SUMMARY

Experienced Software Developer transitioning to Big Data Engineer, with expertise in data processing using Apache NiFi and containerization with Docker and OpenShift. Proven ability in building search indexes with ElasticSearch and optimizing SQL queries for data analysis. Eager to leverage technical skills and agile methodologies to drive data-driven solutions in a Big Data Engineer role.

WORK EXPERIENCE

IDF

Jul 2022 - Mar 2025

Software Developer / Data Engineer

Tel Aviv - Jaffa, Israel

Software Development using C# in a .NET environment, utilizing OOP methodologies. API Development using C# for a multiple data source system, used for data analysis, computations and statistical calculations. Created log data for ElasticSearch using C#, experience with Copilot AI developments tools by using them in VS code and Rider/ ElasticSearch: built search indexes, run various searches via external API, Elastic UI and third party utilities, utilizing Kibanna data visualization. Linux shell scripting. SQL Server: Functions and Stored Procedures development, DB Administration, SQL queries development and optimization, Oracle SQL queries development. OpenShift Pod development and maintenance and various configurations for Development and Production environments. Full Software Development lifecycle using Agile/Scrum methodologies. Apache NiFi: data processing flows development.

- Improved system efficiency and reliability by developing software solutions with C# in a .NET environment, using OOP methodologies
- Designed and implemented C# APIs for a multi-source data system, enhancing efficiency in data analysis, computations, and statistical calculations.
- Created log data solutions for ElasticSearch using C#, utilizing Copilot AI tools in VS Code and Rider to build search indexes, execute queries via external APIs, and improve data accessibility through Elastic UI, third-party utilities, and Kibana visualizations
- Developed Linux shell scripts to automate routine tasks, significantly enhancing operational efficiency and saving time.
- Boosted data processing efficiency by creating and refining SQL Server functions and stored procedures, administering databases, and optimizing both SQL and Oracle SQL queries.
- Developed and maintained OpenShift Pods and various configurations for development and production environments, ensuring system stability and scalability
- Managed the full software development lifecycle using Agile/Scrum methodologies, enhancing team collaboration and project delivery
- Developed data processing flows with Apache NiFi, improving data integration and processing efficiency

EDUCATION

Ami-Asaf High School

2015 - 2021

High School Major, Computer Science

Kfar Sava, Israel

- **Coursework:** Computer Science

SKILLS

- **Programming Languages & Technologies:** C#, .NET, Object Oriented Programming, Application Programming Interface (API), Python, Shell Scripting, Microsoft Transact-SQL (T-SQL), Product Development Procedure Development, JavaScript, CSS, HTML, JavaScript vanilla
- **Databases & Data Management:** Microsoft SQL Server, Oracle Database, Microsoft SQL Server DBA (Database Administration), SQL Server Integration Services (SSIS), Database Administration, Stored Procedures, Query Optimization, SQL Databases, Data Analysis, Data Processing, ElasticSearch database
- **Software Development & Methodologies:** Application Programming Interface (API), API Documentation, Software Development Lifecycle (SDLC), Software Development, Agile Methodology, Scrum Project Management, Software Development, Software Configuration Management, Computer Science, Team Player
- **Tools & Platforms:** Docker, Apache, NIFI, Linux Operating System, Atlassian JIRA, Programming Tools, Grafana
- **Specialized & Other Skills :** consist of Artificial Intelligence (AI), Elastic Search, Data Visualization, User Interface/Experience (UI/UX), Systems Analysis, Environmental Sciences, Object Oriented Programming Methodologies

LANGUAGES

- Hebrew (Fluent)
- English (Intermediate)
