

## NIVEDITHA MAKAM

Email: [niveditha.makam29@gmail.com](mailto:niveditha.makam29@gmail.com) | Phone: +1 (314)-398-6428 | [LinkedIn](#) | [GitHub](#)

### EDUCATION

**Master's in Computers and Information Science** — Saint Louis University | CGPA: 3.6/4.0

**August 2023 – May 2025**

Coursework: Data Visualization, Applied Analytics, Information Retrieval, AI & ML, Business Statistics, Financial Management

### SKILLS

**Applications:** Power BI, Tableau, SSRS, SSMS, Crystal Reports, Google Data Studio, Jira, Trello, Lucid chart, Fresh Service, Power Query, Power Pivot, Power Apps, MS Excel, MS word, MS Access, DAX, Big Data Technologies, Snowflake.

**Programming:** SQL, Python, R, C, Java, .Net, C#, HTML, JS, CSS

**Platforms:** Power BI Service (SaaS), Cloud Solutions AWS, Salesforce CRM

**Concepts:** Data Modeling, Database management, Dashboard Automation, ETL, Agile Methodologies, Data Storytelling, KPI Analysis, Requirement Gathering, Data Cleansing & Visualization, Financial Analysis, Data Warehousing, A/B Testing, Root Cause Analysis, Customer insights, Business Intelligence, Data Analysis, Business Process Improvement

**Certifications:** Microsoft Power BI Data Analyst, Python for Data Science (IBM), AWS Educate: Introduction to Cloud

### PROFESSIONAL EXPERIENCE

**Data Analyst – Holiday Channel**

**July 2025 – Present**

- Designed and developed interactive Power BI dashboards using DAX measures, calculated columns, and advanced visuals to monitor user engagement, sales performance, and key marketplace KPIs in real time.
- Applied data modeling, correlation analysis, and trend forecasting techniques using SQL, Excel, and Power Query to uncover behavioral patterns and deliver insights that improved personalization, conversions, and customer retention.

**Technology & Transportation Support Assistant — Saint Louis University**

**September 2023 – May 2024**

- Centralized student transit data using Excel and SQL to streamline the Metro Pass distribution system, resulting in a 20% improvement in reporting accuracy and faster eligibility verification.
- Improved pass distribution & transit accessibility using student feedback, increasing public transportation satisfaction by 30%.
- Managed queries via Fresh Service & delivered weekly Power BI & SSRS reports enabling data-driven policy improvements.

**Business Analyst — MyVerkoper, Telangana, India**

**February 2020 – June 2023**

- Designed complex SQL queries and stored procedures enhancing procurement and sales reporting accuracy by 35%.
- Built interactive Power BI dashboards for procurement and marketing departments, reducing manual reporting by 50% thereby improving the decision-making process, optimizing business processes by identifying redundant steps and streamlining workflows, reducing processing time.
- Partnered with engineering teams conducting data-audits, writing test cases, validating system behavior and identifying data inconsistencies which reduced reporting errors by 20%.

### PROJECT EXPERIENCE

**Employability Analytics Dashboard with AI powered chatbot — Saint Louis University**

- Constructed Power BI dashboard with semantic data models & Row-Level Security, by analyzing over 1,000 data points on employment outcomes, salary ranges, and skills in demand, to provide customized views improving decision making by 50%.
- Designed intelligent career advisor chatbot by integrating NLP techniques and LLM with Power BI datasets, used spaCy and Transformer models for named entity recognition and semantic similarity extraction, improving chatbot accuracy by 70%.
- Deployed backend using FastAPI with PostgreSQL, containerized with Docker for scalable AWS EC2 deployment.

**Tourism Economy Dashboard – Excel**

- Developed an Excel dashboard using Power Query and PivotTables analyzing global tourism trends for over 150 countries.
- Leveraged Pandas, Matplotlib, Seaborn for comprehensive data cleaning, exploration, & visualization of survey data. Cleaned over 30,000 rows of raw data, identified 250% increase in tourism receipts and 20% GDP uplift correlation.

**CI/CD Pipeline Design & Optimization**

- Architected CI/CD pipeline using CircleCI, reducing deployment time by 40% and minimizing pipeline errors by 25%.
- Established parallel builds and dependency caching optimizing build efficiency, cutting build times by 50%, resolving integration complexities and significantly improving development throughput. Documented CI/CD workflows and integration logic, increasing the onboarding speed for new developers by 30% and ensuring pipeline maintainability.

**Cost-Benefit Analysis of Marketing Campaigns — SQL & Excel**

- Extracted & aggregated campaign performance data using SQL, segmented by customer demographics and acquisition sources
- Calculated financial metrics including Return on investments, conversion rate, and customer acquisition cost using Excel PivotTables and formulas, increasing reporting accuracy by 90%.
- Proposed budget reallocations based on underperforming metrics, highlighting data-driven decision improvements by 25%.

**Health Survey Data Analysis — R & SQL**

- Conducted exploratory analysis on 40K+ CDC BRFSS records using SQL and R (dplyr, ggplot2), uncovering regional trends in diabetes and hypertension; built a segmentation model (age, BMI, smoking) that improved risk targeting of vulnerable populations by 35%.
