

DARSHAN PATEL

Data Scientist

PA | (814) -990-7137 | darshanpa23@gmail.com

SUMMARY

Data Scientist with four years of experience in machine learning and data analysis; proficient in Python, SQL, and C++, with expertise in TensorFlow and PyTorch. Developed predictive analytics models for financial risk, achieving 95% accuracy while reducing processing times by 30%. Promoted at Amazon within two years due to significant contributions to model deployment efficiency across cloud platforms AWS and GCP.

SKILLS

Methodologies: SDLC, Agile/Scrum, Waterfall
Programming: Python, SQL, C++
IDEs: PyCharm, Jupyter Notebook, VS Code
ML/DL Frameworks: TensorFlow, Keras, PyTorch, Scikit-learn, XGBoost, LightGBM
Data Processing: NumPy, Pandas, SciPy, Matplotlib, Seaborn
Deep Learning: CNN, RNN, LSTM, GAN
NLP: NLTK, SpaCy, BERT, GPT-3, Transformers
Cloud: AWS, Azure, GCP
Dev Tools: Git, Docker, Kubernetes, Apache Airflow
Data Visualization: Tableau, Power BI
Other Skills: Feature Engineering, Model Evaluation, Hyperparameter Tuning, A/B Testing, Data Cleaning
OS: Windows, Linux

Education

Masters in Information Technology Gannon University, Erie, PA	August 2022 - May 2024
Bachelor of Engineering in Information Technology Government Engineering College Modasa	March 2017 - March 2021

EXPERIENCE

Cardinal Health, PA| Novmber 2023 – Current | Data Scientist

- Facilitated Agile/Scrum team collaboration, reducing project delivery times by 20% and expediting the creation of financial risk models while ensuring compliance with industry standards.
- Engineered and optimized machine learning models using TensorFlow, Keras, and PyTorch; achieved 95% accuracy in predictive analytics for credit risk assessment while enhancing model precision through feature engineering techniques by an additional 35%.
- Leveraged Python, SQL, and C++ for data analysis and optimization, reducing pipeline processing times by 30% to support real-time transaction monitoring, while integrating Apache Spark to improve large-scale financial data processing by 30%.
- Spearheaded NLP applications using SpaCy and BERT, enhancing customer sentiment analysis accuracy by 20% and improving insights for customer experience, coupled with interactive dashboards in Tableau and Power BI that enabled 15% faster decision-making.
- Conducted rigorous testing protocols post-deployment on both platforms (AWS/GCP), identifying bottlenecks which resulted in fine-tuning processes; findings helped eliminate three major causes of latency observed previously.
- Implemented MLOps frameworks with MLflow and Kubeflow, streamlining model integration and deployment, improving monitoring capabilities, and enhancing real-time risk assessment, leading to a 40% boost in deployment efficiency.
- Simplified in-depth model evaluations, analyzing over 1 million transactions monthly, refining compliance-focused performance metrics, and surpassing industry benchmarks in accuracy and reliability.

Orion Technolab, India| July 2019 - August 2022 | Data Scientist

- Designed and deployed deep learning models, including CNNs and LSTMs, achieving 90% classification accuracy for image and time series analysis in software applications.
- Developed NLP models with GPT-3 and Transformer architectures, improving text generation accuracy by 15% for chatbots and virtual assistants.
- Optimized data processing workflows using Pandas and NumPy, reducing data cleaning time by 30%, and enhanced predictive model accuracy with XGBoost and LightGBM, achieving a 20% improvement in cross-validation scores.
- Leveraged Azure for cloud storage and computation, cutting data retrieval and model training times by 20%, while modernizing ETL pipelines with Apache Kafka for real-time data ingestion.
- Enhanced AI model deployment efficiency with MLOps strategies, utilizing Docker and Kubernetes for scalable software integration and improved operational reliability.
- Created interactive dashboards with Seaborn and Matplotlib, improving real-time data reporting by 30% and facilitating data-driven decision-making in software development.
- Streamlined collaboration using Git for version control, Generated A/B testing to drive five major software updates in six months, and reduced model development time by 25% with PyCharm and Jupyter Notebooks.

PROJECTS

Smart-Eye| Machine Learning, Deep learning, Python, OpenCV, IOT

- Led a team created a smart device that helps visually impaired individuals navigate surroundings using AI, image processing, and sensor technology. Combined CCTV, microphones, and other sensors to provide real-time spatial awareness. Through research and testing, Fine-tuned the system for accuracy. The project was well-received at academic forums for innovation and positive social impact.

AI-Enhanced Diagnostic Instruments and Sensors: Pioneering Tools for Space Medicine

- led the integration of AI with diagnostic tools to tackle unique challenges in space medicine, designing and testing AI-powered instruments under simulated space conditions. These tools demonstrated improved accuracy, speed, and malleable, enhancing astronaut health monitoring and care. Beyond space, innovations have promising applications for advancing healthcare on Earth. Also advocated the role of AI in shaping the future of space medicine, emphasizing potential impact on both manned space missions and terrestrial healthcare.
