Software Engineer

Detail-oriented and motivated Computer Science graduate with hands-on experience designing and developing cloud-native, scalable, and secure applications. Skilled in AWS (S3, Lambda, Event Bridge, SageMaker), full-stack web development with React, Spring Boot, and C#, and automation with Python and Alteryx. Exposure to Docker and Kubernetes. Passionate about delivering maintainable, high-performance software solutions while collaborating across teams and following Agile-friendly development practices.

Projects

Deal Vault – Real-Time Food Price Comparison Platform:

- Developed a full-stack web application to compare food item prices across Uber Eats, DoorDash, and Pickup options with dynamic cart-based total computation and delivery fee thresholds.
- Engineered a scalable backend using Spring Boot and MySQL with RESTful APIs for price retrieval, business rules, and background menu syncing via JSON/OCR-based updates.
- Built a responsive React frontend with modular components and a real-time price footer for side-by-side delivery fee and ETA comparison.
- Integrated Tesseract OCR using Python to extract menu data from restaurant images and conditionally update the database based on content changes.
- Designed delivery logic simulation without API access, emulating platform behavior with configurable fees, thresholds, and estimated delivery times.

AWS SageMaker ML Automation Project

- Designed and deployed a serverless batch prediction pipeline using Amazon S3 event triggers, AWS Lambda, Amazon Event Bridge, and SageMaker Canvas, automating dataset ingestion and prediction generation.
- Utilized Amazon Bedrock Claude within SageMaker Canvas Dataflow for automated data enrichment and feature engineering, enhancing model input quality.
- Configured SageMaker Canvas Automatic Batch Prediction to execute upon dataset updates, with results stored in S3 for downstream consumption.

Automation Projects (Automation Anywhere & Alteryx)

- Built RPA bots for data retrieval (Yahoo Finance) and automated reporting in Excel with timestamps and conditions.
- Designed Alteryx workflows to transform, join, and visualize structured datasets, producing client-ready reports.

Professional Experience

API Technical Intern, Voulay LLC

09/2025 – Present

- Work with React.js for frontend development and implement Firebase Authentication for secure user login/signup.
- Assist in setting up and managing Firestore Database and Firebase Storage for user data and assets.
- Contribute to UI components such as dynamic forms and password visibility toggle.
- Support deployment and maintenance of the application on Firebase Hosting.

Graduate Engineer, University of Bridgeport, Bridgeport, CT

01/2024 – 04/2025

- Developed and deployed AWS workflows (S3, Lambda, EC2) and supported dashboard development.
- Processed and optimized datasets using Python (Pandas, NumPy) and SQL for reporting.
- Assisted in testing, debugging, and building a chatbot with OpenAI GPT and Flask for academic queries.

Skills

Programming & Web Development: ReactJS, HTML, CSS, Python, JavaScript, Java Spring Boot, C#, SQL, REST APIs
Cloud & DevOps: AWS (S3, Lambda, Event Bridge, SageMaker Canvas), Docker, Kubernetes (Beginner), Terraform
AI/ML (Explored): TensorFlow, PyTorch, Hugging Face Transformers
Automation & Tools: Alteryx, Automation Anywhere, UiPath, Git, MATLAB, Tableau, Power BI

Certifications & Achievements

Academic Achievement Award – Highest GPA in M.S. Computer Science, Class of 2025
Alteryx Designer Core and Foundation Micro-Credential, Microsoft Foundational C#, AWS Academy, UiPath (In progress)

Education

Master of Science in Computer Science (GPA:3.95/4.0), University of Bridgeport, Bridgeport, CT 04/2025
