

NITISH GOVIND BELAGALI

Boston, MA

(857)869-3085 | nitish.belagali@gmail.com | github.com/nitishbelagali/nitishbelagali | linkedin.com/in/nitish-belagali-392646158/

Curious and product-focused data analyst with 3.5 years exp, passionate about end-to-end analytics and building insights that drive business and user value

EDUCATION

- Northeastern University** : *MS in Information Systems* | Boston, USA | GPA: **3.7 / 4.0**Sep 2023 - Dec 2025
- Courses: Data Warehousing and Business Intelligence, Gen AI and Prompt Engineering, Data science, ML.
- KLE Technological University** : *BE in Computer Science* | Hubli, IndiaAug 2016 - Jun 2020

SKILLS

- Scripting LanguagesPython (NumPy, Pandas, Matplotlib, Scikit-learn), Spark, C/C++, Java, R
- Business IntelligenceTableau, PowerBI, MS Excel, Talend, Alteryx, ER Studio, Airflow, Pivot Tables, Spark, VBA, Macros
- Database systemsPostgreSQL ,SQL, Oracle SQL, MySQL, JDBC, MS Azure SQL
- Cloud and Other toolsBigQuery, Azure Data Factory, GitHub, Azure Synapse , JIRA, Confluence, Informatica, Qlik

EXPERIENCE

- Boehringer Ingelheim**, *IT Data Analyst Co-Op* | Danbury, CT, USAJan 2025 - Jul 2025
- Automated weekly export of 50M+ rows from 19 Oracle tables in the SEND Explorer database using Python; reduced manual effort by 90% by implementing compression, archiving, and scheduling via Task Scheduler
- Developed a stakeholder-approved Power BI dashboard for toxicology study profiling with dynamic filters, dosing categorizations, and automated refresh; accelerated stakeholder reporting and reduced manual data slicing by 70%
- Modularized and optimized a complex R Shiny app by separating UI, server, and scoring logic into reusable components; built a scoring engine to evaluate severity across 5+ biological domains using z-score and incidence logic, enhancing scalability and precision
- Partnered with stakeholders to identify friction points and built dashboards, delivering patient insights and enabling data-driven healthcare decisions
- IBM**, *Technical Services Specialist* | Bengaluru, IndiaAug 2021 - Jun 2023
- Optimized ETL scripts and workflows using Informatica, achieving a 45% performance boost and 40% processing time reduction, saving 100 hours weekly. Progress was tracked in JIRA with documentation maintained in Confluence
- Designed data collection strategies with BigQuery, improving real-time data organization, reducing data errors by 50%, and increasing client acquisition by 18%
- Supported Agile implementation, cutting project timelines by 15% and delivering actionable insights that enhanced application quality and user experience
- Accenture**, *Associate Software Engineer* | Bengaluru, IndiaFeb 2021 - Aug 2021
- Implemented Tableau visualization dashboards to analyze database-driven data, resulting in a 25% boost in client satisfaction and a 30% enhancement in decision-making accuracy for a biomedical client
- Utilized advanced data analysis methods within Tableau visualizations to uncover critical trends and patterns, resulting in a notable 20% surge in client revenue and a substantial 35% reduction in operational costs

PROJECTS

- Spotify data pipeline** Personal Project | Boston, USAJun 2025 - Jul 2025
- Built an automated ETL pipeline using Apache Airflow to extract and process Spotify streaming data, improving processing efficiency by 30%
- Designed scalable AWS infrastructure using S3 for data storage and EC2/EMR for compute, enabling high-volume data handling with strong up time
- Applied advanced transformations with Apache Spark and used Snowflake for final storage, reducing query response time by 50% and improving analytics accessibility
- Comprehensive End-to-End Machine Learning Project for Math Score Prediction** Personal Project | Boston, USANov 2024 - Dec 2024
- Set up a Python environment in VSCode and performed EDA on a 2GB dataset (4M rows, 10 columns). Conducted feature engineering and model selection for accurate math score prediction via a custom pipeline
- Trained multiple models (Random Forest, Decision Tree, XGBoost, CatBoost, AdaBoost, etc.); XGBoost achieved the highest accuracy with an R² of 89.5% on the test set
- Automated training and inference pipelines; developed a Flask web app for real-time predictions and deployed it on AWS Elastic Beanstalk, Azure, and Dockerized EC2. Set up CI/CD using GitHub Actions, demonstrating MLOps best practices
- End to End BI Project** Northeastern University | Boston, USAJan 2024 - Feb 2024
- Conducted data profiling and standardization for multi-city accident datasets(Austin, Chicago, NYC) using Alteryx, designed a star dimensional data model with ER Studio, and validated data from REST APIs and XML/JSON to ensure consistency and quality
- Orchestrated ETL processes with Apache Airflow for data cleansing, merging, and transformation, and established a data warehouse in Microsoft Azure SQL. Automated workflows and utilized Git for version control to ensure efficient development and collaboration
- Developed and deployed interactive dashboards in PowerBI and Tableau by integrating data from Azure SQL. Implemented a CI/CD pipeline using Azure DevOps for continuous integration and deployment of ETL processes and BI dashboards

HIGHLIGHTS

- Served as a Teaching Assistant for Fall 2024 in Application Engineering and Design, overseeing and supporting a class of approximately 200 students
- Built a GenAI-powered RAG chatbot for automating doctor appointments scheduling and built AI-driven tools for fitness coaching, personalized diets
