Education

University of Maryland, Baltimore County

Aug 2022- May 2024

Master of Science in Data Science

Baltimore, MD

Technical Skills

Programming Languages: Java, C#, C++, Python, JavaScript, TypeScript, Ruby

Frameworks/Libraries: Spring Boot, RESTful APIs, Spring Core, Spring MVC, Hibernate, .Net

Web Technologies: React, Angular, HTML, CSS, jQuery, SOAP-XML, Node.js, NextJS, Redux, Rest API, GraphQL, Bootstrap

Data Management: MySQL, SQL Server, MongoDB, Excel, Power BI, Tableau

Methodologies: Scrum, Agile, SDLC

Project Management: Jira, GitHub, GitLab, Jenkins, Docker

Tools/ IDE's: ServiceNow, Git, Visual Studio, Postman, Google Colab, Jupyter, Spring Tool Suite, Eclipse

Cloud Platforms: Azure, AWS, Google Cloud

Certifications: Data Structures in Java by Coding Ninjas, Career Essentials in Software Development by Microsoft

Experience

OCMBC Inc

May 2024 – Present

Software Engineer

USA

- Developed responsive and dynamic single-page applications using React.js, TypeScript, and Bootstrap 5 for internal and client-facing portals.
- Implemented complex user workflows including form wizards, data tables, and tabbed navigation with reusable functional components.
- Integrated Redux Toolkit with Redux Thunk and custom middleware to manage global state and side effects efficiently.
- Used 'createApi' from Redux Toolkit Query to fetch, cache, and auto-refetch data from REST APIs.
- Collaborated with backend teams to define API contracts and integrated endpoints to handle CRUD operations and async data flows.
- Optimized builds and load time using Webpack for code splitting, lazy loading, and tree shaking in large applications.
- Wrote and maintained unit tests using Jest and React Testing Library, ensuring over 85% test coverage for UI and logic components.
- Followed Git workflows for feature branching, PR reviews, and release tagging using GitHub and Bitbucket repositories.
- Worked in Agile sprints using Jira for backlog grooming, sprint planning, story tracking, and retrospectives.
- Ensured cross-browser and mobile compatibility across all UI components by adhering to responsive design and accessibility standards.
- Mentored junior developers on React patterns, Redux best practices, and component abstraction strategies.
- Participated in daily standups and bi-weekly demos to showcase progress and incorporate stakeholder feedback quickly.

Cognizant Technology Solutions

Dec 2019 – Jul 2022

Software Engineer

India

- Built modular frontend interfaces using React.js and Redux-Saga to manage asynchronous user flows and state updates.
- Developed pixel-perfect, accessible UIs using HTML5, CSS3 (SASS), and Bootstrap for enterprise insurance and finance products.
- Created reusable UI components like accordions, date pickers, data grids, and loaders to standardize design across products.
- Integrated with REST APIs using Axios and centralized error handlers for consistent UI feedback.
- Configured Webpack for multi-environment builds and enabled hot module replacement in dev mode.
- Wrote Jest and Enzyme tests for reducer logic and UI rendering; incorporated test runs into CI pipelines.
- Collaborated with QA and designers to ensure accurate implementation of mockups and user flows.
- Maintained detailed Git histories and managed merge conflicts during concurrent sprint work.
- Worked in a Scrum team of 8, delivering 3–4 story points per sprint and participating in continuous improvement discussions.

Projects

Loan Application Portal – React, Redux Toolkit, Bootstrap, REST APIs, Webpack

- Developed a responsive loan portal with multi-step forms, validation, and dynamic UI elements using React and Bootstrap.
- Used Redux Toolkit with 'createSlice' and RTK Query for state management and async API communication.
- Configured Webpack for optimized production builds with separate vendor and app bundles.
- Wrote unit and component tests with Jest and React Testing Library, achieving 90% coverage.

Document Management Dashboard – React, Redux-Saga, SASS, Karma, Bitbucket

- Created a document workflow dashboard allowing users to upload, review, and track PDF files with real-time API polling.
- Used Redux-Saga for orchestrating API calls, debounced search, and background sync of document statuses.
- Styled components using modular SASS and ensured responsiveness across mobile/tablet devices.
- Ran Karma tests with code instrumentation and used Bitbucket Pipelines for continuous integration.
