Experience

I. Ocado Technology, Atlanta GA (March 2022 - Present)
IT Operations Shift Lead

- Served as a robotic operator and the point of contact for IT Operations for Ocado systems.
- Partnered with various teams and learned proprietary software to ensure the highest level of production and efficiency for our warehouses and robots.
- Performed remote recovery and warehouse support on our Ocado Smart Platform. Used linux-based terminal to ssh into our robots in order to take control or retrieve specific data from robot. Also, used SCADA system for overview of the entire warehouse and individual stations.
- Supported project managers to assist them with any information technology requests through services such as Jira and Confluence.
- Made contributions in developing strategies for IT-related projects within the company. These included business continuity plans as well as our data backup methodology.

II. Diamax Inc., Atlanta, GA (July 2018 - March 2022)
Systems Administrator

- Responsible for general administrative duties within the cloud-based business suite called NetSuite (Add, modify, retrieve, and delete data).
- Worked closely with the operations and sales teams to provide information, visuals, and reports for meetings, projects and other team collaborations.
- Processed customer orders and created the label for each package before delivery.
- Provided assistance to coworkers for any IT related issues. These issues would include networking issues, troubleshooting devices, connecting phone lines, problems communicating or retrieving information from Netsuite, CCTV set up and positioning, and many more.
- Provided recommendations on IT-related change management in order to uphold the most efficient and secure status.

Education

Kennesaw State University, 2018
B.S. Computer Science

Certifications

- CompTIA Security+
- AWS Certified Cloud Practitioner
- CompTIA CySA+

Skills

- I have been passionate and involved with information technology for over 15 years. In that time, I have learned of many principles and theories, worked with different softwares and technology, and collaborated on projects with professionals as well as peers.

- I am well versed with physical components such as workstations, laptops, mobile devices, and network hardware devices (routers, switches, firewalls, etc). I have used many softwares including Microsoft Office Suite, Google Cloud, Github, Kali Linux, and system components.
- Currently studying for the CISSP, so I am familiar with concepts such as OWASP top 10 vulnerabilities, different security frameworks (ISO and NIST frameworks), and best practices for security professionals (frequent updates and backups). Also learning how to administer software tools such as Burp Suite and MetaSploit for scanning and ethical hacking purposes.
- I am also studying for the AWS Certified Solutions Architect certification. I have been learning more about to the different software solutions that are available to companies upon utilizing AWS services. Utilizing business analysis, solution architects work with companies to identify their greatest needs, then develops and implement a cloud-based solution which will satisfy those company goals.
