EDUCATION

Santa Clara University

Bachelor of Science in Computer Science | Minor in Management and Information Systems

Santa Clara, CA

Received June 2025

• **Relevant Coursework:** Object-Oriented Programming, Theory of Algorithms, Data Science, Linear Algebra, Applied Machine Learning, Web and Data Mining, Data Visualization (Tableau), Operating Systems

WORK EXPERIENCE

Miller Center for Social Entrepreneurship

Data Intern

Santa Clara, CA

June 2024 - June 2025

- Researched select social enterprises from big data to ensure alignment with Bayer Foundation's 2030 business plans.
- Secured strategic partnership agreement that is projected to expand Foundation's global reach by providing sustainable farming solutions in underserved areas by 2030.
- Collaborated on multi-phase project for impact sector taxonomy redesign, classifying 120+ global social enterprises, evaluating existing sector tags, and proposing remapped primary and secondary classifications.

Miller Center for Social Entrepreneurship

Campus Engagement Ambassador (Intern)

Santa Clara, CA

April 2023 - September 2023

- Engaged with 50+ Registered Student Organizations (RSOs) to promote Miller Center Lewis Family Fellowship, internships, and Impact Investment Bootcamp, successfully increasing student awareness and participation in Miller Center programs.
- Imported job posting data from social enterprise dashboards on Salesforce into Miller Center website via WordPress, streamlining job search for Santa Clara University students and alumni.

SKILLS

Programming Languages: Python, SQL, C++, Java, JavaScript, C, Scala, Go, Shell

BI & Analytics Tools: Tableau, Power BI, Salesforce, Microsoft Office (MS Outlook), AWS

Soft Skills: Problem Solving, Analytical Thinking, Communication, Resource Management, Time Management, Collaboration

PROJECTS

[Data Storytelling with Tableau](#)

April 2025 - June 2025

- Analyzed fragmented Airbnb short-term rental listings data (37,000+ listings) in New York City in order to understand pricing accuracy, listing quality, and host activity trends.
- Created 10+ Tableau visualizations, including heatmaps, price deviation LOD charts, and funnel charts, demonstrating that overpriced listings cluster in tourist-dense areas, while stable pricing aligns with long-term host activity.

[Basketball by the Numbers: A Deep Dive into NBA Statistics](#)

February 2025 - March 2025

- Processed and cleaned unstructured NBA 2023-24 players statistics scraped from web sources using BeautifulSoup and Pandas to make certain of data integrity and usability.
- Implemented Apriori, FP-Growth, and CHARM algorithms to identify complex performance patterns, translating raw data into valuable metrics showcasing key player archetypes.
- Developed content-based recommendation system using cosine similarity method to match similar player profiles, generating actionable insights for basketball analysts and researchers on performance trends.

[CropWise: Predictive Agriculture with Machine Learning](#)

January 2025 - March 2025

- Addressed challenge of low crop yields globally by investigating impact of environmental factors on agricultural productivity, seeking to build recommendation system for region-specific crop planning.
- Collaborated with 2 teammates to preprocess and merge datasets (Yield, Temperature, Rainfall, Pesticides), analyze feature importance, cluster regions, build region-specific models, and develop context-based recommendation system.
- Achieved improved R^2 (from 0.49 to 0.87+) by modeling region-specific patterns; delivered interpretable system that recommends high-yield crops by region, aiming to help farmers' decision-making.

[Database Management System - Fashion Retail Business](#)

April 2024 - June 2024

- Proposed hypothetical retail business and described operational and data management inefficiencies as class project.
- Developed solutions to address inefficiencies through data model, such as Entity-Relationship Diagram and converted model into Relational Data Model, later executing SQL queries for generating tables with built-in rules, views, and scripts.
- Finalized relational design, making it easy to add new products, while also allowing for quick reporting and scenario analysis.
