SUMMARY

- **Data Engineer** with **4 years of experience** in designing, and managing data for storage, processing, and analytics, handling data sets up to 50 TB.
- Proficient in **Python, SQL, HiveQL, and Scala** for data engineering and automation.
- Expertise in handling large datasets and real-time streaming with **Apache Spark, Hadoop, Kafka, MapReduce, and PySpark**, processing data.
- Experienced with **AWS, Azure, and GCP** for building scalable, cloud-based data solutions.
- Knowledgeable in **SQL Server, PostgreSQL, MySQL, MongoDB, Cassandra, and Snowflake** for database management.
- Deployed applications using **Docker, Kubernetes, and CI/CD pipelines**, reducing deployment times by 30 minutes.

SKILLS

- **Programming Languages:** Python, SQL, HiveQL, Scala, Unix Shell Scripting
- **Methodologies:** Agile/Scrum, Waterfall
- **Data Modeling:** DAX, Kimball, Star Schema
- **ETL Tools:** Informatica, Talend, SSIS, Apache Airflow
- **Big Data Technologies:** Hadoop, Cassandra, Kafka, Spark, HDFS, MapReduce
- **Data Engineering Tools:** Apache Spark, Kafka, Hadoop, PySpark, Airflow, Databricks, Azure Data Factory, AWS Glue
- **Data Visualization:** Tableau, Power BI, Python Libraries (Matplotlib, Seaborn, Plotly, Dash)
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB, Cassandra, Snowflake
- **Cloud Technologies:** AWS (Redshift, Lambda), Azure (Synapse Analytics, Data Lake, Blob Storage), GCP (BigQuery, Cloud Storage)
- **DevOps Tools:** Docker, Kubernetes, Jenkins

PROFESSIONAL EXPERIENCE

McKesson

Apr 2024 - Present

Data Engineer

MI

- Formulated batch processing applications using Spark APIs and in-memory processing, enhancing data workflow automation and optimizing data handling for over 5 TB of datasets in S3 Data Lake.
- Built and managed 10+ high-performance data pipelines leveraging AWS services (EMR, EC2, S3, RDS, Lambda, Glue, Redshift) to improve analytics, processing times, and data integration.
- Conducted ETL operations using Python, Spark SQL, S3, and Redshift to transform over 10 TB of data into actionable insights, enabling data-driven decision-making.
- Formulated data pipelines using Python for ETL processes, centralizing over 3 TB of data into a unified storage system.
- Implemented AWS orchestration tools like Step Functions, Data Pipeline, and Glue for managing 15+ data workflows and enhancing operational efficiency.
- Applied Hadoop architecture and HDFS commands for query optimization, constructing data pipelines that processed over 1 TB of data per day and boosting processing performance.
- Demonstrated expertise in scalable database systems and real-time/offline analytics tools, contributing to the improvement of 5+ key processes within 6 months.

Hala Infosec

Sep 2020 - Jan 2022

Data Engineer

India

- Leveraged Azure cloud platforms, including HDInsight, Data Bricks, Data Lake, Blob, Data Factory, Synapse, SQL DB, and SQL DWH, to streamline data processing and analytics workflows for over 10 TB of data.
- Established data ingestion pipelines with Spark, Sqoop, and Oozie to transfer data from RDBMS to Azure Data Lake, reducing processing time by 30% for 2 TB of data.
- Crafted and managed 50+ database objects, including tables, views, stored procedures, triggers, and functions using T-SQL to improve data integrity.
- Developed 10+ ETL workflows using Azure Data Factory, Spark SQL, and U-SQL, processing over 500 GB of data into Azure services for actionable insights.
- Administered data across MongoDB, MS SQL, and Azure cloud services using Azure Data Factory, SQL API, and Mongo API to enhance data accessibility.

- Mechanized deployment processes by creating 5+ Jenkins jobs, including pipelines and multi-configuration jobs, reducing build and deployment times by 20% for over 100 deployments.
- Applied Azure Stream Analytics and Event Hubs to process real-time data streams, enabling instant insights for business operations handling 1,000+ transactions per minute.

SagarSoft Inc

Feb 2019 - Sep 2020

Business Intelligence - Data Engineer

India

- Improved BI reporting accuracy by refining data extraction techniques with SQL Server, Azure SQL Database, Salesforce, and Data Warehousing, ensuring precision across 10+ diverse data sources.
- Orchestrated seamless data workflows across systems using Airflow Operators and Python libraries, validating data ingestion processes for 1,000+ data records per hour.
- Employed Azure cloud technologies like Data Factory and Synapse Analytics alongside big data tools to align technical oversight with business goals and innovation initiatives, processing 500 GB of data monthly.
- Systematized ETL workflows using SQL, Power Query, and Python to accelerate reporting cycles, reducing manual intervention for 200+ reports across the organization.
- Deployed 12 data models using DAX and advanced data modeling techniques, enabling complex business and ensuring data reliability across 50+ reports.
- Incorporated data governance and security best practices for cloud-based storage solutions, maintaining compliance with organizational and regulatory standards, handling sensitive data for over 1,000 users.

Cipla

Jul 2018 - Jan 2019

Data Engineer

India

- Harnessed Spark's in-memory capabilities for processing large datasets (over 5 TB) in S3 Data Lake, filtering and loading data into Hive external tables for analytics, optimizing data retrieval.
- Reduced SQL query processing times by 60%, optimizing over 20 complex queries for handling large datasets, cutting execution time to under 2 minutes from 5 minutes.
- Established CI/CD pipelines with Terraform for deployment on AWS infrastructure, automating deployments for 50+ services.
- Led end-to-end architecture and implementation assessments of AWS services, including Amazon EMR and Redshift, for scalable data solutions, supporting 10+ large-scale data operations.
- Transformed datasets using AWS Glue with PySpark, cataloged data using Crawlers, and optimized workflows with Glue's scheduling features, processing datasets of up to 500 GB per job.
- Designed secure and scalable cloud infrastructures using AWS, including EC2, S3, CloudFront, Elastic File System, and IAM configurations, managing access for 500+ users.
- Created IAM policies and configured users and roles for delegated administration and secure access management within AWS, maintaining access control for 100+ services.
- Streamlined data movement between AWS data stores, such as S3 and DynamoDB, ensuring seamless integration and accessibility for 1,000+ records per second.

Data Analyst Intern

- Conducted data analysis using Python libraries (Pandas, NumPy, Matplotlib) and SQL, extracting insights from datasets exceeding 10 million rows to guide strategic decisions.
- Generated 2+ interactive dashboards in Tableau and Excel, presenting trends and insights via graphical tables and charts to 10+ stakeholders across departments.
- Cooperated with 3+ cross-functional teams to convert business requirements into scalable, data-driven solutions, addressing 5+ operational challenges.
- Conceptualized Agile methodologies, including Scrum, by participating in 10+ sprint planning sessions, daily stand-ups, and retrospectives to ensure on-time delivery and continuous improvement.

EDUCATION

George Mason University

Jan 2022 - Dec 2023

Masters in Data Analytics Engineering

Virginia, USA

CVR College of Engineering

Aug 2014 - May 2018

Bachelor of Engineering in Computer Science

India

CERTIFICATIONS

- Jira Fundamentals
- Oracle Cloud Data Management 2023 Certified Foundations Associate
