EDUCATION

University of California, Los Angeles <i>MS in Business Analytics</i>	December 2024
Grenoble Ecole de Management <i>Bachelor in Business Administration (Finance and Economics)</i>	July 2021

TECHNICAL SKILLS

Programming Languages: SQL, Python, R

Tools and Technologies: Snowflake, Tableau, Power BI, Databricks, dbt, AWS, Spark, TensorFlow, Microsoft Excel

Career Field Skills: Data Storytelling, Machine Learning, Predictive Modelling, Data Engineering, Statistical Analysis

WORK EXPERIENCE

THE WALT DISNEY COMPANY	September 2024-December 2024
--------------------------------	-------------------------------------

Data Scientist Intern (Capstone)

- Designed a machine learning algorithm to predict high-performing payment processors, boosting success rates by 4.8% while simultaneously cutting costs by 0.9% in prototype algorithm, making real-time decisions.

FOX ENTERTAINMENT

Data Scientist Intern

June 2024-September 2024

- Performed data manipulation and statistical analysis on streaming data stored in AWS S3 using Spark, Python and Tableau to develop a dashboard on viewer behavior, presenting 3 data-driven insights to the Vice President.
- Engineered end-to-end data pipeline of 1 TB+ of data for Marketing Mix Modeling, leveraging Databricks Delta Lake and Spark for ETL processing and feature engineering. Automated data transformations using dbt.

UCLA ZIMAN CENTER FOR REAL ESTATE

Data Science Researcher

January 2024-April 2024

- Spearheaded Big Data Analysis Project, performing extract, transform and load (ETL) on unstructured datasets (4TB) using PySpark & SQL to build relational databases, used to develop predictive model on Real Estate price.

FINQUEST

Process Lead – Data Science and Analytics Team

January 2023-June 2023

- Built end-to-end Customer Lifetime Value model using MySQL and Python and GitHub version control for model development. Designed temporal features for cohort-based customer behavior analysis and deployed automated ETL pipelines to streamline data processing, enabling strategies to improve retention rates by 8%.

FINQUEST

Data Quality Associate

June 2022-January 2023

- Developed a predictive model for M&A target identification, analyzing 2 TB of private company data to predict ideal acquisition candidates, reducing initial target screening time by 40% and strengthening pitching process.
- Deployed Machine Learning algorithms using scikit-learn in AWS SageMaker to identify anomalies in large datasets to perform quality control, improving data quality score of projects by 7%.

FINQUEST

Data Analyst

August 2021-June 2022

- Leveraged quantitative analysis tools like clustering techniques and segmentation on proprietary AI-driven database of 200M companies to identify targets for Venture Capital clients, leading to 30 successful acquisitions.

PROJECTS

Image Classification using Deep Learning

- Implemented transfer learning and data pipelines using AWS SageMaker, AWS S3 and TensorFlow. Classified images from the COCO dataset using machine learning techniques, achieving an RMSE of 0.15.

End to end data engineering and analytics project of New York Collision data

- Leveraged AWS and Snowflake Data Warehouse for ETL, used Python for Data Cleaning, SQL for data modeling, dimension tables and fact tables. Built Tableau dashboard to present statistics on accident-prone zones.
