgreSQL** to manage transaction logs and audit trails, ensuring ACID compliance, data integrity, and quick retrieval of payment histories
- Orchestrated scalable API-driven backend services using Kubernetes on AWS**, integrated with Jenkins for continuous delivery and monitoring; ensured high availability and fault tolerance for payment processing under peak loads.
- Implemented automated unit and integration testing frameworks** using **JUnit, Postman, and Selenium**, validating API endpoints and payment workflows across services, which improved release confidence and **reduced regression failures by 50%**.

EDUCATION

Master of Science in Computer and Information Systems [STEM], Central Michigan University	August 2022 - May 2024
Bachelor of Technology in Information Technology, IIIT Bhubaneshwar	August 2016 - May 2020
