

Obulesh Policherla
Java Full Stack Developer
(940)-735-8416 | [LinkedIn](#)
Policherla.obulesu@gmail.com

Professional Summary:

- **Around 3+ years of experience** in full-stack development, microservices architecture, and cloud-based solutions.
- Expertise in **Spring Boot**, **Spring JPA**, and **RESTful API** design for seamless system integration.
- Designed and implemented **front-end UI** components using **React**, **TypeScript**, and **jQuery UI** to enhance user experience.
- Ensured secure API communication by implementing **OAuth2.0**, **JWT**, and **SSL/TLS encryption** protocols.
- Managed **API gateways** to streamline communication and integration between microservices.
- Integrated into **AWS Lambda** and **API Gateway** for event-driven architecture and workflow automation.
- Developed and optimized **Kafka producers/consumers** for efficient data flow in distributed systems.
- Implemented a modular architecture using **Kafka** and **Spring Boot**, enhancing system performance and scalability.
- Built and managed **CI/CD pipelines** using **Gradle**, **Jenkins**, **Docker**, and **Harbor**, automating deployments.
- Integrated **Elasticsearch** with **Spring Boot** services to enhance search capabilities for order and payment data.
- Deployed microservices on **AWS EC2** using **Docker**, ensuring scalability and high availability.
- Implemented **AWS CloudWatch** for real-time monitoring and proactive issue detection.
- Configured **AWS S3** for secure, scalable storage of order-related documents.
- Processed large datasets using **Apache Spark** and **Kafka**, optimizing data flow and transformations.
- Ensured compliance with **capital market regulations** and handled sensitive financial data throughout the development process.
- Developed **financial reporting dashboards** using **AngularJS** and **Angular 12**, providing real-time data visualization.
- Designed and optimized **MongoDB** architecture, including **sharding**, **indexing**, and **replica sets** for high availability.
- Utilized **Apache Kafka** and **Apache Spark** for distributed data processing and real-time analytics.
- Integrated **Swagger UI** for API testing, reducing manual testing efforts and accelerating the development cycle.
- Proficient in **cloud platforms** like **AWS**, **Azure**, **Google Cloud Platform (GCP)**, and **Pivotal Cloud Foundry (PCF)**.

Technical Skills:

Programming Languages: Java, JavaScript, TypeScript, SQL, PL/SQL, Node.js, Python

Frameworks & Libraries: Spring Boot, Spring JPA, Spring MVC, Hibernate, Flowable BPM, React, Angular (AngularJS, Angular 12), jQuery

Cloud Platforms & Serverless: AWS (EC2, Lambda, RDS, S3), Azure, Google Cloud Platform (GCP), Pivotal Cloud Foundry (PCF)

CI/CD & DevOps: Jenkins, Gradle, Maven, Docker, Kubernetes, Git, GitLab CI

Databases: MySQL, MongoDB, Oracle, SQL Server, Elasticsearch

Data Processing & Messaging: Apache Kafka, Apache Spark, JMS, Azure Data Factory

API Development: RESTful APIs, GraphQL (Apollo), SOAP, JAX-WS, Swagger UI, API Gateway

Security & Authentication: OAuth 2.0, JWT, SSL/TLS, Multi-Factor Authentication (MFA), Spring Security

Testing & Monitoring: JUnit, Mockito, Selenium, Postman, Rest Assured, Jest, AWS CloudWatch

Professional Experience:

Fannie Mae, Dallas, TX,

Jun 2024 - Present

Role: Java Full Stack Developer

Responsibilities:

- Developed and maintained **Stream order and payment processing system** using **Spring Boot**, **Spring JPA**, **Node.js** and **Postman**, creating **RESTful APIs** for seamless integration with downstream systems.

- Designed and implemented **front-end UI components** using **Angular, TypeScript, and jQuery UI**, enhancing **user interaction** and experience.
- Designed, developed, and optimized **business process workflows** using **Flowable BPM**, automating **order and payment processing** for improved operational efficiency.
- Ensured **secure API communication** by implementing **OAuth2.0, JWT, and SSL/TLS** encryption protocols to mitigate risks of unauthorized access and data breaches.
- Practiced **Test-Driven Development (TDD)** to ensure robust, maintainable code by writing unit tests using **JUnit** and **Mockito** prior to feature implementation.
- Implemented and managed **API gateways** to streamline integration and communication between **microservices**.
- Integrated **Flowable** with **AWS Lambda** and **API Gateway**, triggering **event-driven process workflows** based on system actions.
- Built and optimized **Kafka producers/consumers** to process **orders** and **payments**, enabling efficient data flow between services and downstream systems.
- Implemented a **modular architecture** using **Kafka, Spring Boot** and **Node.js**, improving **system performance** and **scalability** for stream-based data handling.
- Developed **CI/CD pipelines** using **Gradle, Jenkins, and Docker**, automating the build, packaging, and deployment process, leveraging **Gradle** as the artifact repository.
- Enhanced **application search capabilities** by integrating **Elasticsearch** with **Spring Boot** services, providing advanced search features for order and payment data.
- Utilized Java multithreading to enhance performance in order and payment processing workflows, ensuring concurrent handling of large volumes of transactions.
- Implemented thread-safe data processing with synchronized blocks and concurrent collections to avoid race conditions in multi-user environments.
- Developed **server-side components and APIs** integrating them with **Spring Boot** and **Node.js**, improving **backend performance**.
- Deployed applications on **AWS EC2** using **Docker**, ensuring **scalability** and **reliability** for order and payment processing.
- Used **Terraform** to provision and manage **AWS infrastructure** as code, including **EC2, S3, IAM roles, Lambda functions, and API Gateway**.
- Created reusable **Terraform modules** for standardizing infrastructure deployment across development, staging, and production environments.
- Implemented **AWS CloudWatch** for real-time monitoring, creating custom **metrics** and **alarms** to proactively detect and resolve system issues.
- Configured **AWS S3** for secure, scalable storage of order-related documents, enabling seamless integration with backend systems.
- Processed and analyzed large datasets using **Apache Spark** and **Kafka**, collaborating with data engineering teams to optimize **data flow** and transformations.
- Developed **Single Page Applications (SPA)** using **React, Spring Boot, and MySQL**, improving **user experience** and **application performance**.
- Integrated **AWS Lambda** with **Python scripts** for **event-driven microservices**, optimizing backend processes and **serverless architecture**.

Environment: Java 17, Spring Boot, Spring JPA, Postman, Node.js, Angular, TypeScript, jQuery UI, Flowable BPM, OAuth2.0, JWT, Multithreading, SSL/TLS, API Gateway, AWS (Lambda, EC2, CloudWatch, S3) Kafka, Gradle, Jenkins, Docker, Elasticsearch, MySQL, Apache Spark, Python.

HCL, Bangalore, IND

June 2021 – Jul 2023

Role: Java Full Stack Developer

Responsibilities:

- Managed **full software development lifecycle (SDLC)** from requirements gathering, design, implementation, deployment, and maintenance on **AWS** using **Agile methodologies**.
- Ensured compliance with **capital market regulations** and handled **sensitive financial data** throughout the development process.
- Utilized **AWS EC2, RDS, S3, and Lambda** to ensure a smooth transition with no disruption in services.

- Developed and optimized **UIs for financial reporting dashboards**, providing **real-time data visualization** using **AngularJS** and **Angular 12**.
- Designed and implemented interactive, responsive **user interfaces** using **HTML5, CSS3, JavaScript, JSP**, and **AngularJS** for enhanced client-side functionality.
- Developed and maintained **RESTful web services** with **Spring Boot**, integrating **financial data providers** and **capital market APIs** with stateless architecture.
- Built reusable **Angular components**, utilizing **Ajax** and **jQuery** to create **dynamic and responsive UIs**, enhancing user experience.
- Optimized **server-side applications** with **Spring Core, Spring ORM, Spring DAO**, and **Hibernate**, ensuring efficient database interaction with **MySQL** and **MongoDB**.
- Designed and implemented **MongoDB sharding** and implemented **indexing strategies** to improve **query performance** and scalability for high-frequency trading applications.
- Developed and managed **MongoDB replica sets** for high availability and failover support in production environments.
- Utilized **Apache Kafka** to design custom **message adapters** for microservices communication, improving scalability and real-time processing.
- Integrated **Apache Spark** for **real-time data transformation** and enrichment, supporting various business use cases.
- Secured capital markets applications using **Spring Security** and implemented **multi-factor authentication (MFA)** and **OAuth** for secure trading systems.
- Integrated **Swagger UI** for seamless **API testing** and validation, reducing manual testing efforts and accelerating the development cycle.
- Created and managed **GraphQL** schemas including **queries, mutations**, and **custom types**.
- Mapped schema to Java classes using tools like **GraphQL Java Tools**.
- Implemented design patterns like **Singleton, DAO, DTO, MVC**, and **Service Locator**, creating a scalable, maintainable architecture.
- Configured **CI/CD pipelines** using **Jenkins**, automated builds with **Maven**, and tested using **JUnit** and **Mockito** to ensure code quality.
- Deployed **microservices** in **Docker containers** on **AWS**, optimizing scalability and availability for capital market applications

Environment: Java 11, AWS (EC2, RDS, S3, Lambda), AngularJS, Angular 12, HTML5, CSS3, JavaScript, JSP, Spring Boot, MySQL, MongoDB, Apache Kafka, Apache Spark, Spring Security, Swagger UI, Jenkins, Maven, JUnit, Mockito, Docker.

Education Details:

Master's degree in computer science University of North Texas

Bachelor's degree in electrical, Electronics and Communications Engineering from Vellore Institute of Technology
