Summary

Software Engineer with 3+ years of experience in API development, database design, and building scalable software solutions. Proven ability to manage the entire software development lifecycle from design to deployment. Strong problem solving skills and experience with Agile methodologies, cloud platforms (AWS/GCP), and performance optimization. Seeking to leverage technical expertise and analytical skills to drive business success.

Technical Skills

Languages: Java, Python, C, React, JavaScript, Node, HTML/CSS, C#.

Cloud: AWS (S3, Glacier, DynamoDB, EC2, Lambda, SNS, SQS, CloudWatch, Route53), Microsoft Azure, GCP

Developer Tools and Platform : IntelliJ, VS Code, Postman, Git, Google Firebase, Docker, Jenkins, Jira.

DataBase: DynamoDB, MySQL, MongoDB, PostgreSQL.

Technologies and Frameworks: Spring framework, REST API's, Flask, Django, Bootstrap.

Software Engineering: Requirements Gathering, Project Planning and Estimation, Agile Methodologies.

Experience

Amazon

July 2022 – Feb 2025

Software Development Engineer - Java, React, DynamoDB, AWS, Git.

Arlington, Virginia

- Oversaw the end-to-end delivery of complex systems and applications, serving as the technical lead and ensuring adherence to best practice engineering standards throughout the project lifecycle.
- Proposed and implemented process improvements that reduced physical labor by 45% and saved 30% of time for Amazon Fulfillment employees, increasing operational efficiency.
- Developed a system that identified and consolidated different types of error messages into a single unified message, improving time efficiency by 30% and reducing manual work by 20%.
- Redesigned and refactored legacy code to enhance the recommendation algorithm, improving end-user suggestions for similar interests by 25% and optimizing overall system performance.
- Participated in code reviews, delivering constructive peer feedback to improve code quality. Conducted comprehensive end-to-end integration testing, ensuring seamless deployments and minimal production issues. Contributed to design reviews, collaborating with team members to ensure the delivery of high-quality, scalable solutions.
- Effectively resolved high-severity customer tickets during on-call rotations, achieving a 70% reduction in ticket backlog. Managed customer onboarding, facilitated feature request prioritization, and collaborated with cross-functional teams (including Engineering, Product, and Support) to ensure successful deployments and smooth product integrations.

Samarpan Infotech

January 2020 – October 2020

Software Engineer - Python, React, Flask, MySql, Postman, Git, GCP.

Ahmedabad, Gujarat

- Successfully collaborated and communicated across cross-functional teams, ensuring alignment and driving project success in a collaborative team environment.
- Developed high-quality, maintainable code with comprehensive test coverage, leveraging modern abstractions, frameworks, and best practices to ensure reliability and performance.
- Implemented a data streaming system using Apache Kafka to handle large-scale data streams, resulting in a 75% reduction in data processing time and improved system efficiency.
- Developed and implemented RESTful APIs to facilitate seamless data integration and communication between systems. Using data handling techniques to process and manage large datasets and applied data analytics to derive actionable insights, improving decision-making and business outcomes.

Education

University of North Carolina Charlotte

January 2021 – May 2022

Masters of Science in Computer Science

Charlotte, North Carolina.

Gujarat Technological University

June 2015 – May 2019

Bachelor of Engineering in Computer Engineering

Ahmedabad, Gujarat.
