

Parimala
Sr. Java Full-Stack Developer

parimala.software@gmail.com | 512-675-0101 | LinkedIn

Professional Summary:

Results-driven **Java Full-Stack Developer** with **6+ years of experience** in building **scalable, secure, and high-performance applications**. Proficient in **Java, Spring Boot, Microservices, and RESTful APIs**, with expertise in **React.js, Angular, and TypeScript** for dynamic UI development. Strong background in **cloud computing (AWS), DevOps (Docker, Kubernetes, Jenkins), and database management (PostgreSQL, MongoDB, Oracle, Redis)**. Skilled in **event-driven architectures (Kafka, Web Sockets), authentication (OAuth 2.0, JWT), and automated testing (JUnit, Mockito, Selenium)**. Experience in **financial and healthcare domains**, ensuring compliance with industry standards like **HIPAA and India PDPB**. Adept at **performance optimization, CI/CD automation, and AI-driven analytics** to enhance application efficiency and reliability.

Technical Skills:

Programming Languages: Java (Java 8 & 11), C, C++, PL/SQL

JavaScript Frameworks: React.js, Redux, AngularJS, Angular 2+, Node.js, Express.js, jQuery

Java/J2EE Technologies: Servlets, JSP, JDBC, JTA, JPA, EJB, Spring Boot, Spring MVC, Spring Security, Spring Batch, Spring AOP, Spring Core, Spring IoC, Struts 2.0/1.0, Hibernate 4.x/3.x

Web Technologies: HTML5, CSS3, Bootstrap, jQuery, XML, JSON

Databases: PostgreSQL, MySQL, Oracle, MongoDB, Cassandra, DynamoDB, Redis

Cloud Technologies: AWS (EC2, S3, RDS, Lambda, API Gateway, Step Functions, SQS, SNS, IAM, VPC, CloudFormation, Kinesis)

Web Services: RESTful APIs, SOAP, GraphQL

Messaging Systems: Apache Kafka, RabbitMQ, JMS (Java Message Service), IBM MQ, Apache ActiveMQ

Web Servers: Apache Tomcat, Oracle WebLogic

Application Servers: Apache Tomcat, WebLogic

Methodologies: Agile (Scrum, TDD), Waterfall

Testing Tools: JUnit, Mockito, Jasmine, Karma, Mocha, Chai, Cypress, Selenium, Cucumber

Version Control: Git, GitHub, GitLab, SVN, CVS, Bitbucket

Build Tools: Maven, Gradle, Webpack

IDEs: Eclipse IDE, IntelliJ IDEA, Spring Tool Suite (STS), Visual Studio

Operating Systems: Windows, Linux, UNIX

Software Tools: Jenkins, Terraform, Docker, Kubernetes, ELK Stack (Elasticsearch, Logstash, Kibana), New Relic, Prometheus

Professional Experience:

PayPal, USA

05/2023-Present

Sr. Java Full-Stack Developer

Responsibilities:

- Designed and developed a real-time transactions management system using Java Spring Boot for backend and React.js with Redux for frontend, ensuring secure transaction tracking, refund management, and fraud detection.
- Integrated RESTful APIs, Web Sockets, and Kafka for real-time transaction alerts and data synchronization across microservices, improving system efficiency and responsiveness.
- Implemented OAuth 2.0 authentication and JWT-based authorization to secure account access, ensuring data privacy and role-based access control with Spring Security.

- Developed a multi-currency conversion module integrating third-party APIs for real-time exchange rate tracking and financial reporting, optimizing international payment handling.
- Engineered an AI-driven fraud detection system using machine learning algorithms, enabling real-time risk assessment and pattern recognition for suspicious transactions.
- Built a React.js-based financial dashboard with D3.js visualization, allowing users to track spending patterns, transaction history, and dispute status interactively.
- Optimized API response times and database performance by implementing Redis caching, PostgreSQL indexing, and pagination strategies, improving scalability and speed.
- Containerized microservices using Docker and orchestrated deployment with Kubernetes, ensuring high availability, auto-scaling, and cloud-native reliability.
- Automated CI/CD pipelines using Jenkins and GitHub Actions, while integrating AWS services including EC2, RDS, S3, Lambda, API Gateway, Step Functions, and SQS for serverless processing and cloud scalability.
- Integrated ELK Stack and Prometheus for real-time logging, monitoring, and alerting, improving system reliability, security, and incident resolution.

Environment: Java 8, Java 11, Spring Boot, Spring Security, React.js, Redux, Node.js, TypeScript, HTML5, CSS3, Bootstrap, JavaScript, RESTful APIs, OAuth 2.0, JWT, PostgreSQL, MongoDB, Redis, WebSockets, Apache Kafka, JUnit, Mockito, Cypress, Selenium, Docker, Kubernetes, AWS (EC2, RDS, S3, Lambda, API Gateway, Step Functions, SQS, Glacier), Jenkins, GitHub Actions, Bitbucket, Prometheus, ELK Stack, Webpack, Babel, JMeter, New Relic, Apache Flink, Kafka Streams, D3.js.

Pragada's Technologies, India

06/2019-09/2022

Full Stack Java Developer

Responsibilities:

- Developed a digital health management system using React.js, Angular, Redux, and Bootstrap for an intuitive and responsive user interface.
- Designed and implemented a microservices-based backend using Java with Spring Boot, Struts 2, and Node.js with Express.js for scalable and maintainable services.
- Created RESTful APIs and integrated WebSockets for real-time patient-doctor communication, appointment updates, and notifications.
- Implemented secure authentication and authorization using Spring Security, OAuth 2.0, and SSO Authentication for role-based access control.
- Developed a telemedicine module with WebRTC for video consultations, AI-based appointment scheduling, and digital prescription management.
- Integrated pharmacy and diagnostic lab APIs for seamless medicine ordering, test scheduling, and automated billing with insurance claims processing.
- Built an event-driven architecture using Apache Kafka to enable real-time messaging between services and maintain system responsiveness.
- Designed and deployed a cloud-native infrastructure using AWS services such as EC2, RDS, S3, API Gateway, Lambda, and CloudFormation for high availability.
- Optimized performance using Redis caching and Elasticsearch indexing, improving search efficiency and reducing database load.
- Developed a mobile application using React Native for patients to access health records, schedule appointments, and receive alerts on the go.
- Implemented CI/CD pipelines with Jenkins, Git, and Maven, along with automated testing using JUnit, Mockito, Selenium WebDriver, and Cucumber.
- Configured Kubernetes and Docker for containerized deployments, enabling auto-scaling and seamless microservices management.
- Integrated AI-driven symptom checker and predictive analytics for early disease detection and proactive healthcare recommendations.
- Designed an emergency response system with geolocation-based ambulance dispatch tracking and real-time doctor availability updates.

- Established disaster recovery strategies, automated backups, and multi-region deployment using AWS CloudFormation and Terraform for infrastructure management.

Environment: HTML5, CSS3, Redux, React JS, Angular, jQuery UI, JavaScript, TypeScript, Bootstrap, Node JS, Express JS, REST API, Load Balancer, Mongoose Connector, MongoDB, PostgreSQL, Oracle R12, Oracle Forms, Oracle Reports, REST administrations, Spring Boot, Spring Security, Microservices, Struts 2, Docker, Mocha, Chai, Jasmine, Karma, JUnit, Mockito, SSO Authentication, OAuth 2.0, Webpack, Selenium WebDriver, Cucumber, Maven, Jenkins, Git, AWS Services (Lambda, EC2, RDS, S3, Kinesis, API Gateway, CloudFormation, SNS, SQS, IAM, VPC), Pivotal Cloud Foundry, Apache Kafka, Terraform, WebSockets, GraphQL, Elasticsearch, Redis.

Intuition Labs, India

05/2018-06/2019

Java Developer

Responsibilities:

- Developed a full-stack billing software using Java 11, Spring Boot, Microservices, and Angular, improving invoice processing and automation.
- Designed and integrated RESTful APIs using Spring REST, API Gateway, and Spring Cloud, ensuring seamless communication between microservices.
- Implemented authentication and authorization using Spring Security and JWT for secure user access and role-based permissions.
- Built an interactive billing dashboard using Angular, JSP, and JSTL, enabling real-time transaction tracking and user management.
- Integrated relational and NoSQL databases, including Oracle, MongoDB, and Cassandra, optimizing data storage and retrieval efficiency.
- Deployed the application on AWS using Lambda, DynamoDB, and WebLogic, ensuring high availability and scalability.
- Used RabbitMQ and Redis for event-driven architecture and real-time billing updates and notifications.
- Developed automated invoice reconciliation and multi-currency support, reducing manual errors in financial transactions.
- Implemented CI/CD pipelines with Maven, GitHub, and Jenkins to automate deployment and testing.
- Configured Apache Server for efficient request handling and load balancing, improving application performance.
- Developed and optimized stored procedures using PL/SQL and JDBC to enhance transaction processing.
- Conducted automated testing using Selenium and JUnit, ensuring reliability across different environments.
- Designed and implemented error handling and logging mechanisms using Spring AOP and Log4J for better system monitoring.

Environment: Java 11, Struts Framework, Microservices, Oracle, HTML, PL/SQL, JDBC, Stored Procedures, WebLogic Application Server, Hibernate, RabbitMQ, Ant, JSP, JSF, JSTL, Apache Server, Angular, Microservices, AWS, API Gateway, Lambda, DynamoDB, Selenium, Web Applications, MongoDB, Redis, Spring Boot, Spring REST, Spring Cloud, Maven, GitHub, Cassandra, NoSQL, RESTful Web Services, AngularJS, Spring IoC Framework, Web Services, EJB, JWT, RabbitMQ Streams, Memcached, Elasticsearch, Logstash, Kibana, WebFlux, Completable Future.

Education

MS in computer science from University of Bridgeport

09/2022-05/2024

B. Tech in Computer Science from NSRIT

07/2015-05/2019
