PROFESSIONAL SUMMARY

Highly organized and result-oriented Data Analyst with professional expertise in data analysis, data visualization and data reporting. Proficient in Power BI, Tableau, MS Office Suite, SQL, NoSQL Database, Big Query and building dashboards for preparing, processing, and analyzing data sets to be consumed for direct insights, statistical modeling, and other analytical exploration for internal and external clients. Built a couple of interactive dashboards powered by clinical data, financial data, agricultural data, and insurance data.

SKILLS

- **Languages and Application:** Python, SQL, Jupyter, Pyspark, Snowflake, AWS
- **Database and Statistics:** SQL Server, SSAS, SRSS, AWS RDS, NoSQL Database, Big Query, ML Algorithms
- **Collaboration Tools:** Microsoft Teams, Microsoft SharePoint, Microsoft office, Skype, Zoom, Slack, Google Drive, GitHub
- **BI Tools:** Power BI (DAX), Tableau, Qlikview, Oracle BI

PROFESSIONAL EXPERIENCE

Data Analyst

Dataleum | Remote

March 2025 – Present

- Delivered actionable insights by analyzing large-scale datasets with SQL and PySpark, driving product enhancements and business recommendations.
- Designed and deployed interactive Power BI dashboards tracking Daily Active users (DAU)/ Monthly Active Users (MAU) of 10,000+ students, enabling executives to identify correlations between learning behavior and performance.
- Automated recurring reports and ETL pipelines, reducing manual reporting time by 40%.
- Partnered with cross-functional teams to implement scalable cloud-based data solutions (BigQuery, GCP), improving data accessibility and reliability.
- Championed data quality and security best practices, ensuring 99% accuracy across published datasets.

Data Analyst

Meta | United Kingdom

February 2024 –January 2025

- Translated complex HR and people data (headcount, turnover, recruiting metrics) into executive-level dashboards and presentations, enabling leadership to make data-driven workforce strategy decisions that improved retention by 12% YoY.
- Built and optimized SQL queries, data models, and pipelines to automate people analytics workflows, reducing manual reporting time by 30% and ensuring accuracy across multiple business functions.
- Partnered with HR and cross-functional stakeholders as an internal consultant, aligning analytics solutions with business priorities and tracking success of people initiatives through custom KPIs and impact metrics.
- Designed and delivered scalable Tableau dashboards and advanced Excel models (pivots, macros, complex formulas), providing actionable insights to technical and non-technical audiences and driving adoption of analytics tools across the org.
- Led multiple concurrent analytics projects leveraging Python/R for statistical modeling, data validation, and trend analysis, ensuring timely delivery while influencing executive decision-making with clear, story-driven insights.

Reporting Analyst

Davies Group | United Kingdom

April 2022 –January 2024

- Segmented customer base of 50,000+ records using SQL and Power BI, identifying new customer cohorts that improved targeted marketing efficiency by 18%.
- Built anomaly detection reports to flag irregularities in customer data, reducing reporting errors by 25%.
- Consolidated disparate data sources into a centralized reporting system, cutting data retrieval time by 30%.
- Collaborated with product and support teams to translate raw customer data into actionable business intelligence.

- Authored process documentation and delivered training sessions to improve knowledge transfer across teams.
- Engineered ETL workflows with SSIS and SQL stored procedures to integrate multi-source datasets into a centralized warehouse.
- Created KPI dashboards in Tableau tracking operational and financial performance, driving 15% faster decision-making by leadership.
- Automated recurring reports and scheduling, saving 10+ hours per week of manual effort.
- Designed DAX-based visualizations that improved executive visibility into revenue and cost drivers.
- Partnered with executives to translate business goals into measurable KPIs, ensuring alignment between reporting and strategy.

Data Analyst

Ernst & Young | Remote

April 2019 –March 2022

- Maintained and optimized SQL databases, performing large-scale data cleaning and validation that improved reporting accuracy by 25%.
- Designed automated pipelines using Python and SQL to transform actuarial and survey data, cutting processing time by 35%.
- Built and delivered KPI scorecards and performance dashboards (Excel, Power BI) used by 200+ stakeholders, increasing visibility into team productivity and financial performance.
- Conducted exploratory data analysis on high-volume actuarial, agricultural, and financial datasets, uncovering trends and developing predictive models that improved revenue opportunities and increased forecast accuracy for business planning by 15%.
- Centralized disparate datasets into a unified repository, reducing duplication and improving data retrieval efficiency by 40%.
- Produced ad-hoc and compliance-driven reports supporting audits, remediation, and regulatory standards while maintaining strict data confidentiality.
- Designed Excel-based reporting solutions with advanced formulas, pivots, and macros, streamlining operational decision-making across multiple departments.
- Partnered with cross-functional business users to translate data insights into actionable strategies, enhancing decision-making speed by 20%.
- Delivered executive-level presentations and data storytelling, effectively communicating technical findings to both technical and non-technical audiences.

EDUCATION

University of Essex (UoE) | Colchester, England
MSc. Applied Data Science

2023

University of Lagos (Unilag) | Lagos, Nigeria
BSc. Actuarial Science

2019

CERTIFICATIONS

- Career Essentials in Data Analysis (**Microsoft & LinkedIn, 2024**)
- Data Visualization (**EY Analytics, 2021**)
- Applied Data Science I & II (**WorldQuant University, 2020–2021**)
- Python for Data Science (**IBM, 2020**)
