OBJECTIVE

With 4+ years of experience as a Java Full Stack Developer, my objective is to continue advancing my career by taking on challenging projects that require expertise in both front-end and back-end development. I am eager to utilize my comprehensive understanding of Java frameworks, databases, and modern web technologies to architect robust and scalable solutions.

PROFESSIONAL SUMMARY

- Over around **4+** years of experience in analysis, design, development, and deployment of Web-based and Enterprise Applications using **Java/J2EE** technologies.
- Experienced in working with **Redux** architecture using complex Object-oriented concepts in improving the performance of the websites. Adding permissions to **AWS SQS** to interact with the Queue and involved in writing custom policies.
- Hands on experience with design patterns like **MVC, Business Object, Value Object, Singleton, Factory Pattern, Business Delegate, Session Facade, Service locator, Front Controller** and **DAO pattern**.
- Created and triggered automated builds and Continuous Deployments (**CD**) using **Jenkins/looper** and **OneOps** cloud.
- Good exposure on using **IDE'S** like **Eclipse, Sublime Text, IntelliJ** and **Net Beans**.
- Well experienced in using **JUnit** for performing unit-testing framework.
- Strong programming skills in **Java, J2EE, J2SE** with extensive ability to develop scalable applications.
- Worked with **React.js Virtual DOM** and **React** views, rendering using components.
- Configured **Log4j** for adding the debugging information in the code base.
- Strong experience in developing Single Page Application (**SPA**), using **MEAN (Mongo, Express, Angular and Node)** stack.
- Strong knowledge and hands-on experience of deploying applications using **Kubernetes**, cloud native application development, pivotal cloud foundry, **JavaScript, Kendo UI, Java/J2EE** technologies & **RDBMS**. Modelled **JSON** data from database and coded request handlers for parsing and sending relevant data to client (browser) side.
- Having good experience in writing Joins, clauses, store procedures, triggers, cursors using **PL/SQL** in **JDBC, ODBC** and **WebLogic** server. Implemented **PL/SQL** scripts, triggers, store procedures and views.
- Experience in messaging queue services like **IBM MQ, Rabbit MQ, Active MQ** and **Apache Kafka**.
- Good understanding **Core Java SE 8** concepts like Streams API, Time API, Functional Interfaces, Multithreading, Transaction Management, Exception Handling, **Lambda functions**, Generics and Collection API.
- Strongly associated with usage of **Selenium, Jenkins, Junit** and **Curl** for **Unit** and **System Testing**.
- Implemented persistence layer integration with **DBs** using **iBatis, JPA/Entities/Hibernate/JDBC API**.
- Extensive experience in testing on multiple operating systems including **Linux, Unix, Sun Solaris**, and **Windows**.
- Extensive knowledge in database transactions management for database related changes by integrating **JDBC, Hibernate** with **Spring Boot**. Developed **ANT scripts** to build and deploy the application in the **JBOSS** Application Server.
- Developed interactive web application using **Node Js** a pure java script application frame work.
- Used Apache **SVN** and **Git** for repository management and **Ant** for build management.
- Used **AJAX** frameworks like **JQuery, JSON** to develop rich GUIs and involved in performance tuning the website.
- Proficient in using **Spring** (transaction support modules and **JPA**), **Spring JDBC** (for transferring data to database).
- Experience with running **HTTP, DNS** and **TLS** infrastructure.
- Managed the platform over the years through **Agile**, Scrum and **Waterfall** practices.
- Experienced in working across multiple operating systems, including **Windows, Linux**, and **MVS**.
- Used **JIRA** for defect management and to keep track of bugs and issues.
- Good exposure to service-oriented architecture (**SOA**) such as **Web Services** and hands-on experience in developing and registering web services using **JAX-RPC, JAX-WS, SAAJ, JAX-RS, SOAP, RESTful**, and **WSDL**.

TECHNICAL SKILLS

Programming Languages	Java, JavaScript, TypeScript, SQL, Go, Python
Frontend Frameworks	Angular, React, Vue.js, Bootstrap
Backend Frameworks	Spring Boot, Hibernate, JEE, Jersey
Relational Databases	Oracle, MySQL, PostgreSQL
NoSQL	MongoDB, Cassandra, DynamoDB
Version Control	Git, GitHub, GitLab, Bitbucket
CI/CD Tools	Jenkins, GitLab CI/CD, Azure DevOps, Bamboo
Cloud Platforms	AWS (Elastic Beanstalk, EC2, Lambda, S3), Azure (App Services, Functions), GCP
Containerization and Orchestration	Docker, Kubernetes
Monitoring and Logging	ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana
Testing Tools	JUnit, Mockito, Selenium, Postman
Others	Maven, Gradle for build automation, Jira, Confluence for project management

EDUCATION

Southern Arkansas University, Arkansas, USA

- Masters / Computer and Information Science

EMPLOYMENT HISTORY

Java Full Stack Developer - Aug 2024 to Current Santander Consumer USA - Dallas, Texas, USA

Santander Consumer USA Inc. provides automotive financing services. I design and implement RESTful services using Java, J2EE, Spring Boot, Spring MVC, JAX-RS. Use JSP, Servlets, JSTL, Custom Tag Libraries for dynamic content generation. Design relational database schemas and optimize queries using Oracle, MySQL, PostgreSQL, SQL.

Responsibilities and Achievements:

- Deployed static websites and several supporting APIs (Node.js) following a server less architecture in **AWS** (API Gateway, **AWS Lambda** & Lambda @Edge, Cloud Front, Dynamo DB, **S3**, and more).
- Used Dependency Injection feature of **Spring** framework and involved in writing the database integration code using **Hibernate** and used the **Spring AOP** features to handle the exceptions.
- Designed **REST** based **Microservices** using **Spring Boot**.
- Designing & development of entire validation service to perform data validations on the test cases built on the extracted, transformed, loaded data & working on Linux platform.
- Collaborating on the design and implementation of end-to-end solutions that leverage both **Cassandra** and **Java**.
- Created **REST** clients to consume data from other partner applications and involved in creating POC's using **MEAN** stack and enhancing existing **REST API's** developed using **Node-JS**, **Express-JS** and **Mongo-db**
- Implemented a Continuous Delivery pipeline with **Docker**, **Jenkins** and **GitHub** and **Amazon Machine Images** (AMIs), whenever a new **GitHub** branch gets started. **Jenkins**, our Continuous Integration server, automatically attempts to build a new **Docker** container from it, The **Docker** container leverages **Linux** containers and has the **AMI baked in**.
- Used JIRA and supporting **CI/CD** tools, and **JIRA** for bug Tracking and Project Management.
- Used **Git** as source code version control. Used **Maven** to manage dependencies.
- Integrated **SOAP** based web services into the web application to enable payments and claims through mo-bile apps.
- Participated in coding **Spring AOP** components for the Logging, Exception handling and Transactional Model to handle many requests. Extensively used **JUnit** and **JMockit** for writing unit test cases.
- Involved in the development of presentation layer and **GUI framework** using **Angular JS** and **HTML**.
- WebServices used **Java 5**, **JSP**, **Servlets**, **EJB 3.0**, and deployed on **WebLogic** and **WebSphere**.
- Worked on fixing bugs and used JIRA to update them
- Implemented asynchronous messaging services using **JMS**.

- Extensively Used **Jenkins** as Continuous Integration tool to deploy **Spring Boot Microservices** to Pivotal Cloud Foundry (**PCF**) using build pack. Implemented **Kubernetes** Stateful Sets to manage stateful applications in the marketing environment, ensuring data integrity and high availability.
- Streamlined the server Implementation by moving to **JSON** and **MongoDB** as the backend data model.
- Utilized **AWS** Services platform to upload data into **AWS S3** buckets and creating **EC2** instances.
- Skilled in creating and customizing **API** assembly flows, policies, and security configurations.
- Implemented web crawling using **Python** to extract store demographics, items, brands, and categories.
- Implemented the function to send and receive **AMQP** messages on **RabbitMQ** synchronously and asynchronously, and send **JMS** message to **Apache Active MQ** on the edge device.

Environment: Angular, AOP, AWS, AWS Lambda, Cassandra, CI/CD, Docker, EC2, EJB, Git, GitHub, Hibernate, HTML, Java, Jenkins, JMS, JSON, JSP, JUnit, Kubernetes, Microservices, MongoDB, Node.js, PCF, S3, Servlets, SOA, SOAP, Spring, Spring Boot

Java Full Stack Developer - Jan 2024 to July 2024

Texas Health Resources - Fort Worth, Texas, USA

Texas Health Resources is one of the largest faith-based, nonprofit health systems in the United States, serving communities across North Texas. Developed and maintained scalable healthcare applications using Java, Spring Boot, and Hibernate. Implemented RESTful APIs for seamless data exchange between systems. Utilized SQL and Azure services for secure data management. Ensured HIPAA compliance, system reliability, and high availability across hospital networks.

Responsibilities and Achievements:

- Worked with marketing stakeholders to define requirements and provide technical guidance for designing scalable and fault-tolerant systems using **Kubernetes** and **Docker**.
- Developed mapping spreadsheets for (**ETL**) team with source to target data mapping with data modelling naming standards.
- Extensively used **Java 8** features such as lambda expressions, Parallel operations on collections, multithreading and for effective sorting mechanisms. Developed a controller Servlet that dispatches request to appropriate **Action Classes**.
- Implemented **Kafka** high level consumers to get data from **Kafka** partitions and move into **HDFS files**.
- Involved in various phases of **SDLC** as requirement gathering, modelling, analysis, architecture design and development and the project was developed using **Agile Methodologies**.
- The views are programmed using **JSP** pages with the **struts** tag library; Model is the combination of **EJB's** and **Java** classes and web implementation controllers and **Servlets**.
- Implemented **RESTful** web services which produces both **XML** and **JSON** files to perform tasks, **RESTful** web service using **Jersey** for **JAX-RS** implementation, which leveraged both web & mobile applications.
- Hands-on experience with key **AWS** services such as **EC2, S3, RDS, Lambda**, and **CloudWatch**.
- Proficient in deploying Java-based microservices and full-stack applications on **AWS**.
- Experience in managing and automating cloud infrastructure using **AWS CLI, CloudFormation**, or Terraform
- Worked on Ion **API** for working **ION** data, such as creating and manipulation Ion values, performing encoding and decoding, converting Ion data to other formats.
- Performed UI testing and front-end testing using **Selenium**. Used **Firebug** to do web-based application testing with **Selenium** for the commands and locator application.
- To meet scale and availability requirements, we selected **Apache Cassandra** for **Cassandra's master** less architecture, ability to scale horizontally easily and quickly to meet their growing data store needs.
- Developed the view-controller components using **Servlets /JSPs, JavaScript (jQuery), CSS, HTML** and **DHTML**

Environment: Java, JFC Swing, J2EE, Java Script, JSP, JDBC, AJAX, XML, JUnit, Servlets, Spring, Hibernate, Tomcat Web Server, AWS, Oracle, Web logic Server, Xpath, UNIX, Windows.

Java Full Stack Developer - Oct 2022 to Jul 2023

Cashfree Payments - Bangalore, India

Cashfree Payments is a payments and banking technology company that enables businesses in India to collect payments online and make payouts. Implemented the CI/CD pipelines for efficient development workflows using tools integrated with the above stack.

Responsibilities and Achievements:

- Used Streams and Lambda expressions available as part of **Java 8** to store and process the data.
- Implemented **AJAX** calls from backend without page refresh using **jQuery, AJAX, J2SE, Spring MVC** and **Hibernate**.
- Implemented **Microservices** into existing system architecture. Developed **Microservices** business components and **RESTful** service endpoints using **Spring Boot**. Responsible for installing JBoss, administering and support of staging, QA and Production environment and performed failover test. Deployed application in **JBoss** on **UNIX**.
- Utilized the **oracledb** module in **node js** to connect, make database CRUD operations, execute oracle data-base package functions and stored procedures. Involved in fixing the bugs posted in **JIRA** tool.
- Worked with **Git** which is used as a version control tool in the project. Developed a **Micro Service** Oriented application with **React JS** in the front end and **Spring Boot** services.
- Involved in **Scrum** meetings, Sprint/retrospective planning and estimation of the tasks for the user stories and refine the tasks for next sprint. Involved in setting up Maven configuration and helping Continuous Integration (**CI/CD**) Issues.
- Coding using core java, **Servlets** and **JSP** using **Eclipse IDE**.
- Implemented light weight **WADL** (Web application description Language) for better understanding of Rest based web services and its configuration. Implemented **Spring MVC** framework which includes writing Controller classes for handling requests, processing form submissions and also performed validations.
- Used **Angular**.JS framework to bind **HTML** (views) to **Java** Script objects (models). Migrated **Jsp's** from Struts1 to **Struts2** eliminating custom tags. Developed Service Timeouts for **NoSQL, MongoDB, Db2** and **Sybase**.
- Used **Amazon CloudWatch** to monitor **AWS** services and **Amazon CloudWatch** logs to monitor application.
- Used Streams and **Lambda Expressions** available as part of **Java 8** to store and process the data.

Environment: AJAX, Angular, AWS, CI/CD, core java, Eclipse, Git, Hibernate, HTML, Java, Java 8, jQuery, JSP, Lambda Expressions, Microservices, MongoDB, MVC, NoSQL, RESTful, Servlets, Spring, Spring Boot, Spring MVC, SQL

Java Developer - Jan 2021 to Sep 2022

BT Group - Bangalore, India

BT Group plc is a British multinational telecommunications holding company. I worked in Agile/Scrum environments, participate in daily standups and sprint planning. Collaborated with UI/UX teams, DevOps, QA, and Product Owners to deliver business requirements.

Responsibilities and Achievements:

- Effectively implemented advertiser sponsor service, such as data storage, ORM service interface using **Hibernate 5.3.7**, **MySQL 8.0**, **Spring Cloud** and **Spring Boot 2.4**.
- Maintained 24/7 high volume availability demands using open source tools such as Linux, Apache, PHP, and **MySQL**.
- Utilized **React** for its efficient data flow architecture to create a lightweight and render efficient web app that searched projects via the **GitHub** API through keywords. Used **Eclipse IDE** for application Development. SOAP has been used as a protocol to Communicate in the form of **XML** messages.
- Use **Log4j** or other logging frameworks for application logging and trouble shooting.
- Java Message Service (**JMS**) is used for exchanging the information and messaging services.
- Developed charts (Bar, Pie, Line, etc.), cross-tabs, and conditional styling in reports by using **JasperReports**.
- Deployed our application on Pivotal Cloud Foundry (PCF) which is used to reduce the development overhead by providing a ready to use platform. Created **HTML** navigation menu that is role based wherein menu items changes dynamically based on the values derived from the database in the form of **JSON**.
- Services are migrating to Camel and deploying to **Kubernetes** cloud environment using **CI/CD pipe line**.
- Implement persistence layer using **Spring JDBC** template to connect and store data in a **SQL** database.
- Build & Deployment in WebSphere Application Server.
- Involved in design, Development and implementation of Product Lifecycle admin site based on -'MVC' architecture and Front control design pattern using **Spring MVC** Framework for Presentation tier and server-side **J2EE** technologies.

Environment: CI/CD, Eclipse, Git, GitHub, Hibernate, HTML, J2EE, Java, JDBC, JMS, JSON, Kubernetes, Log4j, MVC, MySQL, PCF, React, SOA, SOAP, Spring, Spring Boot, Spring Cloud, Spring MVC, SQL, XML
