

NITHIN REDDY GEEREDDY

Miramar, Florida | (913) 407-3156 | nxg55160@ucmo.edu | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Full Stack Developer with 5 Years of experience in designing and delivering scalable web applications using Java, Spring Boot, React.js, and SQL. Proficient in front-end development with HTML, CSS, JavaScript, and React.js, and skilled in building secure, efficient backend services with Java, Python, and MySQL. Experienced in cloud-native development on Azure and AWS, CI/CD pipelines, and API integrations. Recently worked on AI-powered applications leveraging Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) to enable real-time, no-code web experiences. Strong focus on building reliable, user-centric solutions that bridge modern software engineering with emerging AI technologies.

PROFESSIONAL EXPERIENCE

Full Stack Developer | Katpro Technologies Inc, Tampa, FL

August 2023 – Present

- Developed the Coca-Cola Florida Scholars Portal using Java **Spring Boot**, **Spring MVC**, **React.js**, and **SQL Server**, supporting full scholar registration and login workflows.
- Integrated Azure AD (**OAuth 2.0**) for secure authentication and role-based access via Microsoft Identity, with backend support using **Graph API** for **SharePoint** list interactions.
- Automated email notifications through **Power Automate**, triggered by backend and SharePoint list updates.
- Implemented Web Application Firewall (**WAF**) rules, IP filtering, and user activity logging for enhanced security and audit trails.
- Streamlined UI performance through **lazy loading** of components and optimized bundle sizes, and deployed applications via **Azure DevOps CI/CD** pipelines integrated with Git for automated builds and seamless delivery.
- Actively participated in **Agile** meetings including sprint planning, backlog grooming, daily stand-ups, sprint reviews, and retrospectives to ensure efficient progress tracking, timely delivery of features, and alignment with evolving project requirements.
- Collaborated with cloud architects to integrate **Azure Functions** and Azure Monitor for backend services monitoring and alerting.
- Built and maintained robust **REST APIs** and modular **microservices** using Spring Boot to securely handle user data processing workflows. Integrated Azure Key Vault for centralized management of secrets, credentials, and sensitive configuration parameters, ensuring enhanced application security, compliance, and streamlined deployment across environments.
- Designed and implemented robust RESTful APIs, defined structured **XML/JSON** schemas for data exchange, and developed comprehensive **JUnit** test cases to validate service functionality.
- Applied **AJAX** techniques, **JavaScript**, and **JQuery** Mobile to deliver responsive and user-friendly interfaces across devices.
- Enhanced system modularity and resiliency by incorporating **Kafka**-based message queues and retry policies.
- Designed reusable React components to manage scholar records and dashboard interactions with RESTful APIs, improving frontend development speed by 40%. Integrated Spring Security with **JWT** tokens to enforce role-based access control across all endpoints.
- Orchestrated microservice deployments using **Kubernetes** to ensure scalability and high availability in production environments.
- Implemented inter-service communication using Feign clients and RESTTemplate within Spring Boot microservices architecture to ensure consistent API orchestration and service resilience.

Advanced Application Engineer Associate | Accenture Pvt Ltd, Hyderabad, India

May 2022 – Aug 2023

- Designed and implemented enterprise-level **UI components** using **Angular.js**, **Typescript** for internal financial dashboards and reporting tools integrated with Robot Framework developed modular backend services using **Java Spring Boot** and **REST APIs**, and wrote **complex SQL** queries for financial data processing, reducing inconsistency rates by 25%.
- Built and deployed **AWS Lambda** functions to trigger real-time events from DynamoDB, enabling low-latency workflows, and utilized AWS IAM policies for secure function-level access control.
- Modernized monolithic systems by breaking them into **Dockerized microservices** with optimized communication via **Spring Cloud Gateway**, deployed and scaled on **Kubernetes** clusters, ensuring robust service resilience and high availability.
- Automated DevOps workflows to package file versions and build **Docker images** using Bash scripts, integrated with Jenkins pipelines, and collaborated with stakeholders to ensure continuous delivery compliance.
- Wrote comprehensive unit and integration tests using **JUnit** and **Mockito**, improving overall test coverage and reducing defect rates during QA handoffs. Applied Spring **AOP** for implementing cross-cutting concerns such as logging, exception handling, and authentication across multiple microservices, and developed client-side validations using React with real-time state updates.
- Managed end-to-end deployment cycles for containerized financial services using Kubernetes, including writing Helm charts, setting up namespace isolation, configuring resource quotas, and enabling horizontal pod auto-scaling to ensure high availability, optimized performance, and cost-effective infrastructure utilization across environments. Facilitated secure and efficient service-to-service communication using **Spring Cloud Eureka** and Gateway for **load-balanced discovery**, ensuring smooth orchestration across distributed modules.

Full Stack Developer | Virtusa Consulting Services Pvt Ltd, Hyderabad, India

Jan 2020 – May 2022

- Built scalable and secure backend REST APIs using Node.js, Express, and MongoDB to manage course creation, student enrollment, progress tracking, and instructor workflows, ensuring efficient data flow and seamless integration with frontend components.
- Developed responsive frontend modules in React.js, JavaScript, Redux and Bootstrap to manage schedules, assignments, and student dashboards. Integrated **WebSocket's** for real-time updates on assignments and announcements.
- Optimized MongoDB queries and integrated caching strategies to improve dashboard performance during peak usage, achieving 30% faster data retrieval in a cloud-hosted environment on AWS.
- Configured AWS infrastructure using Terraform, enabling rapid provisioning of dev and staging environments supported the deployment of **15+ microservices** seamlessly.
- Led the refactoring of large React components into functional hooks-based components, improving maintainability.
- Designed RESTful interfaces and validation pipelines using **Java** backend APIs for seamless integration with front-end modules.
- microservice chaining using asynchronous HTTP calls with Axios and Spring Boot services to manage transaction workflows across service boundaries.
- Applied TDD principles using Jest and Mocha to write unit tests for Node.js services and frontend components, ensuring reliability and reducing regression bugs. Practiced BDD methodologies using Cucumber.js to define user scenarios for enrollment and progress tracking workflows, improving collaboration between developers and QA.

PROJECTS

Smart OCR

- Automated 500+ receipt data extractions using **Tesseract OCR**, reducing manual effort by 80%.
- Developed a full-stack app with React.js, Spring Boot, and Express.js, improving response time by 30%.
- Optimized MySQL storage, ensuring **100% accuracy**, 40% faster retrieval, and a 95% accurate expense dashboard.

Hybrid Face Detection and Comparison System

- Engineered a face detection system using Python, TensorFlow, and Keras, improving accuracy by 32%.
- Achieved 92% model accuracy with optimized training/testing split, reducing computational overhead.
- Published research in Journal of Emerging Technologies and **Innovative Research (JETIR)**, **JETIR2206647**.

AI-Powered No-Code Website Builder with Real-Time Preview

- Built a GenAI-driven web app to generate React.js websites from natural language using LLMs and the OpenAI API.
- Integrated WebContainers for real-time code execution and instant preview in the browser.
- Designed a RAG pipeline to handle FAQ queries using natural language and fetch relevant answers.
- Implemented a serverless backend using AWS Lambda, API Gateway, and DynamoDB for scalability.
- Created a user-friendly, no-code interface that enables non-technical users to build full-stack apps.

TECHNICAL SKILLS

- **Languages:** Java, Python, C, C++, JavaScript, TypeScript, SQL, JQuery, AJAX
- **Frameworks & Technologies:** Spring Boot, Spring MVC, Junit, Node.js, React.js, Express.js, OWASP
- **Databases:** MySQL, MongoDB, PostgreSQL, Oracle, DynamoDB, Hive, Cassandra, Hadoop, Azure
- **Cloud & DevOps:** AWS, Azure, Docker, CI/CD Pipelines (Jenkins, Kubernetes), Serverless (Lambda)
- **Data Science & AI:** TensorFlow, PyTorch, Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn
- **Tools:** Eclipse, IntelliJ, VS Code, Power BI, JIRA, GitHub, Burp Suite, Postman, Swagger
- **Other skills:** Agile Methodology, SDLC, UML, Maven, SOAP, RESTful, GraphQL DOM, Servlets, JSP, Multi-threading, JDBC

EDUCATION AND ACHIEVEMENTS

Masters in Computer Systems Analysis - University of Central Missouri, Lee's Summit, MO

August 2023 – December 2024

Bachelors in information technology – CMR Institute of Technology, India.

Grand Finalist, Virtusa Neural Hack Season-5 (Top 10% globally, **National Coding Competition**)
