

PARITOSH KADAM

Los Angeles, California | +1 (323) 641-2785 | paritosh1400@gmail.com | [Portfolio](#)

SUMMARY

Computer Science graduate from USC with hands-on experience in backend development, cloud computing (AWS, GCP), and machine learning. Skilled in building secure, scalable applications using Python, Node.js, Flask, and Angular. Strong in API design, full-stack engineering, and agile collaboration.

EDUCATION

University of Southern California

Aug 2023 - May 2025

Master of Science, Computer Science

Graduated with Master of Science in Computer Science - 3.64/4.0

Vidyalankar Institute of Technology (VIT), University of Mumbai

Jul 2018 - Aug 2022

Bachelor of Engineering, Computer Engineering

Graduated with Bachelor of Engineering in Computer Engineering with Distinction - 9.83/10.0

PROFESSIONAL EXPERIENCE

Priro Systems

Jun 2024 - Aug 2024

Software Engineering Intern

Remote, USA

- Developed secure and scalable firmware solutions for an Excel-based auditing tool, optimising data encryption workflows
- Automated masking algorithms using AWS State Machines and DynamoDB, streamlining secure data handling
- Integrated security layers in ReactJS-based frontend for seamless data visualisation and secure authentication
- Collaborated using Jira for agile sprint planning and Bitbucket for version control and code reviews

TCR Innovation

Sep 2022 - Aug 2023

Artificial Intelligence Intern

Mumbai, India

- Developed a real-time AI chatbot using NLTK and Keras, reducing average response time by 40% and improving user engagement
- Implemented ML models in PyTorch and built PostgreSQL-backed dashboards to visualise insights, improving application accuracy by 15%
- Managed codebase and version control using Git, ensuring streamlined collaboration and regular commits during model iteration

PROJECTS

Stock Search App

- Built a full-stack stock trading application with Angular (web) and Swift/Xcode (iOS) frontend, and Node.js, Express backend, enabling real-time stock searches, trend analysis, and news aggregation
- Integrated portfolio management and trading functionality with MongoDB for user data storage; deployed the app on Google Cloud Platform (GCP) for scalability and high availability

Prediction of COPD Hospital Readmissions

- Published a research paper in IJERT (UGC-approved, ISO 2278-0181) analysing hospital readmission risks using predictive ML models
- Implemented and compared XGBoost, Gradient Boosting, and Weighted Logistic Regression with SMOTE balancing, achieving improved accuracy and recall on COPD patient datasets

College Social Media Application

- Developed a mobile community app for college students using Flutter frontend and Firebase backend, supporting user profile management and real-time data storage
- Implemented key features like college email authentication, private/group chats, community forums, and push notifications to boost student engagement

TECHNICAL SKILLS

- **Languages & Web:** Python, Java, C++, JavaScript, HTML/CSS, SQL, React, Angular, Node.js, Express.js
- **Frameworks & ML:** Flask, Django, Flutter, Swift, .NET, TensorFlow, PyTorch, Pandas, NumPy, Scikit-learn
- **Databases & Cloud:** MongoDB, PostgreSQL, MySQL, SQLite, AWS (EC2, DynamoDB, Step Functions), GCP, Firebase, Docker
- **Tools:** Git, Bitbucket, Jira, Jupyter, VS Code
