

NITHISHA PAMARTHY

pamarthynithisha@gmail.com | 513-879-3703 | <https://www.linkedin.com/in/nithisha-pamarchy/>

Skills

Programming Languages:	Python, PySpark, SQL, C, C++
Database Technologies:	MSSQL, Oracle, SSRS, SSAS
Data Processing & Analytics Technologies:	Hadoop, HDFS, Hive, Power BI, Excel, Apache Airflow,
Cloud Technologies:	AWS, Azure, Azure Synapse Analytics, Azure Data Factory, Azure Databricks
Soft Skills:	Strong Analytical and Communication skills, Great problem-solving skills

Experience

Data Engineer

July 2023 – Current

Client - Capital One

- Managed financial transaction data of the client using **Azure Synapse Analytics** and **Azure Databricks**, enabling seamless ingestion, transformation, and integration through **PySpark** and **SQL** scripts of over 5 TB+ of data.
- Designed and implemented **ETL** workflows in Azure Synapse, integrating diverse sources like SQL Server, JSON files, and APIs into **Azure Data Lake**, improving data availability for analytics by 40%.
- Optimized large-scale data transformations in Azure Databricks using PySpark, converting raw transactional data into Parquet format with a star schema architecture.
- Utilized **Git** for version control, maintaining PySpark and SQL scripts to ensure collaborative development, seamless rollbacks, and robust change tracking across multiple team members.

Technical Student Assistant – University of Cincinnati, Ohio

July 2022 – April 2023

- Designed and implemented a comprehensive data solution for managing student housing data using **Power BI**, **Excel**, and **SQL**, leveraging data modeling, parameterized functions, and advanced features like unpivoting and pivoting columns.
- Developed dynamic and interactive **dashboards** and **reports** in Power BI, utilizing **DAX** to create measures and KPIs for tracking student housing occupancy, average stay duration, etc. improving real-time decision-making for housing management.
- Streamlined the process of data profiling, filtering, and grouping using **Power Query** in Excel and Power BI.
- Applied **query folding** techniques and optimized Power BI queries to improve report loading times by 40%, providing timely insights for student housing management.
- Built complex **calculated columns** and **measures** using DAX, enabling on-the-fly calculations for various housing metrics and improving data insights for decision-makers by 30%.

Senior Analyst – Capgemini Technology Services

Aug 2019 – Nov 2021

Client - Bayer

- Utilized **CyberArk Identity and Access Management (IAM)** roles to manage access for database users across 6 critical systems, ensuring secure authorization.
- Followed **Agile** methodology for client deliverables, coordinated with 5 cross-functional teams to ensure that over 95% of Incidents were effectively resolved within the agreed **Service Level Agreement (SLA)** timeframe on **Service Now** platform.
- Designed **ETL** pipelines using **SSIS** to automate the extraction, transformation, and loading of data from multiple data sources.
- Developed and maintained complex **T-SQL** queries for views, functions, and stored procedures to support critical business processes, resulting in a 30% improvement in query performance.
- Designed and implemented **data warehouses** in **MSSQL**, following best practices in data modeling and star schema design, leading to a 25% reduction in data retrieval time for business intelligence reports.
- Implemented data consolidation processes, integrating data from diverse file formats (CSV, TEXT, JSON, XML) into a centralized **data warehouse**.

Client – Daimler Truck AG

- Architected and implemented a data warehouse solution, harmonizing data from ERP systems using **Hadoop (HDFS, Hive, Sqoop)**, **Apache Airflow**, **Python** and **PySpark**, improving data accessibility.
- Developed data ingestion pipelines using **Apache Sqoop** and **Kafka** to import 5TB+ of structured and real-time data into **HDFS**.
- Transformed and harmonized data using Hive and PySpark, creating a unified schema across 7+ sources
- Developed ETL pipelines to process and load harmonized data into Hive tables, improving query performance by 40% for analytics workloads.
- Orchestrated end-to-end data workflows using Apache Airflow, managing multiple task dependencies to ensure seamless execution of data ingestion, transformation, and loading processes.

Education

Master of Science, Information Technology | University of Cincinnati | Cincinnati, OH (April 2023)

GPA: 3.96/4

Bachelor of Technology, Electronics and Communication Engineering | Vardhaman College | India (April 2019)

GPA: 3/4
