PROFESSIONAL SUMMARY

Data Analyst with 2+ years of experience delivering data driven solutions across banking, financial services, and enterprise IT. Skilled in collecting, cleaning, and validating large scale datasets from multiple sources, and building interactive dashboards in Power BI and Tableau to translate data into actionable insights. Proficient in SQL for reporting and analytics, with hands on expertise in Python for predictive modeling, automation, and advanced data analysis. Experienced in documenting processes, ensuring data quality, and supporting compliance with industry standards. Adept at presenting findings to stakeholders in clear, compelling narratives and collaborating with cross-functional teams in Agile/Scrum environments to drive strategic decision making. Additional expertise includes cloud platforms (AWS, Azure) and big data frameworks (HDFS, Spark, Hive), with a proven track record of improving operational efficiency, enabling business performance, and delivering high-quality results under tight deadlines.

CORE COMPETENCIES

- Tableau
- Power BI
- R Programming
- ETL Development
- Predictive Analytics
- Matplotlib & Seaborn
- Machine Learning Basics
- Data Cleaning & Transformation
- SQL (MySQL, PostgreSQL, Oracle)
- Python (Pandas, NumPy, Scikit-learn)
- Git & GitHub
- Spark & Hive
- Data Modeling
- Hadoop & HDFS
- Root Cause Analysis
- Feature Engineering
- Data Validation & QA
- Agile/Scrum Methodologies
- Cloud Platforms (AWS, Azure)
- Advanced Excel (VBA, Pivot Tables)

PROFESSIONAL EXPERIENCE

DATA ANALYST *Fifth Third Bank*

02/2024 to Current
Kentwood, MI

- Collected, cleaned, and validated large scale banking and financial datasets from multiple sources, ensuring accuracy and compliance.
- Designed and optimized ETL workflows to integrate enterprise datasets, reducing data latency and improving reporting efficiency.
- Built and maintained interactive dashboards in Power BI and Tableau, driving a 40% increase in stakeholder adoption.
- Wrote and optimized SQL queries to streamline reporting pipelines and cut processing time.
- Developed predictive models in Python (Pandas, NumPy, Scikit-learn) to support fraud and anomaly detection.
- Applied big data frameworks (HDFS, Spark, Hive) to process and validate high volume structured and semi-structured data.
- Leveraged AWS (S3, Redshift) and Azure platforms to enable scalable data ingestion and reporting.
- Automated repetitive workflows with Python scripts, saving 15 analyst hours weekly.
- Conducted root cause analysis, implemented performance tuning, and improved pipeline reliability.
- Documented processes, workflows, and models to ensure compliance and knowledge transfer in Agile/Scrum environments.

Environment: Python, Pandas, NumPy, Scikit-learn, SQL, Power BI, Tableau, AWS, Azure, Spark, Hive, Git, JIRA, Agile/Scrum

DATA ANALYST INTERN *Birla Soft*

06/2022 to 05/2023
Hyderabad, India

- Designed and optimized SQL queries and ETL workflows to integrate operational and financial data into enterprise data warehouses.
- Applied Python (Pandas, NumPy, Scikit-learn) for automation, predictive modeling, and advanced data transformations, improving reporting speed.

- Built and maintained Power BI dashboards to track performance metrics, enhancing visibility into pipeline health and decision making.
- Processed large scale structured and semi-structured datasets using Hadoop, Spark, and Hive, reducing manual validation effort.
- Implemented cloud-based pipelines with AWS and Azure, enabling scalable reporting and distributed team access.
- Conducted data validation and root cause analysis, ensuring 95%+ accuracy in financial and operational reports.
- Automated anomaly detection and feature engineering workflows, supporting early identification of financial risks.
- Partnered with cross functional teams to define KPIs and deliver enterprise level BI solutions aligned with business needs.
- Documented ETL workflows, dashboards, and ML techniques to support compliance, audit readiness, and reproducibility.
- Contributed to Agile/Scrum development cycles, supporting sprint planning, backlog refinement, and iterative analytics releases.

Environment: SQL, Python, Power BI, Tableau, Hadoop, Hive, Spark, AWS, Azure, Git, Agile/Scrum

EDUCATION

Master's: information system technology

Wilmington University

USA

Bachelor's: Electrical and Electronics Engineering

JNTU

India

CERTIFICATIONS

- Microsoft Certified: Data Analyst Associate (Power BI)
- Python for Data Science – Coursera
- SQL for Data Analytics – Udemy
- Introduction to Machine Learning – Coursera
