SUMMARY

Results-oriented Business Analyst with over 3 years of experience in driving data-informed decisions through advanced analytics, optimized SQL modeling, and powerful data visualizations. Adept at building dashboards in Tableau and Power BI, conducting predictive analysis, and supporting corporate functions like fleet operations, sourcing, and marketing. Proven success in automating workflows using Azure Data Factory and Snowflake, translating business requirements into actionable insights.

SKILLS

- Programming Languages : Python, SQL, R programming
- Data Visualization Reporting: Tableau, Power BI, Executive Scorecards, Dashboards
- Databases and Data Warehousing : SQL Server, Snowflake, DynamoDB, MySQL, MongoDB
- Data Analytics: Data Mining, Predictive Modeling, API integration Risk Identification, Financial Metrics (PL, Cash Flow)
- Data Preparation Tools: Git, JIRA, MS Office, Excel (Advanced)
- Methodologies: Agile, Scrum, SDLC, User Stories, UAT Coordination

WORK EXPERIENCES

Business Analyst

Aug 2021 – Feb 2024

Stanvac systems

India

- Led the Analytics Automation Module using Azure Data Factory, streamlining ETL workflows and increasing data pipeline efficiency by 40%, reducing operational delays.
- Developed a centralized Snowflake-based data warehouse architecture that integrated operational and supplier datasets. Improved data transformation logic and reduced dashboard load time by 30%, while enabling seamless data access across departments.
- Used Excel (Advanced) for financial modeling, variance analysis, and automated report generation tied to Balance Sheets, Cash Flow statements, and forecast simulations.
- Developed an AI-driven Demand Forecasting Module, leveraging historical data and market trends to reduce excess inventory by 15% and align supply with demand.
- Designed and implemented SQL-based data validation processes to identify, analyze, and resolve discrepancies in large datasets.
- Created dynamic and interactive Power BI dashboards to track supplier performance, cost trends, and demand forecasts. The dashboards enabled stakeholders to visualize KPIs, drill into performance metrics, and act on insights with confidence.
- Conducted data validation, anomaly detection, and risk identification using Python scripts across critical production datasets.
- Conducted predictive modeling and regression analysis using R and Python to analyze sales and demand trends. Improved forecasting accuracy by 12% and supported inventory optimization by providing data-driven recommendations to category managers.
- Cleaned, transformed, and validated large datasets from disparate sources. Automated routine data preparation tasks using Python scripts, which led to a 25% improvement in reporting accuracy and reduced manual errors significantly.
- Designed and implemented a Supplier Discovery Module using Python and machine learning algorithms. This solution improved the accuracy and speed of vendor evaluation by automating supplier shortlisting. As a result, manual research time was reduced by 60%.

Management Trainee

Feb 2021 – Aug 2021

Stanvac Systems

India

- Utilized SQL for data-driven analysis and strategy development, enhancing operational efficiency and reporting accuracy.
- Supported the initial design of ML workflows to automate data validation and anomaly detection in supplier databases.
- Developed Tableau dashboards to track key performance indicators (KPIs), providing actionable insights for process improvement.
- Managed project tasks with JIRA and Git, ensuring streamlined workflows in a fast-paced e-commerce environment.

EDUCATION

Master's in Business Analytics

Feb 2024 – May 2025

Saint Peter's University

Jersey City, New Jersey

CERTIFICATES

- * AZ-900 – Microsoft Azure Fundamentals
- * SQL Course in Udemy
- * Python Basics for Data Science in coursera
- * PowerBI certification in Udemy
- * Artificial Intelligence Practitioner – IBM
