SUMMARY

Dedicated Java Full Stack Developer with 4+ years of experience in designing and implementing high-performance web applications using Java, Spring Boot, and microservices architecture. Proven track record of enhancing application performance and scalability through cloud-native development and DevOps practices. Experienced in agile methodologies, CI/CD pipelines, and mentoring junior developers. AWS Certified Solutions Architect with expertise in building resilient and scalable cloud-based applications.

TECHNICAL SKILLS

Programming Languages: Java, Python, C/C++, JavaScript, TypeScript

Front-End: React, Angular, HTML5, CSS3, Node.js

Back-End: GraphQL, Spring Boot, Spring Framework, Quarkus, Micronaut, Vert.x, Hibernate, RESTful APIs

Databases: MySQL, PostgreSQL, MongoDB

Cloud & DevOps: AWS, Azure, OpenShift, Terraform, Docker, Kubernetes, Jenkins, Git

Testing: JUnit, TestNG, Selenium WebDriver, Postman, RestAssured, IntelliJ, Eclipse

Event-Driven & Monitoring: Kafka, ELK Stack, Prometheus, Grafana

Methodologies: Agile/Scrum, CI/CD, Microservices Architecture

EXPERIENCE

Java Full Stack Developer

Jan. 2024 – Present

Confidential

Saint Louis, MO

- Engineered scalable web applications using Java, Spring Boot, and Angular, improving deployment efficiency by 30%
- Led Agile development efforts, reducing project delivery time by 25% through effective sprint planning and execution
- Implemented microservices architecture using Spring Cloud, enhancing application modularity and scalability
- Implemented robust security measures including OAuth 2.0 and JWT for authentication and authorization, enhancing application security posture.
- Optimized database performance using SQL and NoSQL (MongoDB), achieving 40% improvement in query speed
- Developed responsive and accessible user interfaces with React and Angular, increasing user engagement by 20%
- Architected and deployed cloud-native applications on AWS and OpenShift, leveraging services such as EC2, S3, Lambda, and Kubernetes
- Implemented CI/CD pipelines using Jenkins and Docker, reducing deployment time by 50%
- Implemented GraphQL APIs alongside RESTful services, improving data fetching efficiency and reducing over-fetching by 30%
- Mentored junior developers in Java best practices and microservices architecture, contributing to a 20% increase in team productivity
- Utilized Elasticsearch and Kibana for log analysis and monitoring, reducing time to identify and resolve production issues by 50%
- Developed and maintained comprehensive API documentation using Swagger, improving cross-team collaboration and reducing integration issues by 25%
- Utilized Agile methodologies and JIRA for project management, improving team efficiency and on-time delivery by 35%
- Conducted code reviews and mentored junior developers, reducing code defects by 15%

Java Full Stack Developer

Mar. 2023 – Dec. 2023

Saint Louis University

Saint Louis, MO

- Developed and maintained Java-based web applications using Spring Boot and Hibernate, improving system efficiency by 25%
- Designed and implemented RESTful APIs, facilitating seamless integration between front-end and back-end systems.
- Created automated test scripts using Selenium WebDriver and JUnit, increasing test coverage by 40% and reducing manual testing time by 60%

- Implemented unit and integration tests using JUnit and TestNG, identifying 15% of critical bugs pre-release
- Collaborated with cross-functional teams to gather requirements and translate them into technical specifications
- Utilized Git for version control and participated in code reviews, ensuring high code quality and adherence to coding standards
- Implemented event-driven architecture using Apache Kafka for real-time data processing, improving system responsiveness by 40%
- Optimized SQL queries for data validation, increasing test result accuracy by 30%
- Participated in Agile ceremonies including daily stand-ups, sprint planning, and retrospectives, contributing to improved team productivity

Java Developer
Cognizant Technology Services (Client: Discover Financial Services)

May 2020 – Dec. 2022
Chennai, TN

- Engineered robust web applications using Java, Spring, and Hibernate, improving performance by 25%
- Developed RESTful APIs using Spring Boot, facilitating seamless integration with front-end Angular components
- Implemented microservices architecture, enhancing application scalability and maintainability
- Created automated testing frameworks with JUnit and Mockito, decreasing bug occurrence by 30% and improving overall code quality
- Optimized backend processes through performance tuning and code refactoring
- Developed and executed API test scripts using Postman and RestAssured
- Implemented message queuing systems using Apache Kafka, enabling asynchronous processing and improving system scalability
- Utilized Infrastructure as Code practices with Terraform, reducing environment setup time by 50%
- Managed software deployment using Docker and Kubernetes, reducing deployment times by 20%

PROJECTS

- Gateway Pets Adoption Web Application | *REST API, Java, Maven, WordPress, Git***
- Jan. 2024 – Mar. 2024
- Developed a scalable Filter API for Gateway Pets Adoption using Java 11 and Spring Boot 2.5, enhancing pet search functionality and user experience
 - Integrated third-party APIs (ShelterLuv) using RestTemplate and implemented caching mechanisms, improving data retrieval efficiency by 50%
 - Designed and implemented responsive UI components using React and Material-UI, allowing users to filter pets by multiple criteria simultaneously
 - Optimized data parsing and response handling, resulting in a 40% improvement in overall application performance
 - Implemented unit and integration tests using JUnit and Mockito, achieving 90% test coverage
- Microservices-based Inventory Platform | *Java, Spring Boot, Quarkus, Kafka, Docker***
- May 2023 – Aug. 2023
- Developed a scalable e-commerce platform using microservices architecture with Spring Boot and Quarkus
 - Implemented event-driven communication between services using Apache Kafka
 - Containerized microservices using Docker and orchestrated with Kubernetes
 - Set up observability and monitoring using Prometheus and Grafana, improving system reliability by 30%

EDUCATION

- Saint Louis University**
Master of Science in Computer and Information Science
- Saint Louis, MO
Jan. 2023 – Dec. 2024

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate**
- Oct. 2024 – Oct. 2027
-
- Oracle Certified Associate (OCA) Java SE 8 Programmer**
