Summary

Software Engineer with 2+ years of experience in building and deploying generative AI models for text, image, and audio using PyTorch, TensorFlow, and Hugging Face. Skilled in Python, Java, LLMs, GANs, VAEs, and integrating AI models into production with scalable APIs.

Education

Kennesaw State University

Master's in Computer Science - **CGPA: 3.8/4.0**

Atlanta, Georgia

Aug 2023 – May 2025

RVR & JC College of Engineering

Bachelor of Technology in Computer Science - **CGPA: 3.37**

Guntur, India

Jun 2019 – May 2023

Technical Skills

Languages: Python, Java, JavaScript, TypeScript

AI/ML: Supervised Unsupervised Learning, GANs, VAEs, LLMs (GPT-3, BERT), Transfer Learning

Frameworks Libraries: PyTorch, TensorFlow, Keras, OpenCV, Pandas, NumPy, Angular

Deployment: Docker, FastAPI, Flask, REST APIs, CI/CD, AWS (EC2, S3, IAM), GCP (basic)

MLOps Tools: Kubeflow, Kubernetes, Git, Jupyter, VS Code, Postman, Linux

Collaboration: Jira, Confluence, Microsoft Teams, Slack

Domains: Generative AI, NLP, Computer Vision, MLOps, Full Stack Development

Certifications: AWS Foundation Certificate, Data Analytics with Python

Experience

Amazon

April 2024 – Present

Software Engineer

Seattle, USA

- Developed and deployed generative AI models using PyTorch, TensorFlow, and Hugging Face for NLP and vision applications.
- Built RESTful APIs with FastAPI/Flask and integrated services with Angular dashboards.
- Automated ML pipelines using Docker, Kubernetes, and Kubeflow on AWS.
- Improved training workflows with feature engineering (Pandas, NumPy) and contributed to CI/CD and MLOps strategy.

Regalix

July 2022 – August 2023

Machine Learning Engineer

Remote, India

- Developed and fine-tuned ML models for predictive analytics using Python, TensorFlow, and PyTorch.
- Collaborated with Adobe research teams to translate cutting-edge AI research into scalable, production-ready solutions.
- Designed and evaluated algorithms for energy load forecasting, improving accuracy through data preprocessing and hyperparameter tuning.
- Built and deployed predictive models using large-scale historical data, applying statistical analysis and feature engineering.
- Created POCs to test AI-driven business solutions and optimized existing ML frameworks for better performance and scalability.

Indian Servers Pvt. Ltd

Feb 2022 – July 2022

Python Developer

Remote, India

- Developed a deep learning model for car brand classification using Python, TensorFlow, Keras, and OpenCV, improving classification accuracy by 65% with ResNet-based transfer learning.
- Built and preprocessed a large-scale labeled dataset, including resizing, normalization, and quality checks for images under 224x224 resolution.
- Integrated machine learning tools with front-end technologies like HTML, CSS, and JavaScript to build a web-based interface for real-time classification.
