EDUCATION

Masters of Science, Computer Science

California State University (CalState LA), Los Angeles

August 2023 - May 2025

Los Angeles, California, USA

Bachelor of Engineering Computer Science, Honors - Data Science and ML

University of Pune (SPPU), India

August 2019 - May 2023

Pune, Maharashtra, IN

TECHNICAL SKILLS

Programming Languages: Python, C++ , JavaScript

Web Application Tools: JavaScript, Typescript, Django, NodeJS, Express JS, ReactJS, Vue JS, Bootstrap, MERN stack, GitHub

Databases: MongoDB, DynamoDB, SQL

Libraries and Tools: PyTorch, TensorFlow, Sklearn, Pandas, Numpy, OpenCV, Git, Terraform

Cloud Platforms: Microsoft Azure, AWS, Docker, Kubernetes

WORK EXPERIENCE

ONC

March 2025 - Present

Software Developer Intern

Los Angeles, CA, USA

- Develop and maintain dynamic frontend interfaces for **news and blogging platform** with over **2000+ active users** using **JavaScript/ Typescript** and **React.js**, focusing on user experience and performance optimization.
- Working on backend services built using **Node.js and Express.js** and custom **JavaScript** logic to support API integrations and data management workflows.
- Implement and maintain core APIs including **authentication, news, search, and user feed**, ensuring secure and efficient data exchange between frontend and backend.
- Contribute to implementing user **authentication** workflows including login, registration, and session handling, improving application security and accessibility.
- Integrated **SQL** databases to manage user and content data, writing optimized queries to ensure fast access and secure data handling.
- Collaborate with cross-functional teams for end-to-end feature delivery and translate complex **Figma designs** into fully responsive, production-ready web interfaces, participating in code reviews, testing, and iterative development in an Agile environment.

Commous Inc.

January 2021 - December 2021

Software Developer

Pune, MH, INDIA

- Developed and maintained robust RESTful APIs using **Node.js** and **Express.js**, facilitating smooth data exchange between frontend clients, internal services, and third-party systems while ensuring scalability and maintainability.
- Designed and optimized server-side logic to improve data processing performance, implemented reusable service modules, and enhanced inter-service communication across the backend ecosystem.
- Utilized **Docker** to containerize and orchestrate backend services, creating consistent development and production environments while enabling scalable and fault-tolerant deployments.
- Implemented automated deployment workflows using Docker Compose and scripting tools, accelerating the CI/CD pipeline and reducing manual intervention during release cycles.

PROJECTS

- [Drivers Drowsiness Detection System](#), Developed and implemented a driver drowsiness detection system using **deep learning models** for real-time monitoring. Integrated facial recognition algorithms to enhance road safety by triggering alerts during driver fatigue, deploying the system in a test environment.
- [Snippet Application](#), Designed and developed a Snippet Application using the **MERN** stack. Implemented user authentication, data security features, and integrated **automated test cases** to ensure platform stability and security. Utilized APIs for data retrieval and submission, enhancing usability and functionality across multiple platforms.
- [Credit Score Classification](#), Developed a credit score classification system using **Python** and advanced machine learning algorithms, including Logistic Regression, Decision Trees, and Support Vector Machines. Designed unit and functional tests to ensure model reliability, integrated the system with cloud-based data pipelines for scalability, and enhanced model interpretability to assist in risk assessment decisions.
- [Online Retail Platform](#), Developed a full-featured online retail platform using Python and Django, incorporating advanced security protocols for transactions and integrating **payment gateways** for a smooth customer experience. Built automated testing suites and implemented microservices for optimized scalability and responsiveness.
