

SUMMARY

Detail-oriented data analyst with 5+ years of experience transforming data into wisdom and delivering tactical solutions using the SDLC Agile methodology. Expertise in data wrangling, mining, transformation, statistical analysis, and visualization using Python, R, SQL, MongoDB, Excel, Tableau, and Power BI. Skilled in writing optimized SQL queries and developing interactive dashboards and reports to improve data accessibility and reporting efficiency. Proficient in cloud solutions, including AWS, Azure, GCP, Snowflake, and Databricks, to enhance data workflows and scalability.

EDUCATION

George Mason University, VA

May 2024

Master of Science | Data Analytics Engineering

Coursework: Data Management & Mining, Statistical Modeling, Predictive Analytics, Optimization, Data Visualization, Big Data Analytics, NLP, Generative AI, Large Language Models, Prompt Engineering, Metadata.

SKILLS

SDLC Methodologies	Agile Scrum, Waterfall
Languages	R, Python, SQL
Reporting & BI Tools	Tableau (Calculated Fields, Dual-Axis Graphs, Sets, Dashboards, Stories), Power BI (DAX Functions, Power Query, Bookmarks), Excel (Pivot Tables, Macros, Power Query, VLOOKUP, XLOOKUP, Analytic Solver).
Databases	MongoDB, MySQL, PostgreSQL
IDE’s	PyCharm, Jupyter Notebook, Visual Studio Code, RStudio
Big Data Ecosystem	Hadoop, MapReduce, Apache Spark (Pyspark, Spark MLlib)
Machine Learning & Statistical Methods	Linear Regression, Logistic Regression, SVM, Decision Trees, Random Forest, Naive Bayes, KNN, XGBoost, Clustering (K-means, Association Rule Mining-Apriori, FP-Growth), Bayesian Analysis, A/B Testing.
Analytical Libraries & Packages	NumPy, Pandas, Scikit-learn, NLTK, Pyspark, Spark MLlib, Matplotlib, Seaborn, ggplot2, Tidyverse, ggiraph, GGally, dplyr, reshape2.
Cloud Solutions	AWS, Azure, Google Cloud Platform (GCP), Snowflake, Databricks
Other Skills	Problem-Solving, Critical Thinking, Communication, Attention to detail, Collaboration & Teamwork

EXPERIENCE

Data Analyst | The Cigna Group, VA

Nov 2023 - Current

- Collaborated with cross-functional teams and stakeholders in an Agile environment, participating in stand-ups, backlog refinement, and retrospectives to improve healthcare data workflows and support cost-saving initiatives.
- Extracted, cleaned, and analyzed large-scale EHR data using SQL, Python, and Apache Spark, ensuring 95% data accuracy and HIPAA compliance, to support clinical reporting and data-driven decision-making, leading to higher preventive care utilization.
- Designed interactive dashboards and reports using Tableau and Power BI to track healthcare KPIs, patient outcomes, and treatment effectiveness, enabling early identification of high-risk patients and reducing readmission rates by 15%.
- Optimized patient scheduling and resource allocation by writing complex SQL queries to retrieve, aggregate and analyze visit patterns and workflow efficiency, reducing waiting times by 20% and improving patient satisfaction.
- Analyzed claims data to identify fraud patterns and billing discrepancies using SQL and Excel, leading to policy improvements that reduced fraudulent claims by 10% and enhanced financial integrity through data validation and reporting.
- Enhanced pharmacy and claims data processing by assisting in the development of scalable data warehousing solutions on AWS Redshift and Azure, helping to reduce data retrieval time, lower prescription costs, and improve care coordination.

Data Analyst | Deloitte, India

Aug 2021- July 2022

- Architected comprehensive data visualization solutions by gathering and analyzing stakeholder requirements while ensuring scalability, performance, and security, contributing to an increase in client retention.
- Utilized DAX functions in Power BI to create complex calculated columns and measures, enabling real-time reporting and accurate data analysis, which improved insights and increased client satisfaction.
- Designed and implemented complex SQL queries using CTEs, window functions, and cross-database merges to streamline the ETL process into Databricks, ensuring data accuracy and improving analytics efficiency by 30%.
- Assisted in the migration of multiple data sources to Azure Synapse Analytics using Azure Data Factory, ensuring seamless data integration and transformation processes.
- Engaged with cross-functional teams to develop a data governance framework, ensuring compliance with Deloitte’s policies and external regulations, standardizing data usage across departments, and contributing to successful audits with zero compliance issues.
- Automated data extraction and reporting by creating reusable Python scripts, reducing manual effort by 40% and enabling the team to focus on high-impact analysis and client needs.

Data Analyst | Infinite Infolab, India

Jan 2019 - July 2021

- Collected and analyzed 1.5M+ credit card transactions using Pandas, NumPy, PySpark, ggplot2 to identify fraud patterns and unusual spending behavior, reducing financial risk through ad-hoc analysis and anomaly detection.
- Created interactive Tableau dashboards to track customer spending patterns and engagement, helping finance teams identify at-risk customers, implement retention strategies, and minimize churn.
- Automated KPI reporting and financial analysis in Excel using Power Query, Power Pivot, and Macros, enabling real-time monitoring of revenue trends, credit utilization, and transaction volumes for finance teams.
- Performed data quality assessments using SQL to cross-validate financial reports with source systems, reducing discrepancies by 15% and ensuring accuracy in revenue reporting, credit risk analysis, and regulatory compliance.
- Contributed to the development of a credit risk scoring system by analyzing historical repayment behavior and credit utilization data, helping segment customers by risk profiles using K-means and hierarchical clustering, which improved risk categorization accuracy by 30%.
- Conducted A/B testing using Python and R to evaluate credit risk assessment strategies, supporting data-driven insights that improved loan approval decisions and reduced default rates.

PROJECTS

Graphical Insights: Language Models for Structured Data Queries and Visualizations

Jan 2024 - May 2024

- Designed and developed a generative AI application to empower non-technical users to interact with and analyze datasets through automated visualizations and natural language queries. Integrated cutting-edge language models such as Code Llama Instruct 34B and Mistral 7B via Hugging Face API and Llama 2 13B through Accure’s SecureGPT API, enabling natural language query capabilities.
