

Nitya Kanthi Nadimpalli

Java Full Stack Developer

(901)337-1873

Memphis, USA

nityakanthinadimapalli@gmail.com

Carrer Objective

To obtain a challenging position as a Java Full Stack Developer with **around 4 years'** experience in a dynamic and growth-oriented organization, where I can leverage my expertise in **Java, Spring Boot, Angular/React**, and database management to design and implement scalable, efficient, and user-friendly web applications, Expertise in **HTML/HTML5, CSS/CSS3, Bootstrap, JavaScript, Type Script, ReactJS, jQuery, JSP, Ajax**, and responsive **UI/UX** design, Strong proficiency in **Java, J2EE, EJB, Servlets, JSP, JSTL, JAX-RS, JDBC**, and **custom** tag libraries. Skilled in creating **RESTful** APIs and microservices with **Spring Boot, Spring MVC, Spring Security, and Hibernate**, Hands-on experience with **Oracle, MySQL, SQL, PostgreSQL, MongoDB, Cassandra, DynamoDB**, and **Spring Data JPA**, Proficient in leveraging **AWS** and **Azure** for cloud-based solutions and **CI/CD** pipeline automation, Expertise in **Maven, Gradle, Log4j, Apache**, and **CI/CD** tools for build automation and deployment, Experienced in **XML, JSON, NodeJS, Express, Spring Data REST**, and **Spring JDBC**.

Technical (I T) Skills

Back-End Development:	Java, Spring Boot, Hibernate, JPA, RESTful Web Services, SOAP
Front-End Development:	HTML5, CSS3, JavaScript, React, Angular, Vue.js
Database Technologies:	Oracle SQL, PL/SQL, Oracle ADF, Database Design, Data Modeling
Tools & Frameworks:	Maven, Git, Jenkins, Docker, Kubernetes, JUnit, Log4j
Development Methodologies:	Agile, Scrum, TDD, Continuous Integration/Continuous Deployment (CI/CD)
Other Skills:	Microservices Architecture, Web Security (OAuth, JWT), Cloud Technologies (AWS, Azure)
Programming Languages:	Java (Core & Advanced), JavaScript, Type Script, HTML5 & CSS3, SQL, JSP (Java Server Pages)
Version Control:	Git, GitHub/GitLab/Bitbucket
Cloud Technologies:	AWS, Azure, Google Cloud Platform (GCP), Cloud-Native Applications
Framework:	Struts2, Spring5, Spring Boot 2.4, Spring Cloud, Spring Security

Educational Details

University of Memphis – Tennessee, USA.

- *Computer Science / Masters*

Professional Experience

Sr. Java Full Stack Developer | Profound Ventures

Texas, USA

Jan 2024 - Present

Description: Profound Ventures is a social entrepreneurship fund dedicated to addressing significant societal challenges, particularly in healthcare, I am building high-performance solutions that aligned with the company's mission, using Java (J2EE, JSP, Servlets, EJB), front-end technologies (HTML5, CSS3, JavaScript, ReactJS), and modern frameworks (Spring Boot, Spring MVC, Hibernate).

Environment: headers, footers, forms, tables, CSS, CSS3, Maven, Junit, TestNG, AJAX, Spring Boot, Servlets, JSP, Spring JDBC, Hibernate, AJAX, Typescript, JavaScript, CI/CD pipelines, Hibernate, Angular, React, or Vue.js, Node.js, JSON

Key Responsibilities

- Java Full Stack Developers use **HTML5, CSS** and **CSS3** to create visually appealing and responsive user interfaces.
- In the **Model- CI/CD pipelines View-Controller (MVC)** architecture, **JSP** typically serves as the **View** component. It's responsible for displaying data to the user, **Maven** integrates with testing frameworks like **JUnit** and **TestNG**
- Integrate **AJAX** calls with server-side Java technologies like **Spring Boot, Servlets**, or **JSP** to retrieve or send data to the server, **Optimizing performance** through the use of **Spring JDBC, Hibernate**, and database connection pooling.
- Design and develop robust, scalable, and secure server-side logic using **Java, J2EE, EJB, Servlets, JSP, JSTL**, and **JAX-RS**.

- Used for manipulating the **DOM**, handling events, and making asynchronous **AJAX** requests to improve the user experience on the client-side, **Typescript**, a superset of **JavaScript**, provides type safety and better tooling support (e.g., auto completion, error detection). It's often used in large-scale applications to improve maintainability and scalability.
- Deploying and managing Java-based applications on hosting web applications and APIs, integrated into **CI/CD pipelines** for building and deploying Java applications efficiently.
- Use **Gradle** to manage project dependencies, including Java libraries and third-party frameworks (e.g., **Spring Boot**, **Hibernate**), Using **ReactJS** to develop dynamic and responsive user interfaces that provide a smooth and engaging experience
- Use **HTML** to create the basic structure of web pages, including **headers**, **footers**, **forms**, **tables**, and other elements.
- **JDBC (Java Database Connectivity)** Use **JDBC** to connect Java applications to **MySQL**, **PostgreSQL**, or other relational databases, Design data models in **Cassandra** that can handle large volumes of data across distributed clusters.
- Create and manage flexible document-based schemas using **MongoDB** for storing structured and unstructured data.
- Integrate **DynamoDB** with Java applications using the **AWS SDK for Java** or **Spring Data DynamoDB**, Use **Oracle** tools like **Oracle SQL Developer**, **Oracle ADF** (Application Development Framework), and **Oracle Web Logic** for application deployment and monitoring, Use **Angular**, **React**, or **Vue.js** to develop modular, reusable, and dynamic components.
- Using **Java DOM (Document Object Model)**, **SAX (Simple API for XML)**, or **StAX (Streaming API for XML)** parsers to extract data from **XML files**, Integrate with cloud-based monitoring and logging tools (e.g., AWS CloudWatch,) Customize **Bootstrap** themes and components to match the application's branding or design specifications, using custom CSS or overriding **Bootstrap's** default styles.
- Develop **RESTful APIs** and services using **Node.js** for efficient communication between the front-end and the database.
- Creating endpoints that return **JSON** responses to the client (e.g., GET /users returns a list of users in JSON format).

Sr. Java Full Stack Developer | M&T Bank

 **Dallas, Texas, USA**

 **May 2023 - Dec 2023**

Description: M&T Bank (Manufacturers and Traders Trust Company) is a prominent regional bank, I collaborated with cross-functional teams to build secure, scalable, and high-performance financial services applications for M&T Bank's customers and internal users, using Spring MVC and JAX-RS, integrated with multiple back-end systems, including Oracle, PostgreSQL, and MongoDB databases

Environment: NoSQL, JIRA, Azure, software GIT, MongoDB, JSP, CSS, JSTL and XSL, java scripts, RESTful, Docker, Kubernetes, hibernate, JSTL, JSP

Key Responsibilities

- Documented **CI/CD** processes and provided training sessions to team members, helping them understand and effectively use the **CI/CD pipelines**, Used **JIRA** tool for Issue/bug tracking, monitoring of work assignment in the system, Developed complex **SQL queries**, stored procedures, and views to support various data processing needs and application features, Design and implementing Model view controller (**MVC**) architecture using **spring** framework.
- Built and consumed **RESTful APIs** and **SOAP web services** with tools like **JAX-RS**, **JAXB**, and **JMS** to enable seamless communication between systems, Collaborated with backend developers to design and integrate **RESTful** and Graph **APIs**, enhancing data flow between the **React** frontend and **Java backend**.
- Implement **CI/CD pipelines** using **Jenkins**, **GitHub Actions**, or **Azure DevOps** for automated deployment and testing.
- Developed **RESTful APIs** using Java and integrated them with front-end frameworks through **Apache HTTP Client** for efficient communication, Develop server-side logic using **EJB**, **J2EE**, and **Servlets** to handle business processes.
- Deploy applications to **Azure App Services**, **Azure Kubernetes Service (AKS)**, or **Azure Functions** for serverless computing, Deploy applications on or **Azure** platforms, leveraging services like **Lambda**, **EC2**, **S3**, and **RDS**.
- Managed application servers like **Apache Tomcat** for deploying Java-based applications in production environments.
- Developed **java scripts** for all client side validation and developed User Interface (**GUI**) using **JSP**, **CSS**, **JSTL** and **XSL**
- Management, Experience in working with **NoSQL** Database like **MongoDB** to manage extremely large data sets.
- Developed **RESTful web services** using **JAX-RS**, **Apache CXF** and spring frameworks and persistence using **Hibernate** and **JPA ORM frameworks**.
- Design, develop, and maintain web applications using **Spring MVC** for efficient request handling and robust back-end architecture, Implement **RESTful** web services using **JAX-RS** to enable seamless communication between distributed

systems, Integrate and manage multiple databases, including **Oracle**, **PostgreSQL**, and **MongoDB**, to support diverse application requirements.

- Created **Docker** images for **Java-based** microservices and ensured smooth deployments in various environments Developed SNMP Manager in WinCE, at the time of development due to the scarcity of the Hardware configuration, the **SNMP** support was not ported in the Board-Support Package's configuration, and hence the **SNMP** was supported using the Socket Programming and **C++** and following the **SNMP** RFC 1157 and Printer **MIB** 1759 specifications

Java Full Stack Developer | Amazon

📍 **Mumbai, India**

📅 **May 2022 - Jan 2023**

Description: Amazon is a global technology and e-commerce company, operates in various industries, including e-commerce, cloud computing, artificial intelligence, digital streaming, and hardware, I am implemented RESTful APIs for seamless communication between frontend and backend components, adhering to industry best practices, using Jenkins, Maven, and Gradle, reducing time-to-market for new features.

Environment: J2EE, JSP, HTML5, Kubernetes, Typescript, Microservices, Akka, CSS3, Selenium, jQuery, Ajax, NodeJS, JavaScript, Kafka, MongoDB, Graph QL, AWS, Spring Boot, Spring, Hibernate, REST, SOAP, MVC, Oracle, SVN, JUnit, JIRA, SCRUM, PCF.

Key Responsibilities

- Used **AngularJS** to create **views** to hook up models to the **DOM** and **synchronize** data with **server as SPA**.
- Developed persistence Layer using **Hibernate** to persist the data and to manage the data.
- Hands-on experience in creating **Docker** containers and **images** and deployed the code using **Docker** and **AWS** Services.
- Used **JUnit**, **Mockito** for Unit testing the **code**, and **SL4J** for logging errors. Likewise worked on **Karma**, **Jasmine** in **Angular** App unit Testing and Protractor for automation. **GIT** for version control.
- Responsible for **Spark** streaming configuration based on type of Input Source Developing business logic using **Scala**. Developing traits and case class's etc.in **Scala**. Extensive experience in Pivotal Cloud Foundry (**PCF**).
- Developed multiple single page applications using **Angular7.0**, **HTML5**, **CSS3**, and **Angular** Material. Worked on **ES6** new features such as **Iterators**, and **Generators**. Involved in designing, capacity planning and implementing multi-rack **Cassandra** cluster. Manage and **fix** bugs with **JIRA** bug tracking application.
- Configured and managed **CI/CD pipelines** using **Jenkins** to automate build, test, and deployment processes for seamless integration and delivery, Created and maintained build scripts using **Maven** and **Gradle**, ensuring consistent and efficient project builds across development and production environments.
- Expertise in **Microservices** developing **SOA** (Service Oriented Architecture) and **J2EE Web Services** based on **SOAP**, **WSDL**, **UDDI**, **JAX-WS**, **JAXB**, **JAX-RPC** using tools like **Apache Axis**.
- Used **HTML**, **XHTML**, **DHTML**, and **Java Script**, **AJAX**, and **Angular 1.x/2**, **JQUERY**, **XML**, **XPATH**, **JSP** and Tag Libraries to develop view pages in portal. Made use of Reactive Forms using **Angular 8.0** where most of the validation is done using component rather than using template-driven which provides in **HTML**.
- Used **AWS Lambda** to manage the servers and run the code in the **AWS** and Automation of various administrative tasks, using existing old **spring MVC** application developed a new application with **Spring Data JPA** Rest.

Java Developer | Cello World

📍 **Mumbai, India**

📅 **March 2021 - April 2022**

Description: Cello World is one of India's leading manufacturers and marketers of consumer products, renowned for its wide range of stationery, home ware, and kitchen products, I implemented core backend functionalities using Java, J2EE, Spring Boot, Spring MVC, and Hibernate, ensuring robust and efficient application architecture

Environment: JavaScript, AJAX, JSP, Servlet, JMS, Spring MVC 3.0, Hibernate 3.0, JSF, SOAP Web Services, Axis2, JPA, Web Logic Application Server, Jenkins, ANT, HTML, SVN, XML, Cloud Foundry, Unix Shell Scripting, SQL,

Key Responsibilities

- Established continuous **integration (CI)** practices and standards using **Jenkins**. Set up **Jenkins** server and build jobs to provide continuous automated **builds** based on **polling** the **Git** source control system during the day and **periodic** scheduled builds overnight to support development using **Jenkins**, **Git**, **JUnit**, **Selenium** and **Maven**.
- Extensive expertise in the **Spring** Framework, with a focus on developing cloud-native software solutions and **leveraging** its core features for scalable and **robust** applications. Involved in writing **Java API** for **Amazon Lambda** to manage some

of the **AWS** services. Provides intermediate level system **analysis, design**, development, and implementation of **UI** and **MTs** for **WEB** and Batch based software. Developed the **UI** with extensive use of **HTML, CSS, JavaScript, JSON** and **Ajax**.

- Design, develop, and deploy scalable, high-performance web applications using Java, J2EE, Spring Boot, Spring MVC, and Hibernate, Implement business logic and server-side functionality using Spring Boot, Spring MVC, and J2EE technologies, Worked on Core **Java** for multi-**threading**, collections and **GUI AWT**, Use **Jenkins** for continuous **Integration** and deployment and **Docker** for **containerization**.
- Worked on Big Data **Integration & Analytics** based on **Hadoop, SOLR, Spark, Kafka, Storm** and **web Methods**.
- Implemented **AJAX** calls from backend without page refresh using **jQuery, AJAX, J2SE, Spring MVC** and **Hibernate**.
- Worked on the modernization of a legacy and outsourced UI technologies used were **Angular 2/4, Angular Materials 2, CSS, Node JS, Express JS**. Involved in setting up the application to run on **AWS** cloud environment on multiple **Ec2** instances. Created even driven jobs using **AWS** cloud tools like **S3, DynamoDB, SNS, SQS** and **AWS Lambda** with **Java**.
- Created various **MongoDB** collections and wrote services to store and **retrieve** user data from for the application on devices and used Mongoose **API** in order to access the **MongoDB** from **NodeJS**.
