EDUCATION

The George Washington University, School of Engineering & Applied Science Master of Science in Computer Science

Washington, DC
May 2025

- Recipient of SEAS Dean Award.
- Coursework: Design and Analysis of Algorithms, Advanced Software Paradigms, Machine Learning, Neural Networks, Database Systems.

Visvesvaraya Technological University Bachelor of Engineering in Computer Science and Engineering

Belgaum, India
May 2023

- Coursework: Object Oriented Programming, Database management Systems, Artificial Intelligence, Operating Systems, Cloud Computing, Web Development, Data Structures and Algorithms.

TECHNICAL SKILLS

- **Programming Languages:** C, C++, Java, Python, JavaScript, SQL, R, UNIX, Dart, HTML, CSS, Typescript.
- **Frameworks/Libraries:** Scikit Learn, CNN, LSTM, NLP, Tensorflow, Pytorch, Keras, ReactJS, SciPy, NumPy.
- **Software:** Microsoft Excel, Word, Access, Docker, IntelliJ, Android Studio, Visual Studio, R Studio, Git, Jupyter Notebook, Grafana, Azure, AWS.

RELEVANT EXPERIENCE

The George Washington University Summer Research Assistant

Washington, D.C.
May 2024 – August 2024

- Developed a **Python**-based function to map skill groups to a taxonomy for integration into an API that extracts and maps skills from job descriptions.
- Collaborated with a team of 4 to build an AI training dataset, enhancing skills identification using existing skills taxonomies.

Chistats Labs Private Limited. Software Engineer Intern

Pune, India
September 2022 - November 2022

- Leveraged Python, Grafana, InfluxDB, and Telegraf during a 3-month internship, gaining hands-on experience in software development and data visualization.
- Applied **Agile** principles, including weekly project reports and design presentations, to manage the final sprint.
- Implemented an alert system using Python and Telegraf to trigger notifications based on predefined conditions, enhancing system reliability and responsiveness in real-time data monitoring.

TECHNICAL PROJECTS

Project Teammate Finder Web Application

- Developing a web application for finding project teammates using **React.js** for the frontend.
- Implementing REST API for server communication.
- Utilized **MongoDB** as the database, optimizing query performance.

Reservation Platform

- Developed a sports ground reservation web application using JavaScript and integrated OpenStreetMap for interactive mapping.
- Implemented **REST API** for efficient server communication, processing.
- Utilized MongoDB to manage user data and reservations, optimizing data retrieval and performance by 40%.

Food Supply chain using Blockchain

- Led the completion of a final year project on implementing Blockchain technology for the Food Supply Chain.
- Developed a responsive website using **Node.js** and **MySQL** to support the project.
- Project was nominated for best technical projects in the state by the government.

Classification of COVID-19 CT scan images

- Researched and developed a classification system using a Convolutional Neural Network (CNN) framework.
- Achieved a 93% accuracy rate in distinguishing between COVID and non-COVID patients using CT scan images.
- Optimized the model for high performance and reliable detection.

Analysis of Housing Rent Prices in United States

- Acted as a Data Analyst in a team of 4 to develop a web application using R programming language.
- Visualized median rental prices across all counties in 52 states of the U.S., offering comprehensive insights into the rental market.
- Provided valuable data analysis to support informed decision-making for stakeholders.
